Ploughing and sowing of all lands in progress in almost all the States. Agricultural stock, fodder and water sufficient. Price of rice varying from 6 seers in Rairakhol, Athmallik and Athgarh, and 6½ seers in Mourbhanj to 11 seers in Talcher and 12 seers in Patna.

* The report is for the week ending the 30th June 1908.

GENERAL SUMMARY.—Rain was general throughout the Province. The fall was heavy in Murshidabad, Cuttack, Angul, Puri, Sambalpur, Ranchi, Manbhum and Singhbhum, and also in parts of Burdwan, Nadia and Jessore; in Bihar it was light. The rain received has been sufficient in Lower Bengal, Orissa and Chota Nagpur for the crops, but more rain is still wanted in Bihar for the sowing of *bhadoi* crops, especially in Champaran and Darbhanga. Weeding of jute and sowing of *bhadoi* crops is still going on. Sugarcane is doing well. Paddy seedlings and jute have been damaged to some extent by recent heavy showers in Midnapore, Hooghly, Howrah, Nadia and Jessore. Damage has also been done to the early sown crops in Angul. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. The price of common rice is stationary in most districts. It has risen in Burdwan, Hooghly and Saran, and has fallen in the 24-Parganas, Jessore, Balasore, Ranchi, Palamau and Manbhum. Cattle disease is prevalent in Shahabad, Bhagalpur, Sambalpur, Hazaribagh and Ranchi. The fodder and water-supply for the Province is fairly sufficient. The test-works in Bankura, Nadia, Murshidabad, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 11,510 persons. Gratuitous relief was given to 24,443 persons, of whom 16,064 were in Orissa.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 30th June 1908.

N. N. BANERJEI,
for *Offg. Director of Agriculture, Bengal, on tour.*

	Inches.
The mean pressure of the seven days	29·493
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·521
	Hours.
The total number of hours of bright sunshine	25·0
The maximum possible number of hours of sunshine	94·3
	°
The mean temperature of the seven days	82·6
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	84·6
The extreme variation of temperature	14·6
The maximum temperature	91·1
	Miles.
The highest velocity of the wind in one hour	14
	%
The mean relative humidity	88
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	84
	Inches.
The total fall of rain from 21st to 27th June 1908	2·30
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·51
The total fall from 1st January to 27th June 1908	29·71
The average fall of the corresponding period for 24 years, Surveyor-General's Office	20·70

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark, gloomy; d, drizzling rain; p, passing temporary showers.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
ALIPORE (CALCUTTA), *the 29th June 1908.*

O. W. PEAKE,

RESOLUTION ON THE REPORT OF THE SANITARY COMMISSIONER, BENGAL, FOR THE YEAR 1907.

MUNICIPAL DEPARTMENT—SANITATION.

Darjeeling, the 29th June 1908.

RESOLUTION—No. 661T.—San.

READ—

The Report of the Sanitary Commissioner, Bengal, for the year 1907.

READ ALSO—

The Triennial Report on Vaccination in Bengal for the years 1905-1906 to 1907-1908.

Lieutenant-Colonel F. C. Clarkson, I.M.S., was in charge of the Department throughout the year 1907, and the present reports are submitted by him.

2. *Climatic conditions.*—The total rainfall of the year was below the normal throughout the Province, except in Orissa, where it was abnormal. It was not, however, so much the shortage in total fall that adversely affected the people as the very unequal distribution, and the cessation of rain at an unusually early date.

3. *Births and Deaths.*—Excluding the district of Angul, to which the system of registration of births and deaths has not yet been extended, the number of births registered in the Province was 1,905,425, as compared with

1,885,745 in the preceding year, or 37·70 per mille of population, against 37·32 per mille returned in 1906. The total number of deaths was 1,906,192, as compared with 1,823,243 in the previous year and an average of 1,749,995 in the five years 1902—1906. The ratio of deaths per mille was 37·72, against 36·08 in the previous year and 34·63, the average of the previous quinquennium. In remarkable contrast with these figures are those returned for the jails of the Province, in which the death-rate per mille decreased from 24 in 1905 to 17·5 in 1907. The jail statistics testify, as the Inspector-General of Prisons has stated, to what can be done by persistent and common sense attention to sanitation. The largest increase in deaths occurred under fever, cholera and plague. The Sanitary Commissioner attributes the rise in mortality to the greater unhealthiness of the year. He remarks that the very high prices of food grains that prevailed affected general health in many districts by compelling the poorer classes to have recourse to unsuitable food which lowered their vitality, so as to render them more susceptible to fever and other prevailing diseases and more liable to succumb to them. On the other hand, the fact that the total number of deaths from fever was considerably less than in 1905, the increase in the total number of births and the figures of infant mortality tend to show that these causes did not operate universally. The experiment of testing the accuracy of the vital statistics was continued throughout the year in certain parts of the Burdwan district, with the usual result, viz., that in a number of cases the entries as to the cause of death were found to be inaccurate.

4. *Cholera.*—The mortality from cholera was the highest recorded since 1901, the total number of deaths reported being 205,702, against 192,596 during the preceding year, and 138,999, the average of the previous quinquennium. The Sanitary Commissioner attributes this rise in mortality in a great measure to the pollution of the water supply and to the use of unwholesome food by the poorer classes in consequence of the high prices prevailing. The disease was most virulent during the last five months of the year, especially in September. While no part of the Province enjoyed complete immunity, the districts of Champaran, Darjeeling, Sambalpur, Singhbhum and Ranchi were comparatively free from the disease. Orissa suffered most severely, the three districts of Cuttack, Balasore and Puri together reporting more than one fourth of the total deaths in the whole Province. From the Cuttack district alone, 31,805 deaths were reported, of which three-fourths occurred during the months of August, September and October, when the insanitary conditions that supervened on the heavy floods must have largely conduced to the spread of the disease. The Lieutenant-Governor notices with satisfaction that the treatment of wells with permanganate of potash was successfully adopted in many parts of the Province and that the people are gradually learning to appreciate this method of disinfection.

5. *Plague.*—There was a rise in the mortality from plague, as compared with the previous year, the number of deaths recorded being 83,602, against 59,619 in 1906 and 126,084 in 1905. As usual, the disease was most prevalent from January to May. More than 90 per cent. of the total number of deaths occurred in the Patna Division, the districts worst affected being Saran (30,007 deaths), Patna (21,858 deaths), Shahabad (10,067 deaths) and Gaya (7,645 deaths). Evacuation of houses continued to be the measure chiefly relied on, and most largely resorted to, by the people themselves; but there are indications that the prejudice against inoculation is gradually weakening, though this measure is still regarded with disfavour by the great mass of the people. In Calcutta 3,123 persons, and in the rest of the Province 2,766 persons, were inoculated, as compared with 101 and 1,777, respectively, in the previous year. Chemical disinfection has practically been abandoned. Rat extermination as a preventive measure was carried on in several places with comparative success, the incidence of plague being less severe than in other localities where no such measures were taken. During the year the Lieutenant-Governor convened a special conference to consider the most appropriate lines of action in view of the experience of the last ten years; and, as a result, a special leaflet was drawn up by the

Sanitary Commissioner and distributed, after translation into the several vernaculars, throughout the plague affected portions of the Province. Sir Andrew Fraser was gratified to find that in the Saran district an attempt had been made to enlist the sympathies of the people themselves on the side of remedial measures, by taking advantage of the new Chaukidari Union System and enrolling the Presidents and the members of these Unions as local committees for the purpose. His Honour would like to see similar methods adopted in this respect in other districts, with a view to working through the local leaders of the people themselves, and in mutual confidence.

6. *Fever.*—The total number of deaths from fever was 1,171,540, as compared with 1,182,579 in 1906 and 1,214,487 in 1905. Even allowing for the tendency to report as due to fever deaths from various other diseases the symptoms of which cannot be correctly diagnosed by the local chaukidars, this mortality, which represents upwards of 60 per cent. of the total deaths from all causes, must be regarded as very serious. The districts which suffered most were Birbhum, Purnea, Palamau, Nadia, Monghyr and Murshidabad, which recorded a mortality, respectively, of 38·27, 36·96, 33·19, 32·38, 32·02 and 31·23 per mile. Calcutta and Puri again showed the smallest proportion of deaths from this cause. Looking to the different Divisions, Bhagalpur now heads the list with a ratio of deaths per thousand of 30·40, while Orissa (12·18) as usual stands quite apart with scarcely half the average ratio for the whole Province. The spread during the year of a malignant type of fever like a wave over the Birbhum district calls for special investigation; and the Lieutenant-Governor awaits the result of the enquiry which is to be made by the Deputy Sanitary Commissioner, Metropolitan and Orissa Circle, during the ensuing fever season. The seriously high mortality that has been reported during successive years from the Purnea district also demands the special attention of the Sanitary Commissioner. Among urban areas, Murshidabad has shown the highest mortality for the last three years in succession. The Sanitary Commissioner should, during his next visit to this town, enquire fully into the complaint made by the Civil Surgeon that no means have been provided for draining the pits and hollows by the side of the new railway embankment. The anti-malarial measures referred to last year continued to be carried on in a systematic manner at Ranaghat and Jagdispur and in certain selected areas of the North Barrackpore Municipality. The Lieutenant-Governor is pleased to learn that several Municipalities have, at the Sanitary Commissioner's suggestion, undertaken anti-malarial measures, in many cases with useful results.

7. The report of the Drainage Committee, appointed by Government to investigate the prevalence and causes of malaria and to what extent it is due to obstructed drainage, was received during the year, and the orders of Government passed thereon. Action has already been taken in respect of most of the recommendations made. The Government of India has just sanctioned the deputation of a special I.M.S. officer for the purpose of conducting a systematic and continuous enquiry into the causes of malaria and the extent to which it prevails; while the question of creating a special engineering division for the examination of the drainage conditions of specified areas is still under the consideration of that Government. The Lieutenant-Governor has sanctioned a scheme prepared by the Inspector-General of Civil Hospitals for the deputation of a large number of selected Civil Hospital Assistants during the fever season to distribute medical aid in specially malarious tracts. A leaflet containing instructions for self-treatment with quinine, and stating where the pice packets can be obtained, has recently been widely distributed in English and in the vernaculars. His Honour desires to invite the attention of the Sanitary Commissioner to the account, given in paragraph 63 of the annual Report on the Jails in this Province for 1907, of the excellent results achieved in the jails by administering doses of quinine during the fever season. Sir Andrew Fraser considers that this and other experience point to the expediency of the Sanitary Department making an earnest effort to popularise as widely as possible the use of quinine as a febrifuge amongst the mass of the people. The question of adopting special measures in this direction will be taken up

separately in consultation with the Sanitary Commissioner and the Inspector-General of Civil Hospitals.

8. *Dysentery and Diarrhœa.*—The number of deaths registered under this head was 51,670, against 48,920 in the preceding year. As remarked by the Sanitary Commissioner, the causes which contributed to cholera also helped to swell the death-rate from these diseases. As usual, the Orissa Division showed the heaviest death-rate and the Bhagalpur Division the lightest. Of individual districts, Howrah again heads the list, a position which it has maintained since 1902. No attempt has been made to assign any reason for this coincidence.

9. *Respiratory diseases.*—The total mortality from this cause was 15,039, against 12,825 in 1906. There has been a gradual increase under this head during the past few years, which is most probably due to more careful reporting. The largest number of deaths was, as usual, returned from Calcutta (5,007).

10. *Injury.*—During the year 25,283 deaths were reported under this head, against 26,695 in 1906, and an average of 24,366 in the five years 1902-1906. Of these, 3,170 were due to suicide, 1,571 to wounds, 11,327 to accidents, and 9,215 to snake-bite. In 18 districts 215 cases of snake-bite were treated, 17 with antivenene and 198 with permanganate of potash. With the former mode of treatment 70 per cent. of cases were successful, and with the latter over 88 per cent. ended in recovery. These results must be regarded so far as they go as highly satisfactory; and the Lieutenant-Governor warmly approves of the recommendation made by the Sanitary Commissioner that permanganate lancets should be widely distributed throughout the districts, so that persons bitten by venomous snakes may be able to avail themselves of the treatment without undue delay. The Sanitary Commissioner will be requested to submit separate proposals, with an estimate of cost, towards this end. Though the mass of the uneducated population still have faith in the charms and incantations of *ojhas* and quacks, still if it can be demonstrated to them that the lancet treatment is infinitely more efficacious they will gradually take to it

11. *Sanitary Improvements.*—Sir Andrew Fraser has read with pleasure the account given in section IX of the report of the action taken by District Boards and Municipalities in the promotion of sanitary measures. The large increase in expenditure of over four lakhs of rupees by municipal bodies under important heads of sanitation is evidence of the growing interest taken in these matters. In view of the large number of septic tank installations that have been set up in the riparian Municipalities, Government has recently decided to appoint a special Inspector, whose duty it will be to inspect these installations periodically, and take samples of the effluent for bacteriological examination.

12. *Sanitary Board.*—During the year the Sanitary Board prepared preliminary estimates for water supply schemes for Burdwan and the Akra Brick Factory, and detailed estimates for a scheme for Puri and for remodelling the Bhagalpur scheme. The detailed scheme for a water-supply for Monghyr was also completed during the year. The details of the Gaya water supply scheme were under preparation. Besides these, eleven drainage and three water-supply schemes for various Municipalities were considered by the Board. Among the former, the most important were the Hooghly-Chinsura, Howrah, Puri and the Nawi and Sunthi Rivers Drainage projects. The last named, which is estimated to cost nearly 6 lakhs of rupees, has been taken up under the Bengal Sanitary Drainage Act. The tract of country to be benefited by the scheme comprises an area of 70 square miles, and includes the Barasat Municipality. The water-works schemes were for Darjeeling, Howrah and Kurseong.

13. *Vaccination.*—The report on vaccination is for the triennial period 1905-1906 to 1907-1908, and is a record of steady progress, notwithstanding the prevailing high prices and the consequent reluctance on the part of poorer classes to offer their children for vaccination owing to their inability to pay the fees. In Cuttack vaccination has, under the Lieutenant-Governor's orders, been given free during the current year to those unable to pay for it. Several useful reforms were introduced into

the Vaccination Department during the triennial period under review, which have tended to better work and greater efficiency. The pay of the subordinate inspecting staff has been increased; arrangements have been made to give the inspecting and vaccinating staff instruction in the most approved modern methods of vaccination at selected centres; and the system of granting rewards to vaccinators has been generally introduced. Antiseptic vaccination has been employed throughout the province; and the change has been attended with satisfactory results. In order to prevent the deterioration of lymph which was noticed last year, the lymph is now supplied direct to the vaccinators from the Calcutta Depôt. On account of the abnormally high mortality from small-pox in Orissa, special measures have been adopted for pushing vaccination, and a Special Inspector has been appointed for the Division.

14. The Lieutenant-Governor's acknowledgments are due to Colonel Clarkson and his subordinates for their administration of the Department; and His Honour notices the good work done by Captain Munro in connexion with certain special enquiries.

By order of the Lieutenant-Governor of Bengal,

C. E. A. W. OLDHAM,

Secretary to the Govt. of Bengal

RESOLUTION ON THE ANNUAL REPORT ON THE REFORMATORY SCHOOLS FOR THE YEAR 1907.

GENERAL DEPARTMENT—EDUCATION.

Darjeeling, the 2nd July 1908.

RESOLUTION—No. 1316T.—G.

READ—

The Annual Report on the Reformatory Schools at Alipur and Hazaribagh for the year 1907.

The number of boys admitted to the Reformatory Schools rose from 95 in 1905 to 146 in the year under review. In accordance with the orders of Government contained in paragraph 4 of Resolution No. 977, dated the 11th July 1901, the Boards of Management examined the lists of admissions with the object of ascertaining whether there were any cases which could have been more suitably dealt with under the provisions of section 562, Criminal Procedure Code, or section 31 of the Reformatory Schools Act (VIII of 1897). As a result of this scrutiny, 7 boys were released from the Alipur School; but in the case of the Hazaribagh School no exception was taken to the decisions of the convicting courts. The judicial returns for the year under review show that 396 youthful offenders were discharged on probation under section 562, Criminal Procedure Code; while 45 were released after admonition or made over to their guardians under section 31 of the Reformatory Schools Act. The corresponding figures for 1906 were 282 and 60 respectively. The Lieutenant-Governor is pleased to note that Magistrates are making more use of their powers under section 562, Criminal Procedure Code. The number of boys in the two schools at the close of the year was 416, viz., 207 at Alipur and 209 at Hazaribagh. Of these 260 were Hindus, 139 Muhammadans, 9 Christians, and 8 aborigines.

2. The number of admissions to hospital rose from 61 in 1906 to 118 in 1907 in the case of the Alipur School, and from 58 to 114 in the case of the Hazaribagh School. At Hazaribagh chicken-pox and malarial fever were the principal cause of this increase. These diseases were also prevalent among the general population of the town of Hazaribagh. At Alipur beri-beri broke out in an epidemic form on the 5th September. The total number of cases was 50 with 2 deaths. There is every reason to believe that the disease was not brought about by the condition of the school, but was introduced from outside. The sanitary arrangements of the school were as good as circumstances allowed, and the food and water-supply were both excellent. The unsatisfactory character of the cubicles, however, probably assisted in the propagation of the disease. The evacuation of the cubicles and worksheds and the removal of the boys into camp prevented further spread of the epidemic, which died out on the 8th of November. The proposal to remove the Reformatory to Hazaribagh has since been sanctioned by the Government of India. The amalgamation of the two schools will shortly be carried out, and it can confidently be expected that the health of the boys will improve in the better climate of Hazaribagh. There was no death in the Alipur Reformatory School except the two from beri-beri, and the only death in the Hazaribagh School was due to accidental drowning. There was again a distinct and satisfactory improvement in discipline, the number of punishments falling from 201 to 113. This improvement is especially marked at Hazaribagh, where the figures fell from 149 to 54. There was no remarkable variation in the number of marks obtained by the boys for good conduct and industry, and their average earnings were very much the same as in the previous year. Due attention was paid to physical drill and gymnastics at both the schools. At the Alipur School the band continued to make satisfactory progress, and lessons in fire drill and in first aid to the injured were regularly given during recreation hours.

3. As regards general education the results in both schools were satisfactory. At Hazaribagh 19 boys reached the upper and 25 the lower primary standard. At Alipur the upper primary standard was abolished,

but 38 boys passed the lower primary stage. At this school additional optional instruction in Bengali and Hindi was provided in the case of Indian boys, and in English in the case of European and Eurasian boys and of such Indian boys as had passed the lower primary examination and were working as compositors. The general instruction of the boys was tested by half-yearly and yearly examinations, and the Head Master of the Calcutta School of Art examined the drawing classes, which were attended by 16 boys. The Lieutenant-Governor is glad to notice that two boys are now being taught type-writing. The arrangements for the religious teaching of the Hindu, Muhammadan and Christian boys were satisfactory.

4. As usual the boys were instructed as far as possible in their caste trades, agricultural work being taken up at Hazaribagh and industrial work at Alipur. At the latter school arrangements for the examination of the industrial work were further improved; and the classes were divided into elementary, intermediate and advanced. Out of 209 boys in the school, 135 appeared at the industrial examination and 101 passed. This result is exceedingly satisfactory. At the Hazaribagh School good progress was made in farming and market-gardening, the average number of boys under training rising from 79 in 1906 to 104 in 1907.

5. During the three preceding years 166 boys were discharged from the Alipur School and 157 from the Hazaribagh School. Out of 144 who had learnt trades at the school enquiries show that only 36 are following such trades, while 47 are following other callings. Of the 157 Hazaribagh boys, 103 had been taught agriculture, but it has been found that only 52 out of this number are following that pursuit. These figures cannot be considered satisfactory. It is hoped that the scheme for the improvement of the agricultural classes at Hazaribagh which is now under the consideration of Government will lead to better results in this respect. Of the 323 boys released from the two schools, 223 were found to be leading honest lives, the figures for Hazaribagh being slightly better than those for the Alipur School. It must be remembered however that at Alipur a more difficult class of boys has to be dealt with. It is gratifying to notice that good progress has been made in the efforts to trace discharged boys, only 49 out of the total of 323 remaining untraced.

6. During the year under review, the number of boys under license from the Alipur School was 56 as against 49 in the preding year. Of these only 3 ran away from their employers and only 2 were sent back to school for misconduct and laziness. At the end of 1907, only two boys were out on license from the Hazaribagh School as against 23 in the preceding year. The Director of Public Instruction will be asked to explain why more use was not made of the license system at this school.

7. The question of providing better means for securing the welfare of boys discharged from the reformatory schools has recently been under the Lieutenant-Governor's consideration. It is hoped that a system will shortly be introduced under which regular allowances will be paid for a term of 3 years to well-behaved boys after their release. The payment of these allowances will make it easy to keep in touch with the boys, and will, it is hoped, reduce the number of failures. It is also proposed to appoint a special staff to visit released boys from time to time, to watch their careers, and to help them to find honest employment.

8 It is probable that the failure of the boys to follow the trades in which they have received instruction in the schools is due to some extent to defects in the method of surveillance. The appointment of a special supervising staff with knowledge of and sympathy for the boys should be productive of great good, if their work is assisted by the practical interest and support of local zamindars and capitalists.

By order of the Lieutenant-Governor of Bengal,

H. C. STREATFEILD,

Offg. Secretary to the Govt. of Bengal,

WEATHER AND CROP REPORT.

For the week ending the 6th July 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	Burdwan ...	1·10	7	7	Rainfall at Katwa 0·37, Kalna 1·52, and Raniganj 0·17 inches. Rain immediately wanted for seedlings. Weather slightly cloudy. Weeding of jute and early rice going on. Condition of jute and sugar-cane fair. Fodder and water sufficient.
2	Birbhum ...	0·17	7	6¾	Rainfall at Rampurhât 0·38 inch. Weather seasonable. Ploughing of fields continuing. More rain wanted for sowing of paddy. Prospects of sugarcane not good. Fodder and water sufficient.
3	Bankura ...	0·93	6½	7	Rainfall at Vishnupur 1·07 inches. Weather seasonable. Transplantation of winter rice going on. Sugarcane doing well. Recipients of gratuitous relief—362 men, 953 women and 339 children—total 1,654. People attending four test-works on the 3rd—45 men, 54 women and 1 child—total 100. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 5 to 6½ seers a rupee in the affected tracts.
4	Midnapore .	3·58	6	6	Rainfall at Contai 1·05, Tamluk 0·71 and Ghatal 1·68 inches. Sowings of broadcasted paddy finished. Transplanting begun. Jute in Ghatal only 25 per cent. of the normal area sown. *Bhadoi* crops almost completely sown. Common rice selling at 7½ seers per rupee at Contai and Ghatal and at 6 seers at Tamluk.
5	Hooghly ...	3·30	7	6	Rainfall in the district general. Weather cloudy. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Condition of jute, sugarcane and vegetables fair. No cattle-disease. Fodder and water sufficient.
6	Howrah ...	3·62	6½	7	Sky cloudy. Weather still unsettled. Considerable damage to crops by recent rain. Paddy being resown in lands from where the water has been drained off. Condition of agricultural stock good.
7	24-Parganas	4·41	7¾	7½	Weather seasonable. Rain sufficient everywhere. Common rice selling at 6½ seers per rupee at Barasat, 6¾ seers at Basirhat, 7¾ seers at Diamond Harbour and at 7 seers at Barrackpore.

* The report is for the week ending the 27th June 1908.

GENERAL SUMMARY.—During the week under report, heavy showers fell in Sambalpur, the 24-Parganas, Cuttack and Puri, as well as in Midnapore, Hooghly, Howrah, Hazaribagh and Ranchi. The fall was moderate in Nadia, Jessore, Gaya, Darjeeling and Angul, and in the rest of the Province, it was light. Sugarcane is doing well. Weeding of jute still continues Sowings of *bhadoi* crops and of *aghani* paddy are still going on, but they are being retarded for want of rain in many parts of Bihar. More rain, it is reported, is still wanted for paddy sowings in Burdwan, Birbhum and Palamau. In Purnea, the standing crops are withering for want of moisture Damage has been done to crops by the late rainfall in Howrah. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. The price of common rice has risen in Bankura, Howrah, Patna, Gaya, the Sonthal Parganas and Puri, and has fallen in Birbhum, Hooghly and Angul. Elsewhere, in the Province, it is stationary. No anxiety is felt for the supply of fodder and water. Cattle-disease prevails in Monghyr, Bhagalpur, Ranchi, Palamau and Manbhum. The test-works in Bankura, Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 18,528 persons. The total number of persons gratuitously relieved was 24,749 which included 16,887 souls from Orissa.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 7th July 1908.

	Inches.
The total fall of rain from 28th June to 4th July 1908	3·56
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·48
The total fall from 1st January to 4th July 1908	33·27
The average fall of the corresponding period for 24 years, Surveyor-General's Office	24·18

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and Thermograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, thunderstorm.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
ALIPORE (CALCUTTA), *the 6th July 1908.*

C. W. PEAKE,
for Offg. Director-General of Observatories.

WEATHER AND CROP REPORT.

For the week ending the 13th July 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
1	BURDWAN ...	Inches. 14·36	7	7	Rainfall at Kalna 3·77, Katwa 11·81, and Raniganj 5·03 inches. Some damage done to jute by heavy rain in thanas Jamalpur and Raina. Condition of sugarcane good. Sowing of *aman* paddy still going on. Water and fodder sufficient. No cattle-disease.
2	BIRBHUM ...	7·97	7	7	Rainfall at Rampurhât 9·93 inches. Weather seasonable. Ploughing of fields and sowing of paddy continuing. Fodder and water sufficient.
3	BANKURA ...	2·63	6½	6½	Rainfall at Vishnupur 5·72 inches. Weather seasonable. Cultivation in progress. Standing crops doing well. Recipients of gratuitous relief—312 men, 895 women and 317 children—total 1,524. People attending test-works on the 10th—3 men and 4 women—total 7. People getting sufficient works in the field. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 5 to 6½ seers a rupee in the affected tracts.
4	MIDNAPORE ...	5·64	6	6	Rainfall at Contai 1·73, Tamluk 8·33 and Ghatal 5·91 inches. Transplantation begun. Sowings finished except in Contai. Sowing of *bhadoi til* nearly finished. No cattle-disease. Scarcity reported from Pataspur and Ramnagar thanas. Common rice selling at 7½ seers per rupee at Contai, 6 seers at Tamluk, and at 7 seers at Ghatal.
5	HOOGHLY ...	9·67	6½	7	Rainfall at Serampore 11·56 and Arambagh 5·24 inches. Weather cloudy. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute *aus* and sugarcane fair. Weeding of jute and *aus* paddy going on. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	7·86	6½	6½	Weather unsettled. Resowing operations going on in fields from which the water has been drained off. Agricultural stock in a fairly good condition. No cattle-disease. Fodder sufficient.
7	24-PARGANAS	8·23	7¾	7¾	Weather seasonable. Rain sufficient everywhere. Common rice selling at 6½ seers per rupee at Barasat, 6¾ seers at Basirhat, 7¾ seers at Diamond Harbour and at 7 seers at Barrackpore.
8	NADIA ...	5·03	6½	6¾	Rainfall at Ranaghat 3·70, Chuadanga 8·00, Meherpur 14·36 and Kushtia 8·40 inches. Prospects of *aus* paddy, jute and sugarcane good. *Aus* paddy damaged by excessive rain in Meherpur subdivision and jute on low lands. Transplantation of *aman* paddy continuing. Prices of staple food-grains slightly fallen. Stocks of food-grains insufficient. Scarcity apprehended. Condition of agricultural stock good. Fodder barely sufficient. Persons attending test-work on 5th—2,450 men and 98 women—total 2,548. Casual relief being distributed.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	8·42	7	7	Rainfall at Kandi 7·39, Lalbag 10 67 and Jangipur 3·05 inches. Weather hot and cloudy. Prospects of standing crops good. Lands being cultivated for *aman* paddy. Transplantation of *aman* paddy going on in Kandi, where high floods affected the crop to some extent. Stocks of food-grains apparently not sufficient till next harvest. No cattle-disease. Fodder and water sufficient. Agricultural stock in fairly good condition.
10	JESSORE ...	8·86	7	7¼	Rainfall at Jhenidah 7·61, Magura 7·05, Narail 16·74 and Bangaon 3·60 inches. Weather rainy. Fall generally sufficient. Damage done to *aus*, and *aman* paddy and to jute in the Sadar, Jhenidah, Magura and Narail subdivisions by the recent rain. Stocks of food-grains getting exhausted. Burma rice being imported. Condition of agricultural stock good on the whole. Fodder sufficient. No cattle-disease. High prices continuing. 221 persons employed on District Board test-works and 2,809 persons given gratuitous relief.
11	KHULNA ...	8·24	8½	8½	Rainfall at Bagerhat 14·04 and at Satkhira 8·49 inches. Rainfall general. Weather seasonable. Prices of staple food-grains stationary. Stocks of food-grains sufficient till next harvest. No apprehension of famine at present. *Aus* paddy and jute affected to some extent by the heavy rainfall of the week. Fodder and water sufficient. No cattle-disease.
12	PATNA ...	2 18	7¼	7½	Weather hot and cloudy. Rain urgently wanted for sowing *bhadoi* paddy. Sugarcane doing well. Prices almost stationary. Food-stocks likely to be sufficient if not largely exported. Condition of cattle good. Fodder and water sufficient. *Makai* not available.
13	GAYA ...	0 44	8* 8½†	8* 8½†	Weather cloudy with showers; and hot after. Rainfall almost general, but scanty at the Sadar subdivision. Sugarcane promising well. Transplantation of *marua* almost finished. Sowing of *bhadoi* crops and paddy seedlings continuing. Prices stationary. Fodder and water for cattle sufficient. Cattle-pox reported from one village in the Aurangabad subdivision.
14	SHAHABAD ...	0 24	8 10†	8 10†	Rainfall at Buxar 6·22, Bhabua 2·00, Sasaram 2·59 and Dehri 0·55 inches. Sugarcane doing well. Sowing of *bhadoi* crops in progress, but more rain urgently wanted for paddy seedlings, especially in the south of the district. Prices of food-grains stationary. Food-stocks under normal but sufficient if not exported. Agricultural stock normal. Fodder and water sufficient.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.

		Inches.			
15	SARAN ...	2·53	7¾ 10*	8 10½*	Rainfall at Siwan 0·51 and at Gopalganj 4 33 inches. Weather hot. Sowing of *bhadoi* crops nearly finished. *Marua* being transplanted. Rain wanted for paddy and *bhadoi* crops. Prices of staple food-grains almost stationary. Food-stock resources external. No apprehension of scarcity. Agricultural stock good. No cattle-disease. Fodder and water sufficient.
16	CHAMPARAN ...	1·25	8 11*	8 11*	Rainfall at Bettiah 4 54 inches. Weather hot and cloudy. More rain wanted. Weeding of maize and ploughing and sowing of rice going on. State of jute fair. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
17	MUZAFFARPUR	2 23	8½ 10¼*	8½ 10¼*	Weather seasonable. Rainfall at Hajipur 3·29 and at Sitamarhi 3·08 inches. Prospects of standing crops generally good. Common rice and maize selling at 7¾ and 9¾ seers per rupee respectively at Hajipur, and at 8 and 11 seers a rupee respectively at Sitamarhi. Sowings of *bhadoi* crops and transplantation of paddy and *marua* going on. Agricultural stock in good condition. No cattle-disease reported. Fodder and water sufficient. Scarcity not apprehended.
18	DARBHANGA ...	2·85	8¼ 11½*	8¼ 11½*	Weather hot and at times cloudy. Some rain during the week, but not everywhere. More rain urgently needed. *Bhadoi* and paddy crops being sown. No apprehension of scarcity. Stocks sufficient. Fodder and water available. Cattle-disease reported in five villages in Benipati thana.
19	MONGHYR ...	1·09	7 9*	7½ 9½*	Weather seasonable. Sowing of *bhadoi* in progress. More rain wanted. Fodder and water sufficient. Rinder-pest in two village of Tegra thana.
20	BHAGALPUR ...	0·40	8 5/16 12⅝*	8 5/16 12⅝*	Weather hot; at times cloudy. Standing crops benefited by the recent rain. More rain wanted. Transplantation of paddy undertaken at places. Prospects still favourable. Cattle-disease reported from two villages in Supaul subdivision.

* The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers per rupee. This week.	Price of common rice in seers per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
21	PURNEA ...	Inches 0 50	8	8	Weather hot and sometimes cloudy. Standing crops suffering for want of moisture. Paddy seedlings dying in many places. Transplantation retarded for want of rain. Condition of agricultural stock good. No apprehension of scarcity yet. Growth of jute becoming stunted on account of drought. Fodder and water sufficient. Cattle-disease reported from one village in Kadwa thana. Common rice selling at $8\frac{1}{2}$ seers per rupee at Araria and at 9 seers at Kishanganj.
22	DARJEELING ...	5·18	7 10*	7 10*	Weather seasonable. Hills—Maize growing and being harvested. Potatoes being harvested. *Chota marua* and *bhadoi* paddy being sown. Winter rice and *bara marua* being transplanted. Terai—Cultivation of winter rice going on. Standing crops fairly well. Agricultural stock in good condition.
23	SONTHAL PARGANAS.	9·22	$6\frac{7}{8}$ $9\frac{1}{8}$*	$6\frac{1}{4}$ 9*	Rainfall at Deoghur 7·19, Godda 5·63, Jamtara 4·77, Pakour 3·63 and Rajmahal 1·97 inches. Ploughing and sowing going on. Transplantation commenced in places. Cultivation of jute continuing. Prospects of crops favourable but more rain wanted in Rajmahal. Prices of staple food-grains almost stationary. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity, although the poorer cultivators feeling the effect of the general high prices. Fodder and water sufficient.
24	CUTTACK ...	1·57	$7\frac{3}{8}\frac{3}{4}$	$7\frac{7}{8}$	Rainfall at Jajpur 0·96, Kendrapara 1·30, Banki 1·30 and False Point 2·62 inches. *Beali* paddy and jute being weeded and growing well. *Saradh* paddy growing and *mandia* being transplanted. *Arhar*, early cotton, turmeric and sugarcane growing. Fodder and water sufficient. 705 men, 1,704 women, 3,788 children—total 6,197—given gratuitous relief. 255 men, 475 women, 678 children—total 1,408—on test-works.
25	BALASORE ..	0·83	7	$7\frac{1}{2}$	Rainfall at Bhadrak 3·19 inches. Weather seasonable. Sowing, puddling and transplanting of *saradh* paddy continuing. Sugarcane and *ashu* plants thriving. Weeding of jute continuing. Stocks of food-grains insufficient. Scarcity existing in some places of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal and Basta thanas. 106 men, 448 women and 464 children—total 1,018—at Sadar. 318 men, 1,858 women and 2,802 children—total 4,978—at Bhadrak, receiving gratuitous relief. 242 men, 234 women and 298 children—total 774—attending test-works at Bhadrak.
26	ANGUL ...	2·47	6	6	Rainfall at Phulbani 0·64 inch. Sowing in progress. Transplanting commenced. On account of heavy rain plants in some parts washed away. Condition of agricultural stock fair. Common and cheapest rice selling at $7\frac{1}{2}$ seers per rupee in Khondmals. Persons on gratuitous relief in Angul—80 men, 214 women and 499 children—total 793—and 94 men, 154 women and 79 children—total 327—in Khondmals. Persons attending test- works—82 men, 113 women and 26 children—total 221—in Angul and 152 men, 130 women and 50 children—total 332—in Khondmals.

* The report is for the week ending the 4th July 1908.

GENERAL SUMMARY.—The rainfall was heavy in the Burdwan and Presidency Divisions and also in Darjeeling, the Sonthal Parganas, Sambalpur, Hazaribagh, Ranchi and Manbhum. In Bihar and Orissa the fall was light. Sowing of *bhadoi* crops and weeding of jute continue. Transplantation of paddy has commenced. Some damage has been done to standing crops by the recent heavy rain in Burdwan, Nadia, Jessore, Khulna and Angul. More rain is needed in Bihar. In Purnea paddy seedlings and jute are suffering from want of rain. Sugarcane is doing well all over the Province. The price of common rice is stationary in most districts; it has risen in Hooghly, Jessore, Saran, Monghyr, Cuttack, Balasore and Manbhum, and has fallen in Nadia, Patna and the Sonthal Parganas. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. Scarcity is apprehended in the Pataspur and Ramnagar thanas of the Midnapore district. The fodder and water-supply is reported to be sufficient. Cattle-disease is prevalent in Gaya, Darbhanga, Monghyr, Bhagalpur, Purnea, Sambalpur, Hazaribagh, Ranchi, Palamau and Manbhum. Test-works in Bankura, Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 17,349 persons and gratuitous relief was given to 26,715 persons, of whom 15,757 were in Orissa.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 14th July 1908.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

SUMMARY OF THE RAINFALL OBSERVATIONS TAKEN IN BENGAL DURING THE MONTH OF JUNE 1908.

The monsoon rains set in during the middle of the month. This year the South-west monsoon commenced in Bengal Proper on the 17th and in Bihar and Chota Nagpur on the 20th. During June, the distribution of rain was irregular. The precipitation was very heavy in the districts of the Burdwan and Presidency Divisions, Burdwan received an average rainfall of 16·10 (normal 10·15), Hooghly 17·10 (normal 10·28), Howrah 23·07 (normal 10·93), the 24-Parganas 19·37 (normal 10·89), Calcutta 26·12 (normal 11·04), Nadia 20·17 (normal 10·00) and Jessore 17·07 (normal 11·69).

Excess of the normal fall was received as follows:—In Burdwan 5 95, Hooghly 6·82, Howrah 12·14, 24-Parganas 8·48, Calcutta 15·08, Nadia 10·17 and Jessore 5·38 inches. Expressed in percentage figures, the above districts received 159, 166, 271, 178, 237, 201 and 146 per cent. respectively.

Excepting the districts of Birbhum, Bankura, Midnapore, Murshidabad, Khulna, Cuttack, Balasore, Puri and Manbhum, where there was a slight excess, all the districts of the Patna, Bhagalpur, Orissa and Chota Nagpur Divisions received less than the average fall.

From the percentage table, it will be seen that South-West Bengal received 145 per cent., Bihar 52 per cent., Orissa 76 per cent. and Chota Nagpur 76 percent

The total rainfall from January to June was 105 per cent. of the normal in South-West Bengal, 63 per cent. in Bihar, 63 per cent. in Orissa and 81 per cent. in Chota Nagpur.

The following table gives the rainfall of the various divisions of Bengal in June and in each of the previous months of the present year as compared with the normal values for the same periods. The figures given represent the actual falls expressed as percentage of the normal falls :—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	Actual rainfall of first six months of 1908 expressed as a percentage of the normal fall for the period.
South-West Bengal	275	20	16	16	78	145	105

The total fall of rain from 5th to 11th July 1908	7 94
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·13
The total fall from 1st January to 11th July 1908	41 21
The average fall of the corresponding period for 24 years, Surveyor-General's Office	26·31

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark, gloomy; d, drizzling rain; p, passing temporary showers; q, squally; ● continued rain.

RESOLUTION ON THE TRIENNIAL REPORT ON THE WORKING OF THE CHARITABLE DISPENSARIES IN BENGAL AND THE CALCUTTA MEDICAL INSTITUTIONS FOR THE YEARS 1905, 1906 AND 1907.

MUNICIPAL DEPARTMENT—MEDICAL.

Calcutta, the 11th July 1908.

RESOLUTION No. 1182Medl.

READ—

The Triennial Report on the working of the Charitable Dispensaries in Bengal and the Calcutta Medical Institutions for the years 1905, 1906 and 1907.

Read also—

The Triennial Report for the years 1902, 1903 and 1904 and the Resolution recorded thereon.

The present report is submitted by Colonel R. Macrae, I.M.S., who succeeded Colonel S. H. Browne, I.M.S., as Inspector-General of Civil Hospitals, Bengal, in September 1905. During Colonel Macrae's absence on leave from May to December 1906, Colonel A. M. Crofts, I.M.S., officiated as Inspector-General of Civil Hospitals.

2. The opening paragraphs of the report deal with the administrative changes that have taken place during the three years under review. The most important of these was the partition of the Province, which resulted in the transfer of 14 districts, with their medical charges and institutions, to the new Province of Eastern Bengal and Assam, and the transfer of Sambalpur from the Central Provinces to Bengal. The emoluments of the officers of the Indian Medical Service were improved; and promotion from the rank of Captain to that of Major was accelerated on certain conditions. A scheme for affording practical teaching in the use of the X-ray apparatus was introduced; and Medical officers desiring to acquire this instruction have been allowed to go through a course of training at the institute established at Dehra Dun for the purpose. Two Indian Medical Service officers, two Military Assistant Surgeons and five Civil Assistant Surgeons in this Province availed themselves of the privilege. Changes have been made in the curriculum of the Medical College, Calcutta, to adapt it to the requirements of the new University Regulations; and the creation of a separate chair of Biology has been sanctioned since the close of the period. The Lieutenant-Governor shares with Colonel Macrae the regret expressed by him at the loss which the service has sustained by the death and retirement of some of the ablest and most experienced of the Commissioned Medical officers.

3. *Calcutta Hospitals and Dispensaries.*—The triennium has been specially remarkable for the comprehensive reforms carried out in the chief medical institutions in Calcutta. Far-reaching improvements were effected in the Presidency General, Medical College and Campbell Hospitals at a heavy cost, in respect of buildings, furniture, surgical instruments and appliances, beds and bedding, nursing establishment and other matters tending to the comfort of the patients and the efficiency of the institutions. A few of the more important items can only be mentioned here. At the Presidency General Hospital the new paying patients' ward has been completed at a cost of Rs. 2,64,364, and will shortly be fully equipped and ready for occupation. An administrative block was constructed at a cost of Rs 50,884; and the surroundings of the hospital were improved by the acquisition of further land and the filling in of insanitary tanks at a cost of nearly Rs. 50,000. The total cost to Government of the many improvements and reforms effected at the Medical College Hospital is estimated at Rs. 6,51,572. These include the construction of a large new surgical block (Rs. 2,81,441), the construction of quarters for the nurses of both the Eden and the Medical College Hospitals (Rs. 1,79,434), the paving of the wards with marble (Rs. 56,307) and the installation of electric lights and fans (Rs. 22,816). Land was acquired by Government at a cost of Rs. 1,39,944 for the construction of three separate paying patients' wards for Indians. For the construction of the ward buildings, the thanks of Government and of the public are due to the generosity of Rai Bahadur Shib Proshad Jhoonjhoonwala, Babu Hari Das Goculdas and Mr. Musaji Ahmad Saliji, each of whom has given a very handsome donation of Rs. 30,000 for the purpose. With the generous contribution of Rs. 90,000 received through His Royal Highness the Prince of Wales, various improvements have been carried out at the Medical College and connected hospitals. At the Campbell Hospital, the improvements effected include the construction of a single-storeyed ward for male patients, the remodelling of the central portion of the old main building, and the erection of a new two-storeyed ward, at an aggregate cost of Rs. 1,72,878, besides numerous minor improvements at an aggregate cost of Rs. 32,685. The large area known as Haritola *basti* adjoining the hospital has been acquired at a cost of Rs. 1,17,412; and a scheme for utilizing the site in the expansion of the hospital, the erection of a hostel for students' quarters and other buildings is under consideration. The Chandney Hospital, which is an adjunct of the Mayo Hospital and affords medical relief to the largest number of out-patients, has hitherto been located in an antiquated building of inappropriate type. Steps are now being taken, with the assistance of a grant from Government, to erect a new and suitable building on another site that has been acquired for the purpose. At the Sambhu Nath Pandit Hospital, quarters for nurses were completed, and a site for a new surgical ward was acquired by Government at a cost of Rs. 10,181; and it is hoped that before long the balance of

the money required for the construction of the ward, towards which Rs. 10,000 have already been contributed from the proceeds of the Minto Fête, will be forthcoming from the Indian public, for whose benefit this hospital chiefly exists. At the Howrah General Hospital, besides many improvements carried out by Government at a cost of Rs. 78,400, a new ward for Indian patients is being constructed with the sum of Rs. 25,000 bequeathed by the late Babu Debi Prosad.

4. The Inspector-General notices that while the nursing in the Calcutta hospitals has considerably improved of recent years, there is still much room for further improvement. The whole subject of the arrangements for nursing in Calcutta and in the mufassal is now under the consideration of the Lieutenant-Governor, with a view to placing them upon a more suitable and efficient basis.

5. The average yearly number of in-door patients treated in all the Calcutta hospitals during the triennium was 28,231, against 27,598 and 26,169 the averages of the two previous three year periods. The increase was shared by all the hospitals, and was most marked in the Medical College, Sambhu Nath Pandit and Dufferin Victoria Hospitals. The accommodation for in-patients was ample in all, except the Sambhu Nath Pandit Hospital, where there was some overcrowding. All possible arrangements, however, were made to receive the increased number of patients. The average annual number of out-door patients treated in the hospitals was 275,970, against 267,776 in the previous triennium. The largest number was, as usual, treated at the Chandney Hospital, where the aggregate for the triennium was 136,381. Next in order come the Medical College, Sambhu Nath Pandit, Campbell and Mayo Hospitals, with aggregates of 123,739, 81,895, 80,479 and 76,972, respectively.

6. The total annual income of the Calcutta hospitals, excluding the Police Hospital and the Dockyard Dispensary, was Rs. 11,79,702 in 1905, Rs. 14,48,158 in 1906 and Rs. 18,40,103 in 1907. The figures for 1905 include the handsome donation of Rs. 1,00,000 received from the Hon'ble Maharaja Sir Rameshwar Singh Bahadur through His Royal Highness the Prince of Wales, of which Rs. 90,000 went to the Medical College Hospital and Rs. 10,000 to the Dufferin Victoria Hospital. The figures for 1907 include a contribution of Rs. 1,40,000 from the Minto Fête Fund, which was distributed as follows:—Medical College Hospital, Rs. 20,000; Presidency General Hospital, Rs. 20,000; Campbell Hospital, Rs. 40,000; Sambhu Nath Pandit Hospital, Rs. 10,000; Mayo Hospital, Rs. 25,000; and the Dufferin Victoria Hospital, Rs. 25,000. The total amount received from paying patients during the same period was Rs. 2,89,861, against Rs. 2,55,315 collected in the previous triennium. A satisfactory increase occurred in the sum raised by private subscriptions, which amounted to Rs. 1,81,874, against Rs. 82,004 in the previous period. Sir Andrew Fraser takes this opportunity of placing on record his appreciation of the service rendered by Mrs. D. King, through whose efforts large sums were collected on different occasions and devoted to the provision of comforts and conveniences at the hospitals. The Lieutenant-Governor shares the regret expressed by the Inspector-General of Civil Hospitals at the comparatively small amount contributed by the Corporation of Calcutta towards the maintenance of the medical institutions in the City, and he hopes that the Commissioners may yet be induced to recognise their further responsibility in this respect. The latest figures available go to show that while the mufassal Municipalities in this Province have during the last three years contributed on the average more than 22 per cent. of the total cost of the medical institutions maintained within their limits, the Corporation has during the same period provided between 3 and 4 per cent. only of the cost of the institutions in Calcutta.

7. *Charitable Dispensaries outside Calcutta.*—In consequence of the partition of Bengal, 209 dispensaries were transferred to the new Province of Eastern Bengal and Assam, while 16 dispensaries from the Central Provinces were taken over with the district of Sambalpur. During the triennium 41 new dispensaries were opened, and 5 old ones were closed. The net result at the close of the year 1907 was 587 dispensaries in operation, of which 66 were Government institutions, 64 railway, 266 local fund, 45 private aided

and 146 private non-aided dispensaries. The Lieutenant-Governor agrees with the Inspector-General of Civil Hospitals, that the system of deputing medical officers in charge of dispensaries to visit outlying market centres for the purpose of affording medical relief might with advantage be more extensively adopted.

8. Particulars in regard to the number of indoor patients treated are given only for classes I (State public , III (local funds), and IV (private aided dispensaries. In these the average number treated during the triennium was 60,796, the highest figures being attained in the Bankipore and Berhampore Hospitals. Of the total number of patients treated, an average of only 12·72 per cent. paid for their own food, which shows that no advance was made in this respect as compared with the percentage of 13·93 which was reached in 1904. The Lieutenant-Governor desires to emphasize the remarks recorded on this subject in the Resolution on the last triennial report. The record of attendance of outdoor patients is one of steady progress, the figures for 1907 showing an increase of 22·38 per cent. on the figures for 1904; and there is every indication of the growing popularity of these institutions. The Lieutenant-Governor notices with pleasure the account given in paragraph 40 of the report of the increased popularity of certain individual dispensaries, which must be largely attributed to the efforts of the local medical officers.

9. As usual, malarial fever and allied complaints accounted for the largest number of admissions, the figures being 1,072,854 in 1907, against 915,410 in 1905. The action that is being taken by Government with a view to checking the ravages of malaria in this Province has already been explained in the Resolution on the Sanitary Commissioner's Report for 1907. Skin diseases and diseases of the eye show 552,896 and 163,127 admissions, repectively, in 1907, as compared with 476,895 and 146,934 in 1905 ; while no less than 335,268 persons were treated for intestinal worms in 1907, against 275,006 in 1905. The number of cholera patients brought to the dispensaries increased from 9,722 to 12,984 in the same period ; but the number of plague and small-pox cases so treated continued to be very small. One of the most satisfactory features of the returns is the marked increase in the number of female patients that availed themselves of treatment at the dispensaries, the number in the past year being 18·67 per cent. higher than in 1904. This rise is no doubt due in large measure to the steps taken during the last few years to provide separate treatment for females. There is still much to be done in many dispensaries to improve the arrangements in this respect ; and the Lieutenant-Governor desires that continued attention should be paid to the subject.

10. The financial position of the dispensaries during the triennium was satisfactory. The average annual income of the institutions in Classes I, III and IV was Rs. 11,80,907. Grants aggregating Rs. 5,29,877 were given by Government during the three years under review. These were utilized in the construction of new hospital buildings and the purchase of equipment. Grants were also given in many cases for specific works of improvement by the Divisional Commissioners from the allotments placed at their disposal by Government. The contributions from local funds were on the whole liberal, and testify to the increasing interest taken by local bodies, both Municipalities and District Boards, in the dispensaries under their charge. Several donations from private persons were also received; and the acknowledgments of Government are due to these gentlemen for their liberality and public spirit.

11. The thanks of the Lieutenant-Governor are due to Colonel Macrae for his interesting report, and for his efficient administration of the Department during the triennium.

By order of the Lieutenant-Governor of Bengal,

C. A. OLDHAM,

Secretary to the Govt. of Bengal.

RESOLUTION REVIEWING THE REPORTS ON THE WORKING OF THE PURI LODGING-HOUSE ACT DURING THE YEAR 1907-1908.

MUNICIPAL DEPARTMENT—SANITATION.

Calcutta, the 18th July 1908.

RESOLUTION—No. 1233San.

During the year 1907-08 the operation of the Lodging-House Act was withdrawn from the towns of Midnapore and Garhbeta, as almost all pilgrims now travel by the railway, and do not stop in these two places. The by-laws in force in the districts of the Orissa Division were revised with effect from the 1st of November 1907. Since the close of the year an Act has been passed to amend the Lodging-House Act, in order to provide further funds for the sanitation of towns frequented by pilgrims, to prevent overcrowding in lodging-houses and to remove certain minor defects which the practical working of the Act has disclosed.

2. The number of licensed lodging-houses fell from 1,759 in 1906-07 to 1,746 in 1907-08, although the number of persons for whom accommodation was provided rose from 66,322 to 66,818. In Nadia and Naihati, however, there was an increase of 27 and 35, respectively, in the number of houses licensed. In both these towns there was an increase in the number of pilgrims, due to the *Ardhoday Yog* festival, which took place on the 2nd February 1908. In the town of Puri, 89 licenses were suspended during the year for disobedience of orders issued in respect of the sanitary condition of the lodging-houses; but in most cases the order was subsequently withdrawn on the lodging-house-keepers complying with the requisitions of the Health Officer. The attendance during the *Rath Jatra* was smaller than in the previous year, only 51,743 pilgrims having visited the town, as compared with 70,000 in 1906-07.

3. Four hundred and eight cases were disposed of under the Act during the year, against 302 in the previous year. The number of persons convicted was 383, against 267 in 1906-07. The amount of fines realized rose from Rs. 4,461 to Rs. 5,933-12.

4. The total income of the Lodging-House funds during the year (excluding the opening balance of Rs. 67,955-2-5) was Rs. 83,008-10, as compared with Rs. 83,524-0-9 in 1906-07. The income of the Deoghar Lodging-House fund fell from Rs. 10,264 to Rs. 7,297. There was an increase in the receipts at Nadia and Naihati. In the former case the income amounted to Rs. 3,127-4 (including a special Government grant of Rs. 600 for sanitary arrangements in connexion with the *Yog* festival), against Rs. 2,097-8-9 in the previous year; and in the latter it was Rs. 2,066-8 (including a Government grant of Rs. 500 for the above purpose), against Rs. 500-8. The increase is principally due to the larger attendance of pilgrims on the occasion of the *Yog* festival. The *chutties* on the Jagannath Road in Cuttack and Balasore show a marked increase in receipts, due to the settlement of road-side lands by auction at higher rates.

5. The total expenditure of the Lodging-House funds rose from Rs. 44,218 in 1906-07 to Rs. 90,768 in 1907-08. The increase was almost entirely due to the large contribution of Rs. 37,500 given by the Gaya Lodging-House Committee towards the local water-works scheme. There were slight increases in expenditure at Nadia and Naihati, due to the special sanitary arrangements that had to be made for the influx of pilgrims on the occasion of the *Ardhoday Yog* festival. The Lieutenant-Governor is glad to notice that, taking into account the invested balance, about half-a-lakh of rupees will be available from the Puri fund as a contribution towards the cost of the drainage and water-works schemes of that town, which have received the approval of Government.

6. The health of the pilgrims was on the whole fair. Outbreaks of cholera occurred at Gaya and Puri, but these were not so serious as in the preceding year. In the former town the number of deaths reported from this cause was 93 against 228, and in the latter 256 against 400 in 1906-07. The total mortality among the pilgrims during the year was 636, as compared with 1,208 in the preceding year. Plague was prevalent in Gaya, but not a single pilgrim died of the disease. It also appeared in Deoghar, but only one death is attributed to this cause. In Puri there were 84 deaths from dysentery and 63 from fever. The sanitary arrangements of the lodging-houses were generally satisfactory, and the water-supply was good and sufficient throughout the year.

7. The thanks of the Lieutenant-Governor are due to the District Officers and Health Officers concerned for the successful working of the Act during the year.

ORDER.—Ordered that a copy of the Resolution be submitted to the Government of India in the Home Department, and that copies be forwarded to the Commissioners of the Burdwan, Presidency, Patna, Bhagalpur and Orissa Divisions, for information.

Ordered also that a copy of the Resolution be communicated to the Sanitary Commissioner and to the Sanitary Board, Bengal, for information, and that it be published in the *Calcutta Gazette* for general information.

By order of the Lieutenant-Governor of Bengal,

C. A. OLDHAM,

Secretary to the Government of Bengal.

RETURN OF JOINT-STOCK COMPANIES FOR THE YEAR 1907-1908.

No. 5T., dated Darjeeling, the 29th May 1908.

From—SYUD MAHOMED, KHAN BAHADUR, Inspector-General of Registration, Bengal,

To—The Secretary to the Government of Bengal, General Department.

I HAVE the honour to forward, in original, the report submitted by the Registrar of Companies, Bengal, on the working of the Indian Companies Act VI of 1882 for the year 1907-08, with the ten tabular statements prescribed by the Government of India.

No. 38, dated Calcutta, the 25th May 1908.

From—MAULVI SYUD ABDUS SALAM, Registrar of Companies, Bengal,

To—The Inspector-General of Registration, Bengal.

I HAVE the honour to submit the following report on the working of the Indian Companies Act, VI of 1882, in Bengal for the year 1907-08, together with ten tabulated statements in the forms prescribed by the Government of India.

2. Rai Behari Lal Chandra Bahadur, my predecessor, retired from the service in the afternoon of the 30th April 1907, when I relieved him, and since then I held charge of the office of Registrar for the remainder of the year.

3. From Statement No. 1 it will be seen that 512 Companies in all worked with an aggregate *nominal* capital of Rs. 36,30,64,209 and an aggregate *paid-up* capital of Rs. 20,54,65,731 till the close of the year against 416 Companies with a nominal capital of Rs. 26,03,56,709 and a paid-up capital of Rs. 17,54,04,519 in the previous year. There was thus an increase of 66 Companies, and that of Rs. 10,27,07,500 in the nominal capital and Rs. 3,00,61,212 in the paid-up capital during the year under report. One Company, namely National Stores, Limited, with a nominal capital of Rs. 1,00,000 was transferred to the Registrar of Joint Stock Companies of Eastern Bengal and Assam under the order of the Government of Bengal, Nos. 1380-81P.—D., dated the 11th July 1906.

3. The number of Companies registered during the year under report was 80, and their total nominal capital and paid-up capital were Rs. 7,47,00,000, and Rs. 13,61,895 respectively. In the number of Companies referred to the largest number (48) came out under the classification, Coal Companies, against 20 under the same category in the previous year. The increase is due to larger profit, accrued in the speculation. Trading Companies (14) came out next. Last year there were 32 Trading Companies. The increase in Coal Companies accounts for the decrease in Trading Companies during the year.

4. The most important of the Banking Companies registered during the year is the Hindusthan, Bank, Limited, with a nominal capital of Rs. 2 crores. The Hindusthan Co-operative Insurance Society, Limited, comes under the head of Insurance-companies with a nominal capital of Rs. 1 crore. One Native Provident Society, viz., Swadeshi Assurance and Wedding Company, Limited, with a nominal capital of Rs. 10,000 was registered during the year.

5. Statement No. III shows that 5 Companies limited by guarantee were registered during the year.

6. One hundred and seven Companies increased their capital during the year. This accounts for the healthy and prosperous state of the Companies. Of these, 2 Companies increased their nominal capital, 93 Companies increased their paid-up capital, and 12 Companies increased both their nominal and paid-up capital.

7. There was no reduction made in the capital of any Company during the year.

8. Thirteen Companies having an aggregate nominal capital of Rs. 35,42,500 and a paid-up capital of Rs. 22,68,248 wound up their business during the year. One Company which went into liquidation in the previous year has submitted its final report during the year.

9. The total number of Companies limited by guarantee, which worked till the close of the year, was 15 as shown in Statement No. IX.

10. The following Societies were registered during the year under Act XXI of 1860 :—

(1) J. M. Training School.

(2) Society of St. Vincent de Paul.

(3) Calcutta Historical Society.

(4) The Calcutta Homœopathic College.

(5) Anglo-Indian Association.

(6) Lady Minto's Indian Nursing Association.

(7) Arrah Nagri Procharini Sabha.

11. The fees realized during the year amounted to Rs. 32,658-2 against Rs. 22,262-12 and the expenditure amounted to Rs. 1,028-11-4 against Rs. 983 in the past year, the nett revenue therefore is Rs. 31,629-6-8 to the credit of Government against Rs. 21,279-12 in the previous year. The increase in fees is due to increase in registration and to the large nominal capital.

12. The provisions of section 69 of the Act were complied with almost everywhere as far as it could be ascertained.

13. The provisions of Act IV of 1900 (the Indian Companies Branch Registers Act) were not availed of by any of the Companies.

14. The operations during the year were satisfactory showing an increase in registration, in receipts, as also in surplus, to Government.

Statement No. I.

Abstract of Joint Stock Companies for the year 1907-08.

WEATHER AND CROP REPORT.

For the week ending the 20th July 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	4·23	7	7	Rainfall at Kalna 3·27, Katwa 2·75, and Raniganj 2·39 inches. Transplantation of winter rice commenced everywhere. Condition of jute, sugarcane and early rice fair. No cattle-disease. Fodder and water sufficient.
2	BIRBHUM ...	5·38	7	7	Weather seasonable. Rainfall at Rampurhât 3·12 inches. Ploughing of fields and transplantation of paddy continuing. Fodder and water sufficient.
3	BANKURA ...	4·79	6½	6½	Weather rainy. Rainfall at Vishnupur 2·99 inches. Transplantation of winter rice going on briskly. Prospects of crops good. Persons gratuitously relieved—men 200, women 420 and children 190—total 810. People attending test-works—4 men, 1 woman—total 5—on the 17th in Khatra and Simlapal charges. Labourers getting works in the field. No cattle-disease Condition of agricultural stock fair. Common rice selling at 5 to 6½ seers a rupee in the affected tracts.
4	MIDNAPORE .	9·56	6	6	Rainfall at Contai 5·49, at Tamluk 4·50, and at Ghatal 3·65 inches. Transplantation progressing rapidly. Condition of jute fair. Sugarcane good. Common rice selling at 7 seers per rupee at Contai, 6½ seers at Tamluk and Ghatal.
5	HOOGHLY ...	2·69	6⅝	6¼	Weather cloudy. Rainfall in the District general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute, sugarcane and *aus* paddy fair. Weeding of jute and *aus* paddy and transplantation of *haimantik* paddy continuing. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	4·78	6½	6¼	Weather still unsettled. More than 5 inches of rainfall reported at Uluberia during the past week. Prospects of *aus* paddy fair at Uluberia; those of jute not very favourable In the Sadar sub-division the condition of jute on high lands hopeful, but not on low lands from which rain-water not yet drained off completely. The process of transplantation is going on. The condition of agricultural stock good. No cattle-disease.
7	24-PARGANAS	8·07	6¾	7½	Weather seasonable. Rain sufficient everywhere. Jute unfavourable, partly damaged by recent rain in Basirhat and Diamond Harbour. Common rice selling at 6½ seers per rupee at Barasat, 6¾ seers at Basirhat, 6¾ seers at Diamond Harbour and 7 seers at Barrackpore.
8	NADIA ...	2·92	6⅝	6½	Rainfall at Ranaghat 0·88, Chuadanga 1·76, Meherpur 1·80 and Kushtia 3·16 inches. Prospects of paddy and jute on high lands good, those on low lands less favourable. Transplantation of *aman* paddy continuing. Prices of staple food-grains slightly risen. Stocks of food-grains insufficient. Scarcity apprehended. Condition of cattle fair. Fodder barely sufficient. Persons attending test-works on the 15th—3,235 men and 3 women—total 3,238. Casual relief being distributed.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	2·46	7	7	Rainfall at Lalbagh 1·84, Jangipur 0·68 and Kandi 4·75 inches. Weather hot and cloudy. Transplantation of *aman* paddy going on. Condition of *bhadoi* crops good. Sowing of jute finished; the crop affected to some extent in the Gokaran thana by the heavy rainfall, but its condition good in other parts of the district. Weather favourable for jute. Stocks of food-grains not likely to be sufficient. No cattle-disease. Fodder and water sufficient.
10	JESSORE ...	1·59	7	7	Rainfall at Narail 0·91, Bangaon 2·44 inches. Weather seasonable. Condition of jute not favourable in some parts of the Bangaon subdivision. Stocks of food-grains getting exhausted. Condition of agricultural stock good on the whole. Fodder sufficient. Cattle-disease reported from the Narail thana. Prices of food-grains stationary. High prices continuing. 399 persons employed on District Board works and 2,9,6 persons being given gratuitous relief.
11	KHULNA ...	2·63	8½	8½	Rainfall at Satkhira 0·73 and Bagerhat 5·25 inches. Weather seasonable. Prices of staple food-crops almost stationary. Stocks of food-grains sufficient till next harvest. Sowings of *aus* paddy and jute over. Transplanation of *aman* paddy commenced. No apprehension of famine at present. Prospects of standing crops not favourable. *Aus* paddy and jute affected by continued rain. Prospects of jute not very favourable. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	2·51	7½	7½	Weather hot and cloudy. Season favourable to *bhadoi* crops. *Marua* being transplaned. More rain urgently wanted for sowing paddy. Sugarcane promising well. Prices almost stationary. Food-stocks likely to be sufficient if not largely exported. Condition of cattle good. Fodder and water sufficient. *Makai* not available.
13	GAYA ...	0·99	8* 9†	8* 8½†	Weather cloudy and showery, sometimes hot. Rainfall almost general but scanty at the Sadar and Jahanabad subdivisions. Sugarcane doing well. Paddy seedlings sprouting nicely. *Marua*, maize and other *bhadoi* crops being weeded. Prices stationary with a fall in the price of maize at the Sadar subdivision. Fodder and water for cattle ample. Condition of agricultural stock good.
14	SHAHABAD ...	3·99	8	8 10*	Rainfall at Buxar 4·90, at Bhabua 2·75, Sasaram 1·11, and Dehri 4·17 inches. Sugarcane doing well. Sowings of *bhadoi* paddy and transplanation of *marua* in progress, but more rain wanted for paddy seedlings in the Bhabua and Sasaram subdivisions. Prices of food-grains stationary. Food-stocks below the normal, but sufficient if not exported. Agricultural stock normal. Fodder and water sufficient. Cattle-disease reported from thana Dinara. *Masuria janera* not available.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee. This week.	Price of common rice in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
15	SARAN ...	1·85	8 10*	$7\frac{3}{4}$ 10*	Weather hot. Rainfall at Siwan 4·20, at Gopalganj 4·32 inches. Transplanting of *marua*, weeding of maize and sowing of paddy going on. Prices of staple food-grains stationary. Food-stock resources external. No apprehension of scarcity. Agricultural stock good. No cattle-disease. Fodder and water sufficient.
16	CHAMPARAN ...	5·43	8 11*	8 11*	Weather seasonable. Rainfall at Bettiah 2·01 inches. Good rain benefited all crops. Transplantation of paddy and weeding of *bhadoi* crops going on. Prospects of jute and sugarcane fair. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
17	MUZAFFARPUR	3·59	$8\frac{1}{4}$ $10\frac{1}{4}$*	$8\frac{1}{4}$ $10\frac{1}{4}$*	Weather seasonable. Rainfall at Hajipur 4·02, at Sitamarhi 1·77 inches. Prospects of standing crops generally good. Common rice and maize selling at $7\frac{3}{4}$ and $9\frac{3}{4}$ seers per rupee respectively at Hajipur and 8 seers and 11 seers per rupee respectively at Sitamarhi. Transplantation of paddy and *marua* and sowings of maize and *sama* still continuing. Agricultural stock in good condition. No cattle-disease. Fodder and water sufficient. Scarcity not apprehended.
18	DARBHANGA ...	6·70	$8\frac{1}{4}$ 12*	$8\frac{1}{4}$ $11\frac{1}{2}$*	Weather seasonable. General and good rainfall during the week which has been very beneficial and has improved agricultural prospects. Paddy and *bhadoi* crops being sown. Stocks sufficient. No apprehension of scarcity. Cattle-disease reported from two villages in Phulparas thana and three villages in Benepatti thana. Fodder and water available.
19	MONGHYR ...	1·78	7 9*	7 9*	Weather seasonable. *Bhadoi* sowing continuing. Prices of staple food-crops stationary. Fodder and water sufficient. Prevalence of cattle-disease reported from the Tegra thana.
20	BHAGALPUR ...	1·04	$8\frac{5}{16}$ $9\frac{1}{2}$*	$8\frac{5}{16}$ $12\frac{5}{8}$*	Weather cloudy with rain. Paddy much benefited by the recent rain. Prospects of *bhadoi* crops good. More rain wanted in Banka and Madhipura. Transplantation of paddy commenced in the Banka subdivision. Agricultural stock sufficient. Cattle-disease reported from two villages in Supaul. Condition of jute fair in Supaul.
21	PURNEA ...	6·44	8	8	Weather seasonable. Standing crops benefited by the recent rain. Transplanting begun in places. More rain urgently wanted. Condition of agricultural stock good. Jute improved by recent rain. Stocks of food-grains sufficient. Cattle-disease reported from Forbesganj thana and Dighalbank pound. Fodder and water sufficient. Common rice selling at $8\frac{1}{4}$ and 9 seers at Araria and Kishanganj respectively.

* The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather, and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
22	DARJEELING ...	6·36	7 10*	7 10*	Weather seasonable. Hills—Maize growing well and being harvested. Potatoes also being harvested. *Chota marua* and *bhadoi* paddy growing well. Winter rice and *bara marua* being transplanted. Terai—Transplanting of winter rice going on. Standing crops doing fairly well Agricultural stock in good condition.
23	SONTHAL PARGANAS.	2·15	$6\frac{3}{16}$ 9*	$6\frac{7}{8}$ $9\frac{1}{8}$*	Rainfall at Deoghur 2·74, at Godda 1·27, at Jamtara 2·61, at Pakour 2·90 and at Rajmahal 3·77 inches. Ploughing, sowing and transplanting all in progress. Prospects of crops favourable. Jute doing well. Prices of staple food-grains almost stationary. Stocks of food-grains likely to last till the next harvest. No immediate apprehension of scarcity. Poor cultivators feeling the effects of high prices. Fodder and water sufficient.
24	CUTTACK ...	2·63	$7\frac{3}{8}\frac{5}{4}$	$7\frac{3}{8}\frac{9}{8}$	Rainfall general. *Beali* paddy and jute being weeded and growing well *Saradh*, paddy, and *mandia* being transplanted and growing well. *Arhar*, turmeric and sugarcane also growing well. Fodder and water sufficient. Condition of cattle generally good. 715 men, 1,745 women and 3,954 children—total 6,414—received gratuitous relief. 574 men, 622 women and 1,519 children—total 2,715—attended test-works.
25	BALASORE ...	0·61	$7\frac{1}{2}$	7	Weather seasonable. Rainfall at Bhadrak 0·37 inch. Sowing, puddling and transplanting of *saradh* paddy continuing. Sugarcane and *ashu* plants thriving. Weeding of jute continuing and its prospects fair. Other crops and vegetables doing well. Stocks of food-grains insufficient. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal and Basta thanas. Fodder and water sufficient. Common rice selling at 7 seers per rupee at Bhadrak. 52 men, 212 women and 197 children—total 461—at Sadar, and 332 men, 1,980 women and 2,905 children—total 5,217—at Bhadrak receiving gratuitous relief. 208 men, 321 women and 386 children—total 915—attending test-works.
26	ANGUL ...	2·34	6	6	Rainfall at Phulbani 1·23 inches. Young paddy plants and *bhadoi* crops doing well. Transplantation of *mandia* and of winter paddy in progress. Condition of agricultural stock fair. Common and cheapest rice selling at $7\frac{1}{2}$ seers per rupee in the Khondmals. Persons on gratuitous relief in Angul —68 men, 161 women and 310 children—total 539— and 101 men, 106 women and 50 children—total 257—in Khondmals. Persons attending test-works—140 men, 70 women and 25 children—total 235—in Angul, and 281 men, 163 women and 73 children—total 517—in Khondmals.
27	PURI ...	0·47	$6\frac{5}{8}$	7	*Beali* paddy being weeded and *saradh* paddy growing well. Fodder and water sufficient. Persons attending test-works—men 427, women 214 and children 671—total 1,312. Recipients of gratuitous relief—men 335, women 972 and children 967—total 2,274. Men 84, child 1—attending piece-works.

Puddling of paddy going on in Nayagarh, Ranpur, Hindol, Daspalla and Dhenkanal *Behura* operation (reploughing) begun in Mourbhanj, Bonai and Keonjhar. Sugarcane growing well in Ranpur, Narsingpur, Hindol, Keonjhar, Nayagarh, Athgarh, Talcher, Dhenkanal, Sonpur, Patna and Kalahandi. Condition of cotton fair in Hindol. Agricultural stock, fodder and water sufficient. Price of rice varying from 6 seers in Rairakhol and Athgarh, and 6½ seers in Mourbhanj, Dhenkanal and Keonjhar to 9 ½ seers in Sonpur and 11 seers in Patna and Talcher.

* The report is for the week ending the 11th July 1908.

GENERAL SUMMARY.—The rainfall during the week was heavy in the Burdwan and Chota Nagpur Divisions and also in the 24-Parganas, Champaran, Darbhanga, Purnea, Darjeeling, Sambalpur and Cooch Behar, and elsewhere generally light. The recent rainfall in Bihar has much benefited the standing crops and facilitated sowing of *bhadoi* crops and transplanting of paddy. More rain is still wanted in Patna, Gaya, Shahabad, Bhagalpur and Purnea. Transplantation of winter rice is in progress throughout the Province. Weeding of jute is going on. Sugarcane is doing well. Condition of the jute crop on the low lands in most districts of the Presidency Division is not favourable owing to recent heavy rainfall. Continued rain has hindered agricultural operations in the Sadar subdivision of the Sambalpur district, where some damage has been done to cotton plants by caterpillars. The price of common rice has risen in the 24-Parganas, Nadia, Muzaffarpur, the Sonthal Parganas, Puri and Hazaribagh; fallen in Hooghly, Patna, Saran and Balasore, and is stationary in the remaining districts. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. Fodder and water supply is sufficient. Cattle-disease is reported from Jessore, Shahabad, Darbhanga, Monghyr, Bhagalpur, Purnea, Sambalpur, Hazaribagh, Ranchi, Palamau and Manbhum. Gratuitous relief was given to 26,100 persons, of whom 15,162 were in Orissa. The number of persons on test-works in Bankura, Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi was 14,308, and the number of famine relief-works in Ranchi was 4,722.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 21st July 1908.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

	%
The mean relative humidity	84
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 12th to 18th July 1908	8·40
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·92
The total fall from 1st January to 18th July 1908	49·61
The average fall of the corresponding period for 24 years, Surveyor-General's Office	29·23

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder; <, lightning; ● continued rain; g, dark, gloomy weather.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
ALIPORE (CALCUTTA), *the 20th July 1908.*

C. W. PEAKE,
for Offg. Director-General of Observatories.

RESOLUTION ON THE ANNUAL REPORT OF THE PORT OFFICER, CALCUTTA, FOR THE YEAR 1907-08.

No. 2279Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 25th July 1908.

RESOLUTION.

READ—

Letter No. 3074, dated 3rd July 1908, from the Port Officer, Calcutta, submitting the Annual Report of his Department for 1907-08.

There were 52 pilots on the active list at the close of the year 1807-08, against 50 at the end of 1906-07. There were two casualties, one Branch Pilot and one Leadsman Apprentice having been invalided during the year. Five

Leadsmen were recruited from England. It was intended to fill one of these appointments locally, but no eligible candidate came forward. Arrangements have been made to obtain three recruits during the current year to meet the requirements of the service.

2. One thousand five hundred and sixty-seven vessels arrived at the port and 1,562 departed with a gross tonnage of 6,010,081 inwards and 5,985,574 outwards. The average tonnage of steam sailing vessels inwards and outwards was 3,824, as compared with 3,846, 3,722 and 3,734, the averages for the three previous years respectively. The pilotage receipts amounted to Rs. 13,49,151 during the year as against Rs. 14,21,189, Rs. 13,62,785, and Rs. 13,54,169, respectively, during the past three years. The rates for pilotage vary with the draft of the vessel and not with the tonnage, and the fall in the receipts would appear to indicate that a larger tonnage of cargo is now being carried for the same draft.

3. There has been an increase in the number of inward vessels drawing over 21 feet and decrease in the outward as compared with those of the previous year. The number of such vessels piloted inwards and outwards was 334 and 896, against 315 and 954 respectively in the year before. One sailing ship of more than 21 feet draught entered the port and one departed during the year.

4. *Six* inward vessels only were neaped at Diamond Harbour during the year for want of sufficient depth of water over the bars of the river, while last year *twenty* vessels were neaped at Diamond Harbour, *one* at Saugor Island and *six* at Calcutta. The bars were exceptionally good during the year owing, no doubt, partly to the successful dredging operations of the *Sandpiper*. Only *6* vessels were detained at the Sandheads for want of pilots, against *13* during the previous year, the average detention being 29 hours and 4 minutes.

5. There were 5 collisions and 20 groundings, against 9 collisions and 30 groundings in the previous year. In three cases of collisions the pilots were free from blame, and in two they were found to have been negligent. In respect to the groundings, the pilots were in fault for error of judgment in two cases only.

6. Fifty-four preliminary enquiries were held, as the result of which three cases were referred to Departmental Courts and five to special Courts of Enquiry. No Marine Court under Act XII of 1859 was held during the year.

7. Eighty-three candidates appeared at examinations for Colonial and Home Trade Certificates of Competency, of whom forty-six passed. Four hundred and thirty-two candidates appeared at examinations for Certificates of Competency as Master, Serang, Engineer and Engine-driver under the Inland Steam-vessels Act, VI of 1884, but only 250 passed.

8. Mr. G. Robertson was the First Engineers and Shipwright-Surveyor throughout the year. Mr. E. G. Venn, Chief Engineer, R.I.M., was the Second Engineer and Shipwright-Surveyor. The appointment of a Third Sureyor was found necessary to cope with the increase of work, and Mr. H. R. Stark acted in the newly-created appointment from the 24th June to 31st October 1907 as a temporary measure. Mr. F. Olford, Engineer, Royal Indian Marine, was appointed permanently as Third Engineer and Shipwright-Surveyor from the 4th November 1907.

9. Commander St. L. S. Warden, R.I.M., presided over the Department throughout the year. Commander A. S. Balfour, R.I.M., continued as Assistant Port Officer and Deputy Shipping Master up to the 16th of December 1907 when he reverted to the Royal Indian Marine on being relieved by Lieutenant H. E. Harold, R.I.M., who has held the post up to the close of the year.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary.

ANNUAL REPORT ON THE GOVERNMENT CINCHONA PLANTATION AND FACTORY IN BENGAL FOR THE YEAR 1907-08

NOTIFICATION.

No. 1318M dl.—The 22nd July 1908.—The following extracts paragraphs 1 to 12 from the Annual Report on the Government Cinchona Plantation and Factory in Bengal, for the year 1907-08, are published for general information.

C. E. A. W. OLDHAM,
Secretary to the Govt. of Bengal.

Forty-sixth Annual Report of the Government Cinchona Plantation, British Sikkim, being that for the financial year 1907-08, and also the Report of the Factory of the same year, by W. W. SMITH, ESQ., *Officiating Superintendent of Cinchona Cultivation in Bengal and Officiating Government Quinologist.*

Weather and General.—At the head-quarters division Mungpoo, rainfall to the amount of 96·46 inches was recorded against an average of 123·02 inches during the preceding 20 years, the total number of wet days being 176; and the greatest amount during one day 5·62 inches. Similarly Munsong rainfall was deficient, the total measured being 72·07 inches against an average of 90·72 during the preceding six years; number of wet days 191; the largest fall in one day 2·08 inches.

2 *Plantation and Crop.*—Cinchona extensions in all divisions amount to 110·63 acres with 290,140 young trees. Of these 52·68 acres *Ledgeriana* (143,423 plants) were put out in the Mungpoo plantation and 11·27 acres *Hybrid* (*No. 2*) (19,638 plants) in the Sittong Division. No land now remains of sufficiently good quality to justify further extensions of Cinchona, and these will be discontinued in this area. At Munsong 46·68 acres of *Ledgeriana* (127,079 plants) have been added, the total area of this species now amounting to 544·61 acres.

The total number of Cinchona trees of all sorts on the permanent plantations on 31st March 1908 was 3,471,216. Of this number, 2,779,746 were *Cinchona Ledgeriana*, being 1,626,035 on Mungpoo plantation and 1,153,711 on Munsong plantation. The remainder consisted of 346,699 of *Hybrid* (*No. 1*) (all on Mungpoo plantation), 92,992 of *Hybrid* (*No. 2* and 251,779 of *Cinchona Succirubra*, both mostly on Mungpoo plantation. Details are given in Appendices A(1) and A (2). The decrease in the number of trees on the plantation as a whole since last year is 227,561 plants.

Cultivation has been but moderately maintained in the head-quarters division. The use of bonemeal was discontinued, the result not being sufficient to justify a continuation of expenditure under this heading. Mortality continues very high amongst the *Ledger* trees in this area, and the current season will show a further and marked decrease. Munsong has been kept in a good state of cultivation throughout the year and the trees continue to thrive well over the whole area.

Propagation by cuttings of selected *Hybrid* (*No. 2*) has been continued, the number of stock plants containing 6 per cent. Quinine Sulphate and upwards having increased from 1,200 to 6,820. The whole of these with their frames have been transferred to Munsong in anticipation of sanction to open out new land where conditions for Cinchona cultivation are so much better than those existing at Mungpoo.

Bark harvest (dry) for the year from all divisions amounted to 445,638 lbs., an increase of 16,081 over the preceding year. Of this total *Ledgeriana* bark was 419,388 lbs., *Succirubra* 407 lbs., *Hybrid (No. 1)* 21,914 lbs. and *Hybrid (No. 2)* 3,929 lbs. (Of *Ledgeriana* bark Munsong contributed 131,479 lbs. against 89,031 for 1906-07. The latter was obtained almost entirely from thinnings.

3. *Factory and Outturn.*—The total quantity of bark worked up in the Factory was 945,900 lbs. made up of 764,954 lbs. of *Ledgeriana* and 167,074 lbs. of *Hybrid (No. 1)* and 2,022 lbs. of *Officinalis* and 11,850 lbs. of *Succirubra.* The output of Quinine Sulphate, amounted to 27,564 lbs., being an increase of 11,499, or 71·57 per cent. on last year's output and the largest quantity ever turned out by the Factory in one year. This is in part due to the new machinery, but principally to the new method of working by which each vat produces double the amount it did previously.

Only 3,370 lbs. of Cinchona Febrifuge was produced, but this was sufficient to leave a stock in hand of 1,843lbs. and with a greater demand far more could now be produced.

No Cinchonidine Sulphate was manufactured during the year, there being an ample quantity in stock to meet the very limited demand for it. The total outturn of the Factory for the year is 30,934 lbs., being an increase of 12,216 lbs. 12 oz. over that of the preceding year.

The average yield of Quinine Sulphate from the bark used in the Factory was 2·90 per cent., a difference of ·22 per cent. from last year's figures, 2·68 per cent. These low figures will not occur in future years, for the whole of the accumulation of old and poor bark has now been worked up, and only the bark now being produced or bought will be available. The yield at the end of the year had risen to 3·34 per cent., and should rise still further, while in the course of a few years bark from the selected trees should be coming in, and a normal yield of 6 or 7 per cent. be obtained.

The Factory officers have analysed 546 samples of bark for the Plantation, while work for the improvement of Factory and other methods is constantly going on.

4. *General Charges.*—The charges against the department as a whole amount to Rs. 21,834-8-6, as against Rs. 48,104-1-6 charged last year. The total is made up of Rs. 4,748-13-6 for pay of clerical and menial staff; Rs. 543-5 for postal and telegraph charges; Rs 874 for advertising manufactured articles; Rs. 1,475 for taxes (Road cess and Public Works cess); Rs. 5,353-10-6 for extension of plantations; Rs. 5,854-10-6 for additions to Factory; and Rs. 2,985-1 for erection and alteration of bungalows. The details are given in Appendix D.

5. *Plantation Charges.*—The total plantation charges amount to Rs. 90,715-1-3, of which the sum of Rs. 64,461-14-3 was incurred for Mungpoo plantation and Rs. 26,253-3 for Munsong. Against the total plantation charges has to be placed the yield of 445,638 lbs. of bark, valued at Rs. 89,567-6-10.

6. *Factory Charges.*—The working expenses of the Factory were Rs. 90,408-9-7, being Rs. 81,983-9-7 incurred in the manufacture of Sulphate of Quinine and Rs. 8,425 in making Cinchona Febrifuge. The value of the bark put through the Factory was Rs. 1,85,768-12-2. The details are given in Appendix C (2).

7. *Issue of Manufactured Articles.*—The amount of Sulphate of Quinine sold during the year was 16,957 lbs. 6½ oz., being 1,176 lbs. 14 oz. in excess of last year's sales. The Medical Depôt, Lahore Cantonment, took 2,500 lbs., the Inspector-General of Prisons, Bengal, for pice packets 600 lbs., the Superintendent, Central Prisons, Lahore, 30 lbs., and the Superintendent, District Jail, Bannu, 27 lbs. more than in the previous year. On the other hand, the Medical Depôt, Calcutta, the Inspector General of Prisons, Bengal, for jails and lock-ups, and the Government officers and dispensaries, etc.,

took, respectively, 500 lbs., 12 lbs. and 998 lbs. 9 oz. less than they did in 1906-07. The Inspector-General of Civil Hospitals, Eastern Bengal and Assam, took 25 lbs. of Sulphate of Quinine during the year. Of Cinchona Febrifuge 3,339 lbs. 12 oz. were sold, showing a decrease of 530 lbs. over last year's sale due chiefly to the fact that the Medical Depôt, Calcutta, the Inspector-General of Prisons, Bengal, and the Government officers, and the general public took amongst them 726 lbs. 12 oz. less than last year's supply. The Medical Depôt, Lahore Cantonment, on the other hand, took 200 lbs. more than in the preceding year. Of Cinchonidine Sulphate, only 164 lbs. 12 oz. were issued. The details are given in Appendix F. A detailed statement of the sales of Sulphate of Quinine, Sulphate of Cinchonidine and Cinchona Febrifuge to dispensaries in the various provinces is given in Appendix G.

8. *Receipts.*—The toral receipts for the year amount to Rs. 2,23,681-2, being Rs. 11,410-3-4 more than last year's receipts and Rs. 20,722-14-8, more than the year's expenditure. The total budget grant for the year was Rs. 2,31,131. Owing to labour difficulties at Munsong and other causes this sum was not spent in full, there being a saving of Rs. 28,172-12-8. Of the receipts, Rs. 67,862-6 were in cash and Rs. 1,55,818-12 by book credit. Of the cash sales, Rs. 41,819-8-6 were for Sulphate of Quinine, Rs. 22,933-2—for Cinchona Febrifuge, Rs. 717-3—for Sulphate of Cinchonidine, Rs. 1,440 for Amorphous Alkaloids, Rs. 378 for Cinchona Bark and Rs. 574 8-6-for Miscellaneous items (sale proceeds of old casks and fines for cattle trespasses in the Cinchona plantation). The book credits include Rs. 1,09,531-4 for Sulphate of Quinine to Medical Depôts; Rs. 42,537-8 for the same to prisons for making into pice-packets; Rs. 375 to the Inspector-General of Civil Hospitals, Eastern Bengal and Assam and Rs. 3,375 for Cinchona Febrifuge and Sulphate of Cinchonidine issued to the Medical Depôts. The details are given in Appendix B. The outstandings on 31st March 1907 were all recovered.

9. *Stock Account.*—On the 31st March 1908 there were in stock 11,3 6 lbs. 11½ oz. of Sulphate of Quinine valued at Rs. 1,53,778-14-3; 762 lbs. of Sulphate of Cinchonidine valued at Rs. 8,572·6; 1,843 lbs. of Cinchona Febrifuge, valued at Rs. 13,822-8; 14,925 lbs. of Amorphous Alkaloids, valued at Rs. 13,059·6; 409,119lbs. of Cinchona Bark, valued at Rs. 81,033-2-8; 12,285 gallons of oil, valued at Rs. 9,151-15 9; 175,062 lbs. of chemicals, valued at Rs. 14,688-15-6; and sundry stores, valued at Rs. 5,649-11. The total value is Rs. 2,99,757-1-2 taken at the average rate at which such stock was sold during the year.

10. *Profit and Loss Account.*—This is shown in the form prescribed by Government as Appendix E. The surplus on the year's working is Rs 52,967-8-5, or deducting non-recurrent charges, Rs. 44,127-12-11.

11. *Sale of Quinine at Post Offices.*—The quantity of Sulphate of Quinine issued to the Prisons Department for conversion into pice-packets during the year was 4,000 lbs., being an increase of 600 lbs. over last year's issue.

12. *Miscellaneous*—(*a*) *Land rent.*—The revenue collected from the settlers within the Cinchona reserves for grazing and land rent amounts to Rs. 3,717-1-6. This sum was paid into the Darjeeling Treasury, no credit being taken for it in the Cinchona accounts.

(*b*) *Fuel Plantation.*—Fifteen acres of firewood plantation were cleared during the year, yielding 8,800 maunds of oak and 8,300 maunds of miscellaneous wood, total 17,100 maunds of firewood, and 171·70 acres were planted out with 118,794 plans of selected species—*Quercus Griffithii Q. semiserrata, Schima Wallichii*, and *Betula cylindrastochys*.

(*c*) *Bungalows.*—The bungalow for the Factory Assistant has been completed and occupied since July, and a house has been erected for the Factory clerk.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION, 1908.

No. 2750.—The following is published for general information.

F. W. DUKE,
Offg. Chief Secy. to the Govt. of Bengal.

The 23rd July 1908.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION, 1908.

President:

1. A. Rangaswami Iyengar, Esq., B.A., B.L., Revenue Commissioner.

Members:

2. W. McHutchin, Esq., M.I.C.E., Chief Engineer.
3. Dr. W. F. Smeeth, M.A., etc., State Geologist.
4. H. J. Bhabha, Esq., M.A., Inspector-General of Education.
5. E. Maconochie, Esq., I.C.S., Private Secretary to His Highness the Maharaja.
6. Lieut.-Col. J. Smyth, I.M.S., M.D., Senior Surgeon and Sanitary Commissioner.
7. H. H. Sparkes, Esq., Excise Commissioner in Mysore.
8. M. Muttanna, Esq., R.B., Conservator of Forests.
9. Dr. A. Lehmann, M.A., etc., Agricultural Chemist.
10. D. Devaraj Urs, Esq., Inspector-General of Police in Mysore.
11. M. Kantaraj Urs, Esq., B.A., Deputy Commissioner, Mysore District.
12. B. J. Kumarasami Naik, Esq., B.A., Deputy Commissioner, Bangalore District.
13. G. H. Krumbiegal, Esq., Superintendent, Government Gardens.
14. H. Lingaraj Urs, Esq., Durbar Bakshi.
15. H. Nanjundaraj Urs, Esq., Superintendent, Amrut Mahal Department.
16. C. H. Yates, Esq., Superintendent, Government Press.
17. J. Weir, Esq., M.A., Principal, Maharaja's College, Mysore.
18. D. Sitarama Rao, Esq., B.C.E., Superintending Engineer, Bangalore.
19. B. P. Raghavalu Naidu, Esq., Executive Engineer, Palace Division, Mysore.
20. V. Rangaswami Iyengar, Esq., A.C.E., B.C.E., Executive Engineer, Water-Works Division.
21. G. Subbusami Iyer, Esq., B.A., L.T., Superintendent, Industrial School, Mysore.

PROSPECTUS OF THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION OF 1908.

INTRODUCTORY.

WITH the sanction of the Government of His Highness the Maharaja of Mysore, the Committee issue the following prospectus in connection with the Exhibition of 1908.

2. *Opening of the Exhibition.*—This year the Exhibition will commence on Wednesday, 30th September 1908, and close on Wednesday, 14th October 1908. The cattle show will begin on Tuesday, 6th October, and close on Thursday, 8th. From the experience of last year it may be observed that the show offers a good opportunity for people desirous of purchasing good specimens of Mysore cattle.

3. *Object of the Exhibition.*—The primary aim of the Committee is to impart to the Exhibition an educative character and to bring together articles, machinery, and processes the use of which it is desirable to bring to the notice of the raiyat, the artizan and the manufacturer by actual demonstration. But as the exhibition of solitary samples may not afford sufficient information and may not be attractive to the visiting public, articles intended for sale will also be admitted.

4. *Articles on sale* versus *samples.*—Articles on a large scale sent merely for sale will have to be kept in separate stalls and under the charge of the exhibitors or their agents. There is no objection to the sale of samples, but they will not be allowed to be removed from the Exhibition grounds till the termination of the show. Articles admitted for purposes of sale alone may be removed after purchase. But no article will be allowed to leave the Exhibition grounds without a gate pass

5. *Plan of the buildings.*—A plan of the Exhibition grounds and buildings and the extent of covered and open space available is appended this prospectus. Those who desire to have

special facilities for the sale of articles or demonstration of processes are requested to place themselves in communication with the Secretary to the Exhibition Committee.

6. *Lectures and Demonstrations.*—Lectures will be delivered by competent persons in English and Kanarese on subjects connected with industry, agriculture, health and sanitation, the value of agricultural implements and machines, their cost, construction and repair. Arrangements will also be made for holding a competition on the Exhibition grounds in ploughing and weaving and processes connected therewith. The exact time and place of the lectures and demonstrations will be announced later on by hand-bills and notices.

7. *Donations.*—The Committee would thankfully accept donations for awarding prizes or medals from individuals or Associations desiring to give an impetus to any special branch of agriculture or industry.

8. *Classification of Exhibits.*—The Exhibition of 1908 will be confined to the main groups and sub-heads indicated in the prize list subjoined to this prospectus.

9. *Open to all India.*—The Committee invite exhibits from all the Districts in the State as well as from outside. They also appeal to the various Agricultural Departments and Associations in other parts of India, Burma and Ceylon to help them with exhibits and suggestions.

10. *Judges.*—Leading raiyats and non-official gentlemen will be invited to assist the Committee in judging the exhibits.

11. *Admission fees for visitors.*—An admission fee of annas two per head will be levied each time a person enters the Exhibition buildings. There will be no season tickets, nor family tickets, nor special tickets at half rates for pupils. Only children in arms who are less than three years of age will be admitted free.

RULES AND REGULATIONS.

1. *Noxious Articles.*—Explosives or any substance noxious or dangerous will not be admitted by the Committee.

2. *Particulars re exhibits.*—Intending exhibitors are requested to send to the Secretary to the Exhibition Committee particulars of exhibits they intend to forward and the amount of space which their exhibits may take up in Form A appended to this prospectus. Printed forms may be obtained from the District, Divisional and Taluk offices, or from the Secretary to the Committee; plain paper of foolscap size may also be used provided all the headings in the form are properly copied and filled up.

3. *Applications from exhibitors.*—Applications in Form A should reach the Secretary to the Committee not later than 1st August 1908. Each application should contain a post card on which the address and post town of the exhibitor are legibly written.

4. *Lists from Taluks.*—Deputy Commissioners of Districts, Subdivisional Officers and Amildars of Taluks are requested to convene, as early as possible, a meeting of the leading artizans, raiyats and merchants residing within their respective charges, to explain to them fully the object and scope of the exhibition and to distribute to them forms of application, to have them filled up by intending exhibitors and to forward them to the Secretary to the Committee. This will give the Committee an idea of the total space required and enable the exhibitors to make a good choice of the exhibits by preventing a number of them from sending exhibits of the same quality and description.

5. *Articles not enumerated.*—The classified list of prizes will show the nature of articles which can compete at the Exhibition. Articles not specially enumerated in the price list may, however, be admitted by the Committee at their discretion.

6. *No fees to be charged for exhibits.*—No fees will be charged for the admission or registration of the exhibits or for the space allowed for them.

7. *Acceptance of exhibits.*—The Committee reserve to themselves absolute discretion as regards the acceptance and rejection of exhibits and the allotment of space covered or uncovered.

8. *Delivery of exhibits.*—Articles intended for the exhibition may be brought by the exhibitor or his agent or servant and delivered at the Exhibition ground or sent by post or railway or through the Deputy Commissioners of Districts.

9. *Payment of freight and transport charges.*—No exhibits in respect of which the necessary freight or transport charges have not been paid by the exhibitor, will be accepted by the Committee.

10. *List of particulars.*—All packages received or delivered and all implements and machinery intended for the Exhibition must bear a label specifying the name and number of exhibits and the registered number of the exhibitor and must be addressed to the Secretary. They must contain a list, in duplicate, showing the name or description of the article, its price,

the place of production or manufacture, name of the manufacturer or exhibitor. In the case of exhibits in the Agricultural section, essential particulars such as the season of sowing, the soil on which they are grown, the quantity of seed per acre, the manure used, whether any irrigation is required, the time required for the maturing of crop, the average yield per acre, and any other interesting details regarding cultivation should be given.

11. *Exhibits which have already won prizes.*—Exhibits which have won prizes or medals in the Mysore Exhibitions of 1906 and 1907 are precluded from competing for prizes though there is no objection to there being accepted for purposes of show or sale.

12. *Date of delivery of exhibits.*—Intending exhibitors are requested to send the exhibit so as to reach Mysore on the 10th September 1908, from which date the Committee will arrange to take charge of exhibits. **But no exhibits will be received after the 23rd September 1908.**

13. *Belated exhibits.*—Articles that are not delivered at the Exhibition Hall in the time fixed may be admitted at the discretion of the Committee subsequent to the dates mentioned in paragraph 12, but shall not be entitled to compete for prizes.

14. *Perishable articles.*—Vegetables, fruits, dairy produce, and other perishable articles, may, however, be delivered at the Exhibition Hall till 7 P.M., on 29th September 1908.

15. *Admission of exhibits.*—No exhibits will be admitted whithout a pass signed by the Secretary or members of the Committee on duty at the Exhibition grounds.

16. *Responsibility of exhibitors.*—Exhibitors will have to pay every expense of transit, delivery, fixing and removing their exhibits, and they must either personally or by their agents or servants superintend their reception and removal, in default of which the Committee reserve to themselves the right of doing whatever may be considered necessary at the expense of the exhibitor.

17. *Committee accept no responsibility.*—No responsibility will be accepted by the Committee as to any damage or loss howsoever occurring.

18. *Special facilities.*—Exhibitors are requested to mention in their applications whether they wish to illustrate practically any processes of manufacture or the working of any implement or machinery, and if so, to state briefly the nature of the demonstration and any special facilities they require.

19. *Special arrangement to be made at the exhibitor's expense.*—If the exibitors require any special arrangements to be made (or have to mount their machinery) they must carry them out at their own expense, but the Committee will be glad to give such aid as may be possible in the shape of getting skilled or unskilled manual labour at the exhibitor's expense. The expenses of demonstrating machinery and implements should be borne by the exhibitor except where special arrangements have been made with the Committee.

20. *Valuable exhibits.*—All valuable exhibits must be forwarded under the charge of an attendant.

21 *Exhibits unaccompanied by men in charge.*—Exhibitors who are unable to attend personally or send their agents in charge of exhibits may make special arrangements with the Committee for the exhibition of their goods on payment in advance in full of the estimated expense.

22. *Weighing of exhibits.*—The Committee entrust the work of receiving the exhibits to responsible officials. But as the goods are landed near the Exhibition grounds by special arrangement, it is not possible to weigh every consignment before taking delivery of it. So exhibitors are requested to take every possible precaution in packing their exhibits and to send to the Committee in time an accurate list of exhibits sent by them. Exhibitors who wish that their consignment should be weighed at the Railway Station before delivery should intimate their wish to the Secretary in time and remit in advance a special fee of one rupee on each consignment to be thus weighed.

23. *Acknowledgment of exhibits.*—Receipt of exhibits will be acknowledged by return of the duplicate list mentioned in paragraph 10 to the exhibitor duly signed by the Secretary No other kind of receipt will be sent. Any differences between the list and the articles actually received will be noted in the duplicate list.

24. *Free pass to exhibitors.*—In cases in which the owners themselves are in charge of exhibits, the necessary free pass will be given.

25. *Free admission to boná fide raiyats and artisans.*—Raiyats and artisans unable to pay fees, belonging to the Mysore State or from outside, who produce certificates of identification signed by their respective Taluk Officers in Form B appended to this prospectus, will be admitted free.

26. *Space for exhibits on sale.*—Accommodation will be found within the Exhibition grounds, as far as possible, for articles intended for sale. But those who wish to send articles on a large scale would do well to have temporary booths put up at their own cost in the Exhibition grounds, by previous arrangement with the Committee.

27. *Commission on sale.*—A commission of one anna in the rupee on sales of exhibits conducted in the Exhibition stalls and grounds will be levied by the Committee from all exhibitors.

28. *Articles on sale.*—Articles on sale or articles sold should in every case have cards attached to them notifying the same.

29. *Removal of exhibits.*—All exhibits must be removed within a week after the close of the Exhibition. Exhibits remaining after that time will be disposed of as the Committee deem fit. Perishable articles will be allowed to be removed at the option of the owners or purchasers within 24 hours after the opening of the Exhibition.

30. *Exhibits on loan.*—Works of art and articles of special merit including those of antiquarian interest will be thankfully received. Gentlemen willing to lend them are requested to place themselves in communication with the Secretary, or any of the members of the Committee who will inform them of the acceptance of the offer and will make necessary arrangements in connection with the exhibition of the articles.

31. *Exhibits belonging to any Department of Government.*—Articles or cattle exhibited by any Department of Government will not be eligible for money prizes or medals, but may be awarded certificates of merit. This rule does not preclude Government servants or pupils of Industrial Schools from competing for prizes if the exhibits are manufactured by themselves.

32. *Admission of live-stock.*—All cattle and sheep brought for the show will be located in a convenient place before the first selection and only such of the animals as are selected will be permitted to be picketed in the sheds provided at the show-yard according to breed, age and size, etc.

33. *Accommodation for cattle.*—Accommodation will be provided by the Committee free of cost for about 150 head of cattle.

34. *Grant for fodder.*—A sum of four annas will be given by the Committee for each head of cattle selected per day for fodder for the four days from 6th to 9th October (both inclusive).

35. *Admission to the show grounds.*—Only pass or ticket-holders will be allowed to the Show grounds, while the cattle are judged.

36.—*Animals which have won prizes.*—No animal which has won a prize in previous years in the Mysore Exhibitions will be eligible for a prize.

37. *Practical test.*—Working cattle may, at the owner's option, be subjected to a practical test as to their powers of draught. They must be the *bonâ fide* property of the exhibitor.

38. Single bullocks will also be tested both for riding and draught purposes at the owner's option.

39. *Caretaker.*—Each animal on lot competing separately must be in charge of a caretaker who will remain in charge of the exhibit and must be ready to lead it out at any time as required by the Committee.

40. *Distribution of prizes and medals.*—Prizes and medals will be distributed at the close of the Exhibition. This year it is proposed to hold a distribution of prizes in the Exhibition grounds on or about the 12th October.

41. *Number of Judges.*—The Judges in each class or group will not be less than three, but no prizes will be awarded unless in the opinion of the Judges the exhibits merit the reward. Judges cannot compete for prizes in classes or sections in which they are Judges.

42. *Photograph of articles exhibited.*—No article exhibited may be copied, photographed, drawn or reproduced in any manner without the special permission of the exhibitor and the Committee. General photographs of the stalls may, however, be taken with the permission of the Committee.

43. *Committee's decision final.*—The Committee have full power to make rules for the conduct of the Exhibition under these regulations and their decision is final in all cases.

44. *Acceptance of rules.*—All persons who become exhibitors shall be held to signify their assent to and acceptance of the foregoing rules and regulations, and also of such other rules as the Committee may hereafter issue, not inconsistent with these Regulations.

45. *Communications regarding the Exhibition.*—All communications regarding the Exhibition should be addressed to the Secretary to the Mysore Dasara Exhibition Committee and directed to Bangalore till 10th September 1908 and to Mysore after 10th September 1908.

REVENUE COMMISSIONER'S OFFICE,
2nd June 1908.

K. SUBBA RAU,
Secretary.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION, 1908.

CLASSIFIED LIST OF EXHIBITS AND PRIZES.

GROUP I.

[No prizes will be awarded unless the exhibits are truly worthy of them.]

APPLICATION FORM.

Date ——————— *1908.*

To

The Secretary,

Mysore Dasara Industrial and

Agricultural Exhibition,

Mysore.

Sir,

I wish to exhibit the articles as per particulars given in the enclosed form at the Mysore Dasara Industrial and Agricultural Exhibition to be held at Mysore in September 1908.

I consent to abide by the rules and regulations of the Exhibition Committee, and on being informed that my name has been enrolled as an Exhibitor, I shall be glad to furnish any further information required.

I beg to remain,

Sir,

Yours faithfully,

Signature of the intending Exhibitor ... ——————————

Address in full
- Town ——————
- Taluk ——————
- District ——————

FORM A.

The Mysore Dasara Industrial and Agricultural Exhibition, 1908.

Name of the article.	Description of the article.	Group and sub-head to which it belongs.	Name of Manufacturer or Exhibitor.	Place of manufacture (District, Taluk and Town).	Price of the article.	Whether it may or may not be sold at the Exhibition.	Covered or open space required.	Whether any special structure, stands, cupboards would be required, if so, what.	Whether any practical illustration of machinery is intended to be given.	Whether manual or animal labour would be required.	REMARKS.
1	2	3	4	5	6	7	8	9	10	11	12

I guarantee that the particulars given above are, to the best of my knowledge and belief, correct and accurate.

Signature of the Exhibitor.

FORM B.

Name of Taluk——————————

Date——————————*1908.*

This is to certify that——————————————

is a bona fide $\frac{\textit{raiyat}}{\textit{artisan}}$, *and as he is unable to pay fees and is likely to be benefited by seeing the Mysore Exhibition of 1908, he may be admitted free.*

$\frac{\textit{Amildar}}{\textit{Tahsildar}}$ *Officer in charge of Taluk.*

Seal of the officer if he has one.

LIVERPOOL COLONIAL PRODUCTS EXHIBITION, 1908.

No. 3397.—The 27th July 1908.—The following Resolution of the Government of India, Department of Commerce and Industry, is republished for general information:—

H. C. STREATFEILD,
Offg. Secy. to the Govt. of Bengal.

No. 6690—6711—8, dated Simla, the 16th July 1908.

RESOLUTION—By the Government of India, Department of Commerce and Industry.

THE following papers relative to the Colonial Products Exhibition to be held at Liverpool in 1908 are published for general information. The Government of India will not participate in the Exhibition.

THE NEXT COLONIAL PRODUCTS EXHIBITION WILL BE HELD AT ST. GEORGE'S HALL, LIVERPOOL, FROM DECEMBER 7TH TO DECEMBER 19TH, 1908.

THE publication of this Prospectus is dictated by a double purpose: to offer a *résumé* of the principal details of the late Colonial Products Exhibition, and also, by emphasising the record success obtained by it and by giving a recapitulation* of the many flattering notices and opinions concerning it, to point out the amount of encouragement that has been derived from it to proceed still further with the task of demonstrating the immense importance to this country of improved and extended trade relations with her Colonies.

* Not printed.

Judging from the cordial support extended to, and the amount of enthusiasm aroused by, the last four Exhibitions—the first undertakings of the kind ever organised in Great Britain outside the Metropolis—it is a reasonable presumption that another, even on a still more extended scale, offering a greater diversity and larger number of Colonial products, will achieve a still larger measure of success, and so promote the furtherance of a greater amount of commercial reciprocity between the Colonies and the Mother Country. It might be said *en passant*, that on all sides it has been agreed that the increase of business through the Liverpool Colonial Products Exhibition has been enormous, and no doubt H. R. H. the Prince of Wales recognised this fact when he graciously became a Patron.

The resources of our Colonies, mineral—agricultural and manufacturing—increase rapidly as the time goes on, and no year passes but finds the oversea portions of the Empire in a better position to help to the attainment of that object which it is the desire of every citizen to see realised—the establishment of the Empire on a self-contained and self-supporting basis, independent of supplies from alien lands, and powerful to hold its own by the aid of its own people and by that aid alone.

That this end can be accomplished there is little room for doubt, providing there be unanimity of feeling and mutual interests between the peoples of our Colonies and ourselves; and it is difficult to discover any action on our part more valuable, helpful, and effective than endeavouring, as far as possible, to offer to the people of this country opportunities of realising by personal inspection the vast commercial wealth of our Colonies, as illustrated by the number and extent of the commodities with which they are able to supply us.

With this object in view it is intended to hold the fifth Colonial Products Exhibition from December 7 to December 19, 1908, which shall be more extended in its scope than the last, and for this purpose every effort will be made to obtain direct from each separate Colony samples of each and every product it is able to supply.

With many months available for organisation, preparation, and communication with the various Colonial authorities, whose co-operation may be safely reckoned on, the President and Managers entertain sanguine hopes of producing a collection of Colonial Products which, for extent and diversity, has never before been gathered together in one place on any previous occasion. Sir Alfred L Jones, K.C.M.G., will again act as President.

Those Colonies desirous of obtaining space in this forthcoming important Exhibition should send in their application as soon as possible to the Joint-Managers at 14, Dale Street, or 21, Water Street, Liverpool, where a plan of the Hall can be seen and all information obtained.

RULES AND REGULATIONS.

1. The Exhibition will be open each day from 12 o'clock noon to 10 P.M., and will be confined to the Exhibition of Colonial Products, Machinery, Exports, Imports, etc.
2. The Managers reserve the right to decline any application, and no application will be entertained unless made on the proper form. The space will be allotted in the order in which application is made.

3. In the event of the applications being greater than the available space will accommodate, the Managers reserve the right of curtailing any Exhibit.

4. The charge for Exhibits are:—For stalls, 7 feet frontage by 6 feet, 3/6 per square foot. Office space in the building free. Special positions by arrangement, 50 per cent. of rent of Stall payable 7 days after allotment of space, the balance on or before November 7, 1908.

5. Exhibitors taking space for the Exhibition must fit up same at their own expense. By special arrangement with the Liverpool Corporation, machinery in motion will be allowed in the Exhibition. All work must be done to the satisfaction of the City Surveyor and Resident Electrical Engineer. Exhibitors will not be allowed to sub-let the whole or part of the space allotted to them.

6. No office shall be erected in any part of the Hall other than that specially allotted for the purpose by the Managers.

7. A Catalogue of Exhibits will be published, mainly compiled from the information given by Exhibitors.

8. All banners, decorations, and show-boards must be hung subject to the approval of the Managers, who may at any time remove those disapproved of. No Exhibitor shall be permitted to display Exhibits or show-boards in such a manner as to occasion inconvenience, deprivation of or injury to light, or otherwise disadvantageously affecting the display of other Exhibitors.

9. Only papers, price-lists, or advertisements relating to goods of the Exhibitor are allowed to be distributed from or exhibited at his own stand, and no pamphlets or advertisements may be distributed in any other part of the building.

10. No crate or packing case must come into the Hall, but all goods must be received and unpacked in the carriage entrance on the west side of the Hall, and carried to the stands. Exhibitors must provide their own staff at their own cost to unpack, place in position, keep in order, repack and remove their Exhibits, and in default the Managers may, at the expense ofthe Exhibitor, do whatever may be considered necessary, but this course will only be adopted as a last resource. The greatest care must be exercised in fitting up the stands.

11. Exhibitors' and attendants' tickets will be issued, and will be available for Exhibitors and the actual assistants or attendants only.

12. The Managers will take such precautions as they may consider advisable for the protection of all articles exhibited, but will not be responsible for any loss or damage occurring to any Exhibit or property of Exhibitors from fire. or any cause whatever, and all articles, from the time of their being placed in the Exhibition Buildings, shall be at the sole risk of the Exhibitors.

13. No nails or screws shall be driven in either the walls, pedestals, or flooring of the Hall, and every Exhibitor shall make good, at his own cost, all damage done by him or his employés

14. All matters in connection with the Exhibition not provided for by these regulations shall be settled or determined by the Managers, whose decision shall be final.

15. All inquiries during the Exhibition should be made at the Office of the Managers in the building, between the hours of 12 noon and 6 P.M

NOTICE.—In special cases the Joint-Managers are prepared to take over the complete arrangements for Exhibitors i.e. :--The erection of suitable stands ; receive, unpack, and display Exhibits ; supply suitable attendants, cleaners, etc., repack and return Exhibits.

LIVERPOOL COLONIAL PRODUCTS EXHIBITION, 1908.

APPLICATION FOR SPACE.

To the JOINT-MANAGERS,

The Colonial Products Exhibition (1908),

14, Dale Street, and 21, Water Street, LIVERPOOL.

Address ______________________

ORDERED that the foregoing papers be published in the Supplement to the *Gazette of India* for general information, and, that copies be forwarded to the Local Governments and Administrations named in the margin for information and with the request that they may be published in the Local Gazette.

The Government of Madras.
" " " Bombay.
" " " Bengal.
" " " the United Provinces.
" " " the Punjab.
" " " Burma.
" " " Eastern Bengal and Assam.
The Hon'ble the Chief Commissioner, Central Provinces.
The Chief Commissioner of Coorg.

Ordered, also, that a copy be forwarded to the Director-General of Commercial Intelligence, the Chief Commissioner of Ajmer-Marwara, and the Honourable the Agent to the Governor-General and Chief Commissioner, North-West Frontier Province, for information, and to the Foreign Department, for information and communication to Native States.

Ordered, also, that a copy be forwarded to all Chambers of Commerce for information.

R. ROBERTSON,

Secretary to the Government of India.

PRELIMINARY FORECAST OF THE JUTE CROP OF BENGAL, 1908.

THE following note is published for general information.

F. W. DUKE,

Offg. Chief Secy. to the Govt. of Bengal.

The 27th July 1908.

DEPARTMENT OF AGRICULTURE, BENGAL.

PRELIMINARY FORECAST OF THE JUTE CROP OF BENGAL, 1908.

[On an average of the five years ending 1905-06, the area under jute in the territory which this forecast relates has represented some 16·6 per cent. of the total area under jute in British India.]

IN accordance with the orders of Government, this forecast deals only with the estimated area sown. It gives also a general survey of prospects, but without any reference to the probable outturn either in percentage figures, or in bales. The information upon which the forecast has been framed was submitted by the Collectors of the different districts between the fourth and the seventh of July. The information, therefore, refers to the area sown before the end of June and no account has been taken of the effect of climatic conditions on the crop since that date.

2. *Acreage.*—The estimated area sown during the current and four preceding years is given below:—

1904	505,900
1905	569,300
1906	780,400
1907	931,200
1908	574,300

In addition there was an area of 32,000 acres in 1907 in the State of Kooch Behar and the area sown this year is estimated at 30,000 acres.

3. *Weather conditions.*—Purnea is by far the most important jute-growing district in Bengal. It produces from one-third to one-fourth of the total crop. The other districts of any importance are Hooghly, Howrah, 24-Parganas, Nadia, Murshidabad and Jessore. The weather conditions in Purnea were, on the whole, favourable. The Kissengunj sub-division got 1½ inches of rain in the month of March, 3 inches in the first week, and 3 inches in the fourth week of May. The districts round Calcutta were

less fortunate: they got no rain in March, very little in April, and the May rainfall was not at all general. It is reported from Howrah that the heavy rains in the end of June damaged the crop and it is probable that some damage was caused in other districts after the submission of the returns.

The season has, therefore, on the whole, been unfavourable for sowings. In addition to this, it is reported from many of the districts that the cultivator has sown more rice and less jute, as the price of the former was very high last year and that of the latter low.

Below is the usual statement of the rainfall in the seven principal jute-growing districts from March to June for the current and the four years preceding:—

Name of district.		1904.	1905.	1906.	1907.	1908.
Purnea	...	15·20	16·79	15·54	16·87	10·97
Murshidabad	...	20·93	19·96	11·71	20·06	16·48
24-Parganas	...	22·22	18·80	14·01	27·75	22·58
Nadia	...	21·81	23·57	13·36	24·87	24·45
Jessore		29·04	21·78	17·26	29·19	24·74
Howrah	...	19·91	17·18	13·06	27·18	28·05
Hooghly	...	19·15	16·92	12·52	24·70	22·09

4. *District Returns.*—The total area under jute, inclusive of that in the State of Cooch Behar, is estimated at 604,300 acres. This shows a decrease of 37 per cent. on the area sown last year, viz., 963,200 acres. The Collectors of Murshidabad, Bhagalpur, Cuttack, Midnapur, Hooghly, Champaran and the Sonthal Parganas report that sowings were still going on at the end of the last month, but the extra area sown is not likely to make much difference in the total.

5. *Conditions and prospects.*—The crop in Purnea, Hooghly, Nadia, Jessore, Khulna and in parts of Murshidabad is reported to be fair. It is poor in Howrah and parts of Midnapur, 24-Parganas and Murshidabad.

6. *General.*—The District Officers report that very little jute is left in their districts from last year's harvest.

7. *Combined Forecast of Bengal and Eastern Bengal and Assam.*—The Director of Agriculture of Eastern Bengal and Assam reports that the area under jute last year is now estimated at 3,010,800 acres. His forecast of the area sown this year is 2,263,900 acres, or 25 per cent. below last year's estimate. Taking the two Provinces together, the area sown this year is calculated to be 2,868,200 acres, a decrease of 28 per cent. on the revised estimates for last year.

CALCUTTA,
The 15th July 1908.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

(*The following extracts from the Weather and Crop Report received on the 14th July are printed for information.*)

Purnea.—Rainfall 0·50; jute becoming stunted on account of drought.

Burdwan.—Rainfall—Sadar 14·36 inches. Heavy rain has done some damage to jute in thanas Jamalpur and Raina.

Chinsurah.—Rainfall—Sadar 9·67 inches; prospects of jute fair; weeding of jute going on.

Nadia.—Rainfall 5·03; excessive rain in Meherpur subdivision has damaged jute on lowlands.

Jessore.—Rainfall 8·86. The recent rain has done damage to jute on lowlands of the Sadar, Jhenidah, Magura and Narail subdivisions.

Khulna.—Rainfall—Sadar 8·24 inches. Heavy rainfall of the week affected jute crop to some extent.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

CALCUTTA,
The 15th July 1908.

APPENDIX I.

Preliminary Forecast of the Jute Crop of Bengal, 1908.

Division.	District.	Total area of the district.	Estimated total area under cultivation.	Approximate area sown last year (1907).	Estimated area sown this year (1908).	Whether much, little, or no jute remains in the district from the crop of the year 1907.	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the sowing of the crops was begun this year.	Remarks by District Officers.	Remarks by the Director of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13
		Acres.	Acres.	Acres.	Acres.		Acres.		Acres.			
BURDWAN ...	Burdwan ...	1,721,900	1,304,200	21,700	12,800	Little ...	18,749	1889 to 1892 and 1903 to 1907.	132	Latter part of April to end of May.	The weather and rainfall were not altogether favourable for the growth of the crop. Sowings were slightly late. They have been completed. The crop, is expected to be worse than that of last year. Owing to the fall in the price of jute and the rise in the price of rice more lands are being prepared for paddy cultivation: hence the decrease in the area under jute. The weather was not favourable at the time of sowing.	
	Midnapore ...	3,319,040	2,190,600	10,800	10,400	Very little in Sadar and Tamluk little in Contai and about ½ remains undisposed of in Ghatal.	35,342	1893 to 1898.	20	Whole of May.	The weather and rainfall were favourable in the Sadar Sub-division in two thanas of Contai but not favourable in, Ghatal and Tamluk. The condition of the crop is good at the Sadar Sub-division, fair in two, good in two and poor in the remaining four thanas of Contai, poor in Tamluk and bad in Ghatal, owing to excessive rain. The sowings were a little late in the Sadar Sub-division and late in the Contai, Tamluk and Ghatal Sub-divisions. Sowings are still going on in places except in Ghatal where they are completed. In the Sadar Sub-division the crop is expected to be better than last year's crop. In the Contai Sub-division it is better in two thanas, about the same in one and worse in the rest. The decrease in the area sown this year in the Contai Sub-division is due to want of rain at the time of sowing in Ghatal, it is due to the fall in the price of jute and to the extension of paddy cultivation.	

Division.	District.	Total area of the district.	Estimated total area under cultivation	Approximate area sown last year (1907).	Estimated area sown this year (1908).	Whether much, little, or no jute remains in the district from the crop of the year 1907.	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the sowing of the crop was begun this year.	Remarks by District Officers.	Remarks by the Director of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13
		Acres.	Acres.	Acres.	Acres.		Acres.		Acres.			
Burdwan—concld.	Hooghly ...	761,310	445,900	65,000	51,900	Little ...	Not cadastrally surveyed.			Middle and end of May.	The rainfall and weather were not favourable. The condition of the crop is fair. Sowings were late. In the Sadar and Serampore Sub-divisions sowings have been completed, but in the Arambagh Sub-division they are still going on. The crop of this year is expected to be the same as that of the previous year. Absence of rain in the early part of the season is the cause of decrease in the area sown this year.	
	Howrah ...	396,400	250,600	61,700	33,900	A little remains in the jurisdiction of Amta thana.		...	...	15th April to 31st May.	The weather and rainfall were not favourable for the crop. Its condition is poor. The date of sowing was early in the Sadar Sub-division and normal in the Uluberia Sub-division. Sowings have been completed. The decrease in area is due to want of rain in the beginning of the season and to the cultivators not getting adequate prices last year. Also to high prices in rice which have induced the raiyats to reserve their fields for rice cultivation this year.	
	24-Parganas ...	3,100,533	1,679,700	86,400	59,900	Large quantity in the Basirhat subdivision.	...	...	...	May ...	The weather and rainfall were not favourable. The condition of the crop is poor in all the Sub-divisions except Basirhat and a part of Barasat where it is fair till now. The sowings were late everywhere in the district. They have been completed. The crop is expected to be worse than that of last year in all the Sub-divisions except Basirhat from where it is reported to be better than last year although the area sown is less. Unusually high prices of food-grains, the low price of jute, want of timely rainfall and excessive heat account for the decrease in the area sown this year.	

	Nadia ...	1,787,520	1,043,800	93,000	42,900	about 20 per cent. of last year's crop.	Not cadastrally surveyed.			May ..	The weather and rainfall were not favourable. The condition of the crop is fair. The sowings were late. They have been completed. The crop of this year is expected to be worse than that of last year owing to the late heavy rain-fall. The lands have been submerged in places. The decrease in the area sown is due to low prices obtained last year.
	Murshidabad	1,371,520	985,500	95,400	30,600	Little ...	...	...	...	May ...	The weather and rainfall were not favourable. The condition of the crop is poor in some tracts and fair in others. Sowings were late. They are going on. The crop is expected to be worse than that of last year. Decrease in the area is due to want of rain.
	Jessore ...	1,872,153	1,191,000	148,800	49,800	A small quantity.	...	...	...	April and May.	The weather and rainfall were not favourable. The condition of the crop is fair. Sowings were late. They have been completed. The crop is expected to be better than that of last year. The decrease in the area sown this year is due to the fact that the high prices of food-grains and the low price of jute last year have induced the cultivators to grow paddy in the place of jute.
	Khulna ...	3,049,016	670,000	37,500	16,700	Some ...	85,522	1903 to 1905.	614	15th May	The weather and rainfall were unfavourable for the growth of the crop in the Sadar and Bagerhat Sub-divisions, but not unfavourable in the Satkhira sub-division. The present condition of the crop appears to be fair. The sowings were late this year. Sowings have been completed. The crop is expected to be worse in the Sadar and Bagerhat sub-divisions and better in the Satkhira sub-division in comparison with the crop of last year. The decrease in the area sown this year is due to the fall in the price of jute and to the rise in that of paddy. The cultivators have sown more lands with paddy this year than jute.
PATNA ...	Champaran ...	2,259,840	1,447,600	5,800	2,000	No jute ...	2,259,840	1892 to 1899.	606	Beginning of February and March.	The weather and rainfall were very unfavourable, owing to drought. The condition of the crop is poor for want of timely rain. Sowings were late and in some parts had to be repeated. They are still going on in the Bettiah Subdivision, but completed in the Sadar Subdivision. The crop is expected to be much worse owing to late sowing and want of rain. The decrease in the area sown this year is due to many indigo factories having given up experimental cultivation and short sowings due to drought.

Division.	District.	Total area of the district.	Estimated total area under cultivation.	Approximate area sown last year (1907).	Estimated area sown this year (1908).	Whether much, little, or no jute remains in the district from the crop of the year 1907.	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the sowing of the crop was begun this year.	Remarks by District Officers.	Remarks by the Director of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13
		Acres.	Acres.	Acres.	Acres.		Acres.		Acres.			
PATNA—*concluded.*	Muzaffarpur ...	1,942,400	1,627,000	4,800	1,800	Little ...	1,942,400	1892-93 to 1898-99.	500	From February onwards.	The weather and rainfall were generally favourable. The condition of the crop is fair. Sowings were normal. They have been practically completed. The crop is expected to be worse than that of last year. The decrease in the area sown this year is due to the unfavourable condition both for growth and retting, to poor prices obtained last year and to a general disbelief as regards the suitability of the crop to the district.	
BHAGALPUR	Bhagalpur ...	2,704,640	2,072,300	6,700	6,700	Little ...	1,229,440	1902 to 1904.	151	Middle of June.	The weather and rainfall were favourable. The condition of the crop is good. The sowing was normal, little early in the Supaul Subdivision. It is still going on. The crop is expected to be better than that of last year.	
	Purnea ...	3,196,153	1,694,400	264,900	234,000	Very little	2,506,346	1901-02 and 1904-05.	98,903	Last week of April.	The weather and rainfall were favourable. The condition of the crop is fair. The sowings were a little late for want of rainfall; they were completed in May. The crop is expected to be a little inferior to that of last year. The heavy fall in the price of jute during the last year has discouraged cultivators from sowing this crop, the price fetched by jute being less than that fetched by rice.	
	Darjeeling ...	744,960	164,500	3,600	3,100	Very little	209,519	1897-98 and 1901-02.	2,330	From the beginning of April.	The weather and rainfall were not very favourable. The condition of the crop is fair. Sowings were late. They have been completed. The crop is expected to be worse in comparison with that of last year. The decrease in the area sown is due partly to the fall in the price of jute last year and partly to the want of rain at the time of sowing.	

BHAGALPUR—*concluded.*	Sonthal Parganas.	3,840,800	1,545,300	8,900	1,200	Very little	3,272,009	1889 to 1903-04.	1,245	Middle of May.	The weather and rainfall were not favourable. The condition of the crop is poor. Sowings were late. They have been completed except at Sahebganj in the Rajmahal Sub-division. The crop is expected to be worse than that of last year. The decrease in the area sown is due to want of timely rain and the low price at which jute sold last year. In the Rajmahal Sub-division, many cultivators have substituted other crops for jute this season owing to the latter cause.
ORISSA	Cuttack ...	2,338,500	1,323,600	17,600	13,900	A small quantity.	2,068,457	1888 to 1896.	652	15th May	The weather and rainfall were not favourable for the growth of the crop. The crop is being sown. The sowings were late for want of rain. They are still going on. As the sowings are still going on, the crop of this year cannot be expected to be as good as that of last year. The decrease in the area is partly due to want of timely rain and largely to the low price of jute. There are still considerable stocks in the mufassil. A larger area will go down under paddy this year.
	Balasore ...	1,334,368	932,200	8,400	3,600	Little ...	1,066,778	1891-92 to 1894-95.	138	15th May	The weather and rainfall were unfavourable to the growth of the crop. The condition of the crop is fair. Sowings were normal and have been completed. The crop of this year is on the whole better than the crop of last year. The decrease in the area sown is due to want of seasonable rain.
	Total Bengal ...	35,331,108	20,049,100	931,200	574,300						
	Add for Cooch Bihar.	...	...	32,000	30,000

NOMINATION OF A MEMBER OF THE BENGAL LEGISLATIVE COUNCIL ON THE RECOMMENDATION OF THE DISTRICT BOARDS OF THE ORISSA DIVISION.

RESOLUTION—No. 4070A.

APPOINTMENT.

Dated Calcutta, the 28th July 1908.

THE seat in the Bengal Legislative Council of the Hon'ble Babu Jogendra Chandra Ghose, who was nominated as the representative of the District Boards of the Presidency Division on the 23rd October 1906, will be vacated on the 22nd October 1908.

2. In paragraph 5 of the Resolution of this Government, No. 1553J., dated the 25th March 1893, it was prescribed that District Boards should be grouped together, Division by Division, and that District Boards within each divisional area should take it in turns to exercise the privilege bestowed upon them of recommending a person for nomination to the Council. In the same paragraph, a sketch was given of the form which the rotation would probably assume, but it was mentioned that the Lieutenant-Governor could not bind himself or his successors as to the exact order in which the privilege would in future be exercised.

3. As there will still be five Indian non-official members representing Bengal proper on the Council, when the Hon'ble Babu Jogendra Chandra Ghose vacates his seat, the Lieutenant-Governor has decided that the District Boards of the Orissa Division, which have not been represented on the Legislative Council since 1902, should be allowed the privilege of recommending a person for nomination to the Council in order to fill the vacancy. A notification will, therefore, be published in the *Calcutta Gazette* specifying the District Boards of the Orissa Division as the group of Boards on whose recommendation the Lieutenant-Governor will make a nomination to the seat.

4. The following statement shows the District Boards which will send delegates to vote for a person to be recommended for the vacant seat, and the number of votes assigned to them according to the scale shown in paragraph 5 of the Resolution of this Government No. 2307A., dated the 31st March 1897:—

DIVISION.	District Boards.	Ordinary income (1906-07).	Number of votes to be recorded by the representatives.
		Rs.	
Orissa ...	Cuttack	1,48,028	3
	Balasore	79,745	2
	Puri	70,642	1
	Sambalpur	64,291	1

5. Under Rule IV of the Regulations framed by the Governor-General in Council with the approval of the Secretary of State under section 1 (4) of the Indian Councils Act, 1892, for Bengal, the Lieutenant-Governor desires that the Commissioner of the Orissa Division will at once address the Chairmen of the District Boards enumerated in the above list, requesting them (*i*) to convene a special meeting of their Boards, at which one member of the Board should be selected to represent them for the purpose of making the recommendation for the seat in Council, and (*ii*) to submit the names of any candidates for the Council who may offer themselves for recommendation.

6. The period of three months laid down in Rule VII of the Regulations as that within which a recommendation shall be made to the Lieutenant-Governor will run from the date on which the Commissioner of the Division issues his request to the Chairmen of the District Boards.

7. All candidates for the Council should be proposed and seconded by two members of one of the District Boards included in the group; and their names, addresses and qualifications, with those of their proposers and seconders, should be reported to the Commissioner by the Chairman of the Board to which the proposer and seconder in each case belong, so as to reach him not later than a month before the date fixed for the appointment of a representative under Regulation V (c), which date should at the same time be notified to the Commissioner. It will be the business of each Chairman to see that this is done.

8. The Commissioner should enter the names of candidates who have been duly proposed and seconded, with those of their proposers and seconders, and the other particulars above noted, as they reach him, in a list to be kept for the purpose; and he should circulate this list to all District Boards included in the group, so as to reach them before the date fixed for the appointment of a representative. On the date on which the meeting for the purpose of appointing a representative is held, the list of candidates mentioned above should be circulated to each member present at the meeting. It will rest with the District Boards, if they see fit, to give clear and definite instructions to their representatives as to the way in which they should vote, that is, as to the candidate for whom they should vote, declaring the name of the candidate to whom all their votes should be given or, if to be given to more than one candidate, the order and manner in which such votes should be given.

9. As soon as the representatives have been selected, they will be called upon by the Commissioner of the Division to meet together on an early and convenient date, with special reference to the limit imposed by Regulation VII of the Regulations, and at such convenient place as he may specify, for the purpose of electing, by a majority of votes, a person whom they will recommend to the Lieutenant-Governor to be nominated as a member of the Council.

10. The electoral representatives present at this meeting shall elect one of themselves to be Chairman, and he shall preside and be responsible for the fair and proper conduct of the voting.

11. The names of all candidates entered on the list mentioned above, together with those of their proposers and seconders, shall be read out by the Chairman, and the representatives shall then proceed to vote. The person elected must obtain a majority of the votes of the representatives present. If on the occasion of the first vote an absolute majority is not obtained, the name of the candidate who obtains the least number of votes shall be withdrawn from the election, and another vote shall then be taken for the remaining candidates, and so on, until an absolute majority is obtained.

12. The Chairman of the meeting shall without delay report to the Commissioner of the Division the name of the person elected, with the number of votes obtained, and any other information which it may appear desirable to communicate, and he shall, on behalf of the meeting, recommend to the Lieutenant-Governor the nomination to the Council of the person so elected. The Commissioner shall submit the report from the Chairman of the meeting, with any observations he may wish to add, to the Chief Secretary to the Government, by whom the recommendation will be submitted to the Lieutenant-Governor.

13. Attention is drawn to Rule VI of the Regulations framed by the Governor-General in Council with the approval of the Secretary of State, which runs as follows:—

VI.—It shall be a condition in the case of any person to be recommended by a Municipal Corporation or group of Municipal Corporations that he shall be a person resident within the Municipality or the District in which it is situated, or in some one of the Municipalities constituting the group or of the districts in which they are situated.

A similar condition shall also apply to persons to be recommended by District Boards.

Explanation.—A person is not "resident" within the meaning of this Rule unless he has a place of residence in the locality concerned, and such practical connection with that locality as qualifies him to represent the inhabitants thereof.

If at any time the question is raised whether a person proposed for election is "resident" within the meaning of this rule, the question shall be referred to, and decided by, the Local Government, whose decision shall be final.

Under this rule it is not necessary that the person recommended should be a member of any District Board concerned, but he must be resident within the Division from which the recommendation is made. Subject to this condition, the rules declare no limit of qualification.

14. It is desirable that the subsidiary arrangements now sanctioned shall, as far as possible, be given effect to by the District Boards concerned with the minimum amount of official interference. The Divisional Commissioner and the District Magistrates will, of course, afford any assistance which may be required, and will do their utmost to facilitate the smooth working of the elections; but Government officers are forbidden to take part, directly or indirectly, in the election by canvassing, influencing votes, or otherwise interfering with the free choice of the District Boards. No indication should be given by any official member of any of the District Boards concerned as to the manner in which he himself intends to vote.

ORDERED that a copy of this Resolution be furnished to the Commissioner of the Orissa Division, for information and guidance, and for communication to the District Boards in his Division.

ORDERED also that a copy be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

F. W. DUKE,

Offg. Chief Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 27th July 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	1·19	7	7	Rainfall at Kalna 1·45, Katwa 2·36, and Raniganj 3·33 inches. Transplantation of winter rice going on. Jute and other crops doing well. No cattle-disease. Fodder and water sufficient.
2	BIRBHUM ...	1·41	7	7	Rainfall at Rampurhât 2·15 inches. Weather seasonable. Transplantation of paddy continuing. Fodder and water sufficient.
3	BANKURA ...	1·34	6½	6½	Rainfall at Vishnupur 3·89 inches. Weather seasonable. Transplantation of winter rice going on. Prospects of crops good. Persons gratuitously relieved on the 24th instant—men 244, women 709 and children 254—total 1,207. Orders issued to close the test-works temporarily. Condition of agricultural stock fair. No cattle-disease. Common rice selling at 5 to 6½ seers a rupee in the affected area.
4	MIDNAPORE ...	0·98	6	6	Rainfall at Contai 0·65, at Tamluk 2·11, and at Ghatal 6·48. Transplantation of paddy progressing except in Daspur owing to floods. Condition of jute fair and that of sugarcane good. Common rice selling at 7 seers per rupee at Contai and Ghatal, and at 6½ seers per rupee at Tamluk.
5	HOOGHLY ...	0·77	6½	6⅜	Rainfall general. Weather cloudy. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute, *aus* paddy and sugar-cane fair. Weeding of jute and *aus* paddy and transplantation of *haimantik* paddy continuing. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	4·70	6¾	6½	Weather unsettled. Rainfall at Ulubaria 7·68. Floods in the Damodar and Rupnarayan apprehended at Ulubaria. Transplantation being pushed on. Prospects of jute not very favourable. Prospects of *aus* paddy at Ulubaria favourable. Condition of agricultural stock good. Fodder sufficient. Common rice selling at 7½ seers a rupee at Ulubaria.
7	24-PARGANAS	5·12	6¾	6¾	Weather seasonable. Rainfall sufficient everywhere. Condition of jute not favourable, partly damaged by recent rain in Basirhat and Diamond Harbour. Common rice selling at 6½ seers per rupee at Barasat, 6¾ seers at Basirhat, 6⅜ seers at Diamond Harbour and 7 seers at Barrackpore.
8	NADIA ...	2·12	6⅝	6⅝	Rainfall at Ranaghat 0·99, Chuadanga 0·18, Meherpur 1·35 and Kushtia 0·27 inches. Prospects of *aus* paddy fair and that of *aman* paddy good. Jute on high lands doing well. Prospects of jute on low lands not improved. Weeding of jute continuing. Prices of staple food-grains stationary. Stocks of food-grains insufficient. Scarcity prevalent in the Meherpur subdivision. Condition of cattle fair. Fodder barely sufficient. Persons attending test-works on the 20th—2,764 men only. 2,450 persons given gratuitous relief during the week. Total weekly cost being about Rs. 884.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	1·39	7	7	Rainfall at Lalbagh 0·59, Kandi 1·09 and Jangipur 0·62 inches. Weather hot and cloudy. Prospects of *bhadoi* crops favourable. *Bhadoi* paddy being harvested in Lalbagh. Condition of jute good. Weather favourable for jute in Jangipur. Transplantation of *aman* paddy going on. Stocks of food-grains not likely to be sufficient. Condition of agricultural stock fair. No cattle-disease. Fodder and water sufficient.
10	JESSORE ...	0·82	7	7	Rainfall at Magura, 0·95 Bangaon 0·91 and Narail 0·66, inche. Wéather seasonable. Transplantation of *aman* paddy and weeding of *aus* paddy going on. Condition of jute not favourable. Stocks of food-grains getting exhausted. Prices of food-grains stationary. High prices continuing. Condition of agricultural stock good on the whole. Cattle-disease reported from the Narail subdivision. Three hundred and eight persons employed on District Board test-works and 2,871 persons being given gratuitous relief.
11	KHULNA ...	1·51	8½	8½	Rainfall at Satkhira 1·85 and Bagerhat 1·70 inches. Rainfall general. Weather seasonable. Prices of staple food-grains stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. No apprehension of famine at present. Prospects of standing crops fair and that of jute not favourable. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	0·46	7½	7½	Weather hot and cloudy. *Bhadoi* crops doing well *Mandua* being transplanted. More rain urgently wanted for transplantation of paddy. Sugarcane promising well. Prices of food-grains almost stationary. Food-stocks likely to be sufficient if not largely exported. Condition of cattle good. Fodder and water sufficient. *Makai* not available.
13	GAYA ...	0·82	8½* 9½†	8* 9†	Rainfall during the week almost general, but scanty everywhere except Aurangabad. Weather cloudy, later hot. Sugarcane promising well. Prospects of *bhadoi* crops good so far. Transplantation of paddy going on, but more rain badly wanted for it. Prices almost stationary with a slight fall at Sadar. Cattle-disease reported from some villages in the Nawadah subdivision. Fodder and water ample.
14	SHAHABAD ...	1·05	8 10†	8	Rainfall at Buxar 0·27, Bhabua 1·20, Sasaram 1·21, and Dehri 2·40 inches. Sugarcane doing well. Sowing of *bhadoi* crops nearly finished. Transplantation of *marua* in progress. More rain wanted for paddy seedlings. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Agricultural stock normal. Cattle-disease reported from a village in thana Kharghahar. Fodder and water sufficient.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station	Price of common rice in seers, per rupee. This week.	Price of common rice in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
15	SARAN ...	0·04	8 9*	8 10*	Weather hot. Weeding of *bhadoi* paddy going on. Rain urgently wanted. Prices of staple food-grains stationary. Food-stock resources external. Agricultural stock in good condition. Cattle-disease reported in village Kanakpura. Fodder and water, sufficient.
16	CHAMPARAN ...	Nil	8 $10\frac{1}{4}$*	8 11*	Rainfall at Bettiah 0·23 inches. Weather very hot sometimes cloudy. Weeding of *bhadoi* crops and transplantation of paddy going on. More rain wanted. Prospects of jute and sugarcane fair. Condition of agricultural stock good. No cattle-disease reported. Fodder and water sufficient.
17	MUZAFFARPUR	Nil	$8\frac{1}{4}$ $10\frac{1}{4}$*	$8\frac{1}{4}$ $10\frac{1}{4}$*	Rainfall at Hajipur 0·51 inches. Weather hot and occasionally cloudy. Prospects of standing crops generally fair, but more rain badly wanted. Common rice and maize selling at $7\frac{3}{4}$ and $9\frac{1}{2}$ seers per rupee respectively at Hajipur and $7\frac{3}{4}$ and $10\frac{1}{2}$ seers per rupee respectively at Sitamarhi. Transplantation of paddy and *marua* and sowing of the *bhadoi* crops still continuing where possible. Scarcity not apprehended. Agricultural stock in good condition. No cattle-disease reported. Fodder and water sufficient.
18	DARBHANGA ...	0·13	$8\frac{9}{16}$ 11*	$8\frac{1}{4}$ 12*	Weather very hot. Very little rainfall during the week. Want of rain retarding progress of agricultural operations. Transplantation of paddy and weeding of *bhadoi* paddy going on. No apprehension of scarcity. Agricultural stock sufficient. Cattle-disease reported in three villages in thana Banipati and one village in thana Phulparas. Fodder and water available.
19	MONGHYR ...	Nil	7 9*	7 9*	Weather seasonable. Sowing of *bhadoi* crops finished. Transplantation of paddy going on. Rain badly wanted. Prices of food-grains stationary. Fodder and water sufficient. Agricultural stock good. No cattle-disease reported.
20	BHAGALPUR ..	0·31	$8\frac{4}{16}$ $10\frac{1}{8}$*	$8\frac{4}{16}$ $9\frac{1}{2}$*	Weather hot; at times cloudy. More rain urgently wanted for standing crops. Prospects of jute in Madhipura good. Cattle-disease reported from three mauzas in Supaul.
21	PURNEA ...	0·21	8	8	Weather hot and occasionally cloudy. Rain very badly wanted. Transplantation of *aghani* paddy being retarded everywhere. Both *bhadoi* and jute suffering for want of rain. Condition of agricultural stock good. No apprehension of scarcity yet. Cattle-disease reported from Forbesganj thana. Fodder and water sufficient. Common rice selling at 8 and $7\frac{3}{4}$ seers a rupee at Araria and Kishanganj respectively.

* The figures indicate the price of maize in seers per rupee.

Puddling of paddy going on in Hindol, Dhenkanal, Daspalla, Mourbhanj, Athgarh, Ranpur and Nayagarh. *Behura* operation (reploughing) being carried on in Bonai, Keonjhar and Baramba Transplantation going on in Bonai, Narsingpur, Hindol, Pal Lahera, Dhenkanal, Keonjhar, Daspalla, Mourbhanj, Talcher and Ranpur. All crops in Athmallik, paddy plants in Narsingpur and Mourbhanj, sugarcane in Narsingpur, Hindol, Dhenkanal, Athgarh, Boad' Kalahandi, Ranpur and Nayagarh, cotton in Hindol, Ranpur and Patna, *beali, swan* and *saradh* in Dhenkanal, Indian-corn and *gora* paddy in Keonjhar, *guluchi* and maize in Talcher and *kodua* in Ranpur are doing well. Agricultural stock, fodder and water sufficient. Price of rice varying from 6 seers in Rairakhol, Athgarh and Keonjhar and 6½ seers in Rairakhol to 10 seers in Talcher and 11 seers in Patna.

* The report is for the week ending the 18th July 1908.

GENERAL SUMMARY.—Rain was heavy in Howrah, the 24-Parganas, Sambalpur and parts of Midnapore, moderate in Darjeeling, Angul, Hazaribagh and Manbhum and light in other districts except Monghyr, where there was no rain during the week under report. Transplantation of winter rice and weeding of *bhadoi* crops are going on, but more rain is urgently wanted in Bihar for standing crops and for transplantation of winter paddy, especially in Darbhanga and Purnea. *Bhadoi* paddy and jute are reported to be suffering for want of rain in Purnea. Prospects of the sugarcane crop are fair. Condition of jute is fair, but unfavourable on low lands in Howrah and in most districts of the Presidency Division. The price of common rice is stationary in most districts; it has slightly risen in Hooghly, Patna, the Sonthal Parganas and Ranchi and fallen in Howrah, Gaya and Darbhanga. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. Supply of fodder and water is sufficient throughout the Province. Cattle-disease is prevalent in Jessore, Gaya, Shahabad, Saran, Darbhanga, Bhagalpur, Purnea, Sambalpur, Hazaribagh, Ranchi and Palamau Gratuitous relief was given to 29,801 persons, of whom 15,889 were in Orissa. Test-works in Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 8,245 persons. Test-works in Bankura have been temporarily closed. The number of persons on famine relief works in Ranchi was 7,262.

	Inches.
The total fall of rain from 19th to 25th July 1908	5·53
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·69
The total fall from 1st January to 25th July 1908	55·14
The average fall of the corresponding period for 24 years, Surveyor-General's Office	31·92

The mean pressure, temperature, etc., are deduced from the traces of the Knudsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain.

LIBERALITY OF BABU VIHARI LALA MITRA.

No 1370Medl., dated Calcutta, the 29th July 1908.

From—C. E. A. W. OLDHAM, ESQ., Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Presidency Division.

I AM directed to acknowledge the receipt of your letter No. 85L.S.-G., dated the 14th July 1908, in which you report that Babu Vihari Lala Mitra, of Bagbazar, has placed, at the disposal of Government, a sum of Rs. 10,000 to be devoted to some suitable work of public utility. You suggest that the amount be credited to the fund which is being raised for the construction of a surgical ward in connection with the Sambhu Nath Pundit Hospital at Bhowanipur.

2. In reply I am to request you to be so good as to convey to the donor an expression of the Lieutenant-Governor's appreciation of his liberality and public spirit. The money may be credited as proposed by you.

REPORT ON THE ADMINISTRATION OF THE SALT DEPARTMENT IN BENGAL DURING THE YEAR 1907-08.

NOTIFICATION.

No. 534S.R.—The 31st July 1908.—The following extracts from the Report of the Commissioner of Excise and Salt, Bengal, on the Administration of the Salt Department in the Province during the year 1907-08, and from the letter of the Board of Revenue reviewing the report, are published for general information.

C. E. A. W. OLDHAM,
Secy. to the Govt. of Bengal.

No. 3716B., dated Calcutta, the 16th July 1908.

From—PANDIT RAMA BALLABHA MISRA, M.A., Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in charge:
THE HON'BLE MR W. C. MACPHERSON, C.S.I.

I AM directed to submit the accompanying report, received from the Commissioner of Salt, Bengal, on the administration of the Salt Department in the year 1907-08. The report does not cover the preventive work in Bihar, which is controlled by the Commissioner of Northern India Salt Revenue, but includes within its scope the preventive work in the districts of Chittagong and Noakhali, which continues to be under the control of the Commissioner of Salt, Bengal.

2. *Amendment of the Salt Law.*—Reports were received from local officers during the year on the proposals made in the Government of India's letter No. 3462Exc., dated 3rd June 1907, for amendment of the Indian Salt Act, of 1882, which include the repeal of the Bengal Act of 1864, and the Board submitted to Government their report on these proposals in their letter No. 53B.—T., dated 25th April 1908.

* * * * * * *

9. *Imports.*—There was a continued increase both in the quantity of salt imported into Bengal by sea during the year, and also in the imports of Madras salt by land into Orissa. The transactions in salt at the Sulkea and Kidderpore Dock *golas* were the highest on record.

10. *Consumption.*—According to the method of calculation by which the consumption of salt in the province is worked out, as described in paragraph 7 of the Board's letter to Government, No. 4451B., dated the 30th July 1907, the quantity of salt which passed into consumption in the province during the year under review amounted to 82,81,916 maunds as against 78,94,200 maunds in the previous year.

* * * * * * *

11. The reduction of duty on salt from Re. 1-8 to Re. 1 a maund, with effect from the 20th March 1907, sanctioned by the Government of India's Notification No. 1748Exc., dated the 20th March 1907, has resulted in a decrease of 6 annas and 10 pies in the provincial average of the wholesale prices per maund at district head-quarters in the year under report as compared with the previous year. This decrease of price is similar to the decrease of 6 annas 6 pies per maund, which occurred in the first year (1905-06) following the reduction in the rate of duty from Rs. 2 to Re. 1-8, and it may be hoped that there will be a further decrease of price in the current year, as in

1906-07, such as will secure to the wholesale purchaser, and to the public the full benefit of the reduction in duty from Re. 1-8 to Re. 1. Retail prices in the province also show an average decline from one anna and one pie a seer in 1906-07 to 11 pies a seer in 1907-08.

12. There was a large decrease in the number of seizures of illicit salt and in the number of prosecutions under the Salt Laws during the year, as compared with the previous year. In the district of the 24-Parganas, the number of cases under section 9 of Act XII of 1882 fell from 139 to 38. This satisfactory decrease in the number of offences is attributed by the Commissioner to "the cheapening of licit salt, the adequate supply of salt in every market, the opening of new shops in various localities, and the constant patrol over the saline areas."

13, *Receipts and charges.*—The financial results of the year, as compared with those in 1906-07, show a decrease of nearly 53 lakhs, or 32·9 per cent. in the receipts, and of Rs. 99,023 or 20·3 per cent. in the charges. The decrease in receipts is accounted for chiefly by the reduction of duty; but there was also a small falling off in the amount of salt cleared during the year.

* * * * * * *

No. 3358., dated Calcutta, the 1st July 1908.

From—B. Foley, Esq., I.C.S., Offg. Commissioner of Excise and Salt, Bengal,
To—The Secretary to the Board of Revenue, L.P.

I have the honour to submit the following consolidated Report on the administration of the Salt Department in Bengal for 1907-08. Preventive operations continued during the year under the India Salt Act, XII of 1882, to be controlled by the Commissioner of Excise and Salt and operations under Act VII (B.C.) of 1864 by the Board of Revenue.

Charge of Department.

2. Mr. E. Geake was in charge of the Department from the 1st April 1907 to the 27th February 1908. I held charge until the close of the year.

GENERAL.

Control of the Salt Department.

3. * * Noakhali and Chittagong remained under the control of the Bengal Salt Commissioner throughout the year and at the request of the Board of Revenue, Eastern-Bengal and Assam, this arrangement will continue for another year, pending the amalgamation of the Salt and Excise establishments in that Province.

* * * * * * *

Salt Law

5. The India Salt Act, XII of 1882, continued to be the Salt Law in force in Orissa. In the districts of Midnapore, Howrah, the 24-Parganas, Khulna, Backerganj, Noakhali and Chittagong that Act and Act VII (B.C.) of 1864 remained concurrently in force.

* * * * * * *

Rate of duty.

8. The duty on salt remained at Re. 1 per maund throughout the year.

* * * * * * *

Reduction of the concession fee in connection with the issue of duty-free salt for industrial purposes.

10. On the recommendation of the Commissioner, Northern India Salt Revenue, made in consequence of the reduction in the rate of duty on salt the Government of India in their orders No. 6026Exc., dated the 4th October 1907, reduced the fee that was payable under the terms of their orders No. 3663S.R., dated the 15th July 1901, from Rs. 300 to

Rs. 100 per annum in the case of concessions regarding the issue of duty-free salt for industrial purposes.

Rebate of duty on salt used for fish-curing.

11. On the application of a Company which is being formed to develop the sea-fishing industry in the Bay of Bengal on the lines indicated in Mr. K. G. Gupta's Report on the Fisheries of Bengal, the Government of India in their orders No. 1257-1, dated the 5th February 1908, sanctioned a rebate of duty on salt used for fish-curing, subject to the conditions that the concessionaires should pay for the cost of any preventive establishment that might be found necessary and that the rebate to be allowed should not exceed the duty payable on the salt used in fish-curing. Effect will be given to these orders after ascertaining the requirements of the Company, and general rules on the lines of the Madras and Bombay rules will be framed subsequently for the issue of duty-free salt for fish-curing to the coast fishermen of Bengal.

Reduction of duty on *Sitta* or impure salt.

12. The rate of duty on *Sitta* or impure salt obtained in the process of manufacture or refinement of saltpetre was reduced from Re. 1 to 8 annas a maund with effect from the 1st September 1907, in India Government orders No. 5273Exc., dated the 22nd August 1907, to the Commissioner, Northern India Salt Revenue, who recommended the reduction. The reduction was made in consequence of the lowering of the rate of duty on salt to one rupee and the possibility of *Sitta* being advantageously used for industrial and agricultural purposes.

* * * * * * *

Legislation for introduction of credit system of payment of duty.

15. A Bill to provide for the introduction of the credit system for payment of duty on salt, as obtains in Madras and Bombay, was introduced in the Council of the Governor-General of India on the 8th June last.

Chinese Salt Mission.

16. During the year a Chinese Mission, consisting of two Secretaries of the Chinese Board of Finance (Messrs. T'ang Jui-T'ung and Fan Shao-Sen) with a Secretary (Mr. Wang Tsai-chi) and an Interpreter (Mr. Yi-Shan), was sent to Calcutta to study the salt system prevailing in Bengal. The Mission arrived in October 1907, and after obtaining the information they desired, left Calcutta in November.

CHAPTER II.—STOCKS, IMPORTS AND CLEARANCES.

Stocks and issues.

17. * * * The stock of salt in all the golas, both public and private, at the beginning of the year was over 7 lakhs of maunds less than on the 1st April 1906. The imports showed an increase of over 16 lakhs of maunds. The clearances were less than in the previous year by more than a quarter of a lakh of maunds. In addition to the closing balance, there were at the close of the year 3,63,100 maunds of salt lying afloat in the port of Calcutta against 3,54,668 maunds at the end of 1906-07.

The percentage of the total importations of salt bonded in the Sulkea and Kidderpore golas during the year was 76 against 74 in the previous year. There was a large increase in importation during the year and the quantity bonded was in excess of that bonded in any of the past five years.

Imports.

18. * * The importations into Calcutta during the year show an increase of 14·1 per cent., the largest quantity coming from the United Kingdom, the next from Salif, Spain, Aden, and Hamburg and Bremen in the order named. There was, however, a decrease in the quantity imported from the United Kingdom by more than 10 lakhs of maunds. Muscat and the Persian Gulf have fallen out of the list. A severe outbreak of small-pox put a stop to importation from Salif in 1906-07, but more salt than ever before was received from this port during the year under review.

Sales of imported salt from shipboard and bond.

19. * * In Calcutta the sales from the importing vessels direct and from bond both fell by 1·1 and 1·8 per cent., respectively; 19 per cent. was sold from shipboard and 81 per cent. from bond, the same figures, curiously enough, as in the previous year. Of the vessels carrying salt into Calcutta during the year, 98 per cent. were steamers.

Transactions in the Sulkea and Kidderpore Dock golas.

20. The total salt transactions at the Sulkea and Kidderpore golas for the last five years are shown below:—

Years.	Maunds.
1903-04	1,50,05,754
1904-05	1,62,70,908
1905-06	1,67,67,724
1906-07	1,77,57,526
1907-08	1,92,86,421

The turnover was the highest on record, but no difficulty was experienced in providing bonding accommodation.

The quantity of salt handled at Sulkea was 1,29,25,489 maunds against 1,11,59,238 in the preceding year and at Kidderpore 63,60,932 against 65,98,288 maunds.

The Kidderpore Salt golas received 30 per cent. of the total quantity bonded against 38 per cent. in the previous year.

The improvements made at Sulkea during the previous year have quite justified the expenditure incurred. The two new pontoons, however, which were constructed, have not proved as successful as was expected. Alterations are being made which will, it is hoped, render them suitable.

* * * * * * *

Inland bonded warehouses.

22. There were only two bonded warehouses in the province as in the previous year, both being situated at Chandbali in the district of Balasore and owned by Messrs. Turner, Morrison & Co. The quantity of salt despatched to these two warehouses as well as to the bonded warehouses transferred to the new province was 14,31,464 maunds (11,44,646 from shipboard and 2,86,818 from golas in Calcutta) against 13,22,300 maunds (9,43,164 maunds from shipboard and 3,79,136 maunds from golas in Calcutta) in the previous year. The quantity of salt despatched to the warehouses at Chandbali alone from shipboard amounted to 1,20,240 against 72,568 maunds (66,484 from shipboard and 6,084 from the golas in Calcutta) in the previous year, showing an increase of 66 per cent.

* * * * * * *

Imports of Madras salt into Orissa by land.

25. The quantity of Madras *karkatch* and refined salt imported into Orissa during the year was 11,94,529 maunds, against 9,47,102 in the previous year, showing an increase of 2,47,427 maunds, or of 26·1 per cent. Owing to the reduction of duty to Re. 1 per maund, the retail price decreased and there was larger consumption among the poorer classes.

* * * * * * *

Imports of Bombay salt.

26. The figures given below show the consumption of Bombay salt in the Tributary States during the last four years. The salt is imported by the Bengal-Nagpur Railway:—

	1904-05.	1905-06.	1906-07.	1907-08.
	Mds.	Mds.	Mds.	Mds.
Jharsaguda ...	...	7,404	26,336	13,599
Sambalpur ...	5,141	32,354	43,370	31,228
Total ...	5,141	39,758	69,706	44,827

There was a decrease of 24,879 maunds in the consumption of Bombay salt as compared with the previous year, but this decrease was more than compensated by the increase of 42,217 maunds in the consumption of Madras salt in those States.

CONSUMPTION AND PRICES.

Consumption in Bengal.

27. The total quantity of salt which passed into consumption in the Province during the year under report was 82,81,916 maunds. This is exclusive of 26,05,201 maunds, the net export by land, but inclusive of 18,104 maunds educed from saltpetre.

Price of Salt.

30. * * * The further reduction in the rate of duty from Re. 1-8 to Re. 1 a maund with effect from the 20th March 1907 brought about a fall in the wholesale prices to the extent of 6 annas 10 pies a maund as compared with the previous year. The retail prices in the saliferous districts, for which alone information is available, also show a decline, the price per seer ranging from 9 pies to 1 anna 3 pies against 1 anna to 1 anna 6 pies in the preceding year. The reduction of duty came into operation twelve days before the close of the preceding year.

Exclusive of duty, the average wholesale price of Liverpool salt per hundred maunds as sold from the ship's side in the port of Calcutta was Rs. 54-7-4 against Rs. 48-10-2 in 1906-07.

PREVENTIVE MEASURES.

Attachments, releases and confiscations in the saliferous districts, including Orissa.

31. Illicit salt was attached in 99 and confiscated in 93 cases against 387 and 414 cases, respectively, in the previous year. The quantities attached and confiscated were, respectively, 7 and 4 maunds, against 18 and 55 during the year 1906-1907. There was thus a decrease of 11 maunds, or 61·1 per cent. in the quantity attached. No salt was released during the year.

Number of seizures and unsuccessful house-searches.

32. The total number of seizures of salt or salt earth was 137 against 387 in the previous year. There were no unsuccessful house-searches during the year.

Prosecutions.

33. * * In the 24-Parganas the total number of prosecutions fell to 38 from 139. The fall is ascribed to the cheapening of licit salt, the adequate supply of salt in every market, the opening of new shops in various localities and the constant patrol over the saline areas. In Howrah there have been no cases during the last three years. In Chittagong there was one case in 1906-1907, but none during the year under report, nor were there any in Noakhali, against two (one false) in the previous year, nor again in Midnapore, or in Puri, against 5 and 20, respectively. In Khulna there have been no prosecutions for the last two years. In Cuttack there were 11 cases in 1907-1908 against 5 in the previous year, while in Balasore there were 9 against 2 in 1906-1907. The increase is to be attributed to the distress prevailing among the residents of the saline tracts.

* * * * * * *

FINANCIAL RESULTS.

Receipts and charges.

36. * * * * The results of the year, as compared with 1906-07, show a decrease of Rs. 52,99,729 or 32·9 per cent. in receipts and of Rs. 99,023 or 20·3 per cent. in expenditure, the net revenue being Rs. 1,04,00,522, which is less than that of the previous year by Rs. 52,00,706 or 33·3 per cent. The charges do not include a proportionate share of the cost of the Customs Preventive Service, which is largely employed in safeguarding the salt revenue. The decrease in receipts, Rs. 53,19,724, occurs under the head "Import duty on salt" and is due chiefly to the reduction in the rate of duty from Re. 1-8 to Re. 1 a maund, though partly also to a diminution in the clearances of salt during the year. The miscellaneous receipts, on the other hand, show an increase of Rs. 19,777.

* * * * * * *

Charges.

37. According to the figures furnished by the Accountant-General, Bengal, the charges during the year were Rs. 3,88,359 against Rs. 4,87,382* in 1906-07, showing a decrease of Rs. 99,023 or 20·3 per cent.

* * * * * * *

MISCELLANEOUS.

* * * * * * *

Trade in saltpetre in Bengal.

39. The quantity of salt educed in the manufacture of saltpetre during the year and removed on payment of duty from all the refineries in the Province was 18,104 maunds against 19,576 in the previous year, showing a decrease of 1,472 maunds. The decrease was due to the ordinary fluctuations of trade.

Saltpetre refineries in Calcutta and its environs.

40. As in the previous year, there were two licensed saltpetre refineries at Soorah and Kakurgachi, but very little business was done in the latter.

Work done in the Calcutta refineries.

41. The quantity of refined saltpetre produced in the two refineries was 6,237 maunds against 11,283 maunds in the year before. The quantity of salt educed fell to 753 from 1,569 maunds and the quantity of *sitta* or impure salt left in the course of refinement was 784 maunds against 1,497 in the previous year. The decrease is due to a general decline in the trade. Five hundred and fifteen maunds of educed salt and 20 maunds of *sitta* were sold during the year. The license fees realised from the two refineries amounted to Rs. 100 and the duty recovered was Rs. 520.

* * * * * * *

* Revised figures.

BRUSSELS UNIVERSAL AND INTERNATIONAL EXHIBITION, 1910.

NOTIFICATION.

No. 8548.—The 31st July 1908.—The following resolution of the Government of India, Department of Commerce and Industry, is republished for general information, in continuation of this Government Notification No. 307, dated the 13th January 1908:—

H. O. STREATFEILD,
Offg. Secy. to the Govt. of Bengal.

No. 6453—6473—6, dated Simla, the 10th July 1908.

RESOLUTION—By the Govt. of India, Department of Commerce and Industry.

The following papers relative to the Universal and International Exhibition to be held at Brussels in the year 1910 are published for general information, in continuation of Resolution No. 22-42-1, dated the 6th January 1908:—

BRUSSELS UNIVERSAL AND INTERNATIONAL EXHIBITION, 1910.

UNDER THE HIGH PATRONAGE OF HIS MAJESTY THE KING OF THE BELGIANS AND THE HONORARY PRESIDENCY OF H. R. H. PRINCE ALBERT OF BELGIUM WITH THE SUPPORT OF THE PUBLIC AUTHORITIES.

Appeal to Producers.

Brussels, January 24, 1908.

A Universal and International Exhibition will open at Brussels in the month of April 1910, and will last for about six months. Its Palaces and Halls will be erected in the new quarter of the Avenue Louise skirted by the grand old beech trees of the Bois de la Camber, the favourite resort of the Brussels people. What a delightful view indeed will the observer command from this picturesque site: he will witness in the distance the undulating country overlooked in the rear by the thick-set trees and green shrubbery of the Forest of Soignes.

From its position at the junction of the main lines of communication of Europe, and its being the Capital of one of the most densely populated and most industrial countries of the Globe, and having, for centuries past, been accumulating art treasures of all kinds, Brussels is so well known that any enlargement upon its reputation will be quite unnecessary.

Not only is the Belgian Capital the seat of a strong artistic, scientific, and commercial movements, but every possible effort is made towards improving the City and rendering it more and more attractive, while the people are always ready to welcome and extend hospitality to foreigners coming to visit Brussels.

No sooner had the scheme been announced than it secured the enlightened protection of the King and the support of Government; and the Brussels Exhibition is bound to be a great success.

The Belgian Government have acquainted the Foreign Cabinets with the organisation of this Exhibition, inviting them to take part and to be officially represented by appointing Commissioners or Committees.

Even now, important corporations are in course of formation, from all over Belgium considerable support is forthcoming and adhesions have practically been received from the large neighbouring Countries.

The Brussels Universal and International Exhibition includes, in broad lines, artistic, scientific, Industrial, commercial and colonial sections. It will be open to works of art, industrial and agricultural products, and generally to all wares coming within the classification annexed to the General Regulations.

The Artistic section will consist of an International Saloon of Fine Arts.

The Scientific section will embrace with the various degrees of education, the instruments and general methods connected with Letters, Sciences and Arts.

The Industrial section will be made up of all the products, methods and materials, both industrial and agricultural.

Steps will be taken to render fully complete the special groups connected with fancy trades, mines, metallurgy, machinery, electricity, arms manufacturing and mechanical locomotion.

The programme further contains special Exhibitions, temporary Agricultural and Horticultural Shows; Congresses, Conferences, Artistic and Sportive Fêtes.

The Executive Committee also propose to organise during the Exhibition popular games and competitions.

Furthermore, like at other Exhibitions, national compartments will be formed wherein the works and productions of a same country will be divided into groups and classes according to a system of general classification.

The Exhibition will cover a total area of about two hundred acres, a large portion of which will be reserved to the Foreign Sections. The installations will be connected with the Belgian State Railway, so as to bring all exhibits up to the required spot on rail tracks laid down in the Halls and ground.

The principal Palace and the Halls of the Exhibition will be built of iron and covered with hard materials: the roofed surface amounting to at least one hundred and fifty thousand square metres.

The Machinery Gallery will include numerous workshops in operation under the eyes of the Public.

A vast park, in which attractions will scatter in all directions, will surround the buildings.

Enclosed herewith will be found the full programme of the Exhibition comprising the General Regulations, and the detailed classification of the goods.

The attention of Exhibitors is specially directed to the fact that the rent for detached space includes handling charges (Article 25 of General Regulations). Exhibitors will thus be enabled to accurately estimate beforehand the charges incumbent upon them.

According to the clauses inserted in Articles 18 and 27 of the General Regulations, *special arrangements may be concluded for the hire of large spaces as well as for the handling work and storage of empties, but solely with such Countries as are officially represented.*

In that case, the charges would be fixed separately, viz.:

(1) For hire of space in the Halls, exclusive of expense of decoration;
(2) For handling;
(3) For storage of empties.

Any such agreements to be entered into with officially represented Countries will be drawn up by the Commissioner-General of the Belgian Government.

The Government will grant on the State Railways free transport to and fro, of Belgian products consigned to the Exhibition and free return in the case of foreign exhibits.

The exhibition will be treated as an actual bonded warehouse, foreign goods intended for the exhibition being allowed provisional duty-free importation subject to being afterwards re-exported.

The necessary measures will be taken by the Government for protecting in Belgium patentable inventions, industrial designs or models, and manufacturing or trade marks appearing at the Exhibition.

Moreover, the Belgian Government have sanctioned the organisation of a Lottery comprising several series of a million tickets each. The prizes will be purchased from the Exhibitors, or (as regards series of tickets issued prior to the opening) from such persons as shall have given a written undertaking to exhibit.

An International Jury of Awards will be instituted, to operate under the control of the Commissioner-General of the Belgian Government. The Members of the Jury will be designated by the Government of their respective countries.

The General Regulations specify the nature of the awards to be attributed to the Exhibitors; same consist of diplomas or medals.

In conclusion, the Executive Committee propose to give all kinds of fêtes, to multiply the attractions with the view of enhancing the splendour of the Exhibition and increasing the number of visitors.

The Board of Directors of the "Société Anonyme de l'Exposition de Bruxelles" is placed under the Presidency of Baron Baeyens, Governor of the Bank "Société Générale de Belgique." An Executive Committee with Mr. Emile De Mot, Senator, Burgomaster of the City of Brussels, as President, has been invested with all the powers of the Board.

The Executive Committee will determine the various measures coming within the scope of organisation and management, and are exclusively qualified to deal with all questions of receipts and expenditure.

Although an undertaking solely due to private initiative, the Brussels Exhibition has ensured the effective co-operation of the Belgian Government, and also the support of the City of Brussels and Province of Brabant. It is placed under the High Patronage of H. M. the King of the Belgians and under the Honorary Presidency of H. R. H. Prince Albert of Belgium.

The Duke d'Ursel has been invested with the functions of Government Commissioner-General to the Brussels Exhibition, and M. J. Gody has been appointed Deputy Commissioner-General.

The Exhibition is not organised with the view of profit; its promoters are anxious to make our country appreciated abroad, by displaying anew her productive power and industrial progress.

The Executive Committee therefore warmly appeal to all, convinced, as they are, that the character and object of the Exhibition will secure numerous and important adhesions.

THE EXECUTIVE COMMITTEE.

President:

Emile DE MOT
Senator,
Burgomaster of the City of Brussels.

Vice-Presidents:

Georges DUPRET,
Senator.

Maurice LEMONNIER,
Member of the Chamber of Representatives,
Alderman of the City of Brussels.

Members :

Emile DE LAUNOY,

Senator,

President of the Brussels Chamber of Commerce.

Victor DE LOGHT,

Advocate, City Councillor.

Gustave FRANCOTTE,

Late Minister,

Member of the Chamber of Representatives

Leon JANSSEN,

General Manager of the Brussels Tramways Company.

Omer LEPREUX,

Director of the National Bank of Belgium.

Edmond NERINCX,

Vice-President of the Chamber of Representatives.

Fernand VANDERSTRAETEN-SOLVAY,

Manufacturer.

Secretary :

Francis WIENER,

Advocate to the Court of Appeal.

Assistant Secretary :

Raoul VAN DEN BUIGKE,

General Managers :

Eug. KEYM,

Alderman at Watermael-Boitsfort.

Count Adrien van der BURGH,

Commissioner-General of the Belgian Government at the Milan Exhibition, 1906.

Approved :

J. GODY,

Deputy Commissioner-General of the Government.

Duke d'URSEL.

Commissioner-General of the Government.

General Dispositions and Organic Rules.

CHAPTER I.

General provisions.

Object.

Art. 1.—The Exhibition will include chiefly art works (Painting, Sculpture, Engraving and Architecture), scientific works and the Industrial and Agricultural plant and productions of all nations.

It will further include military art and Colonial Exhibitions. The Executive Committee contemplate the creation of an exhibition of modern Decorative Art.

Machinery of every description will, as far as practicable, operate under the eyes of the public for the purpose of showing visitors the mode of working same and initiating them into the different lines of manufacture.

Special temporary shows and exhibits of agricultural machines in operation, live stock, plants, flowers, fruits, vegetables, etc, are contemplated and those will be regulated by independent rules.

Location and Surface.

Art. 2.—The Exhibition will be installed in the new quarter of the Avenue Louise adjoining the Bois de la Cambre.

The Exhibition will cover more than 200 acres of ground and will be connected with the Belgian State Railway.

The Principal Palace as well as the Exhibition Halls will be built of iron and covered with hard materials, the surface occupied by the various buildings approximately reaching 150,000 square metres, made up of Halls for Industrial and Commercial products, Machinery Gallery, Railway Material and Electricity Departments, with annexes, etc.

A vast park surrounding the buildings will contain numerous attractions.

The Executive Committee have received numerous offers for the instalment of important attractions, such as the reconstituting a quarter of Old Brussels, together with its monuments, decorated and furnished houses whose occupiers will be clad in the costumes of the times, the establishment of a universal museum of fetichism, etc., etc.

Duration.

ART. 3.—The Exhibition will be inaugurated end of April 1910, and remain open for a period of at least six months, with the option for the Executive Committee to prolong it until the 15th November inclusive.

Board of Directors and Executive Committee.

ART. 4.—The Board of Directors (*) of the "Société Anonyme de l'Exposition de Bruxelles" under the Presidency of Baron Baeyens, Governor of the "Société Générale" Bank, have delegated their powers to an Executive Committee with Mr. Emile De Mot, Senator, Burgomaster of the City of Brussels, as President. This latter Committee will act as representative of the Company and deal with the various matters of Administration and Finance; it forms the executive and ruling authority in respect to the organisation and conduct of the Exhibition.

The Executive Committee have appointed two General Managers for the purpose of carrying out their resolutions.

Superior Commission of Patronage of Belgian Section.

ART. 5.—A Superior Commission of Patronage will be instituted and the duties of the Commission consist in promoting and facilitating the participation of Belgian producers.

It will be composed of Committees of groups and classes and also local Committees, such Commission and Committees to be governed by special regulations determining the duties assigned to them and mode of discharging same.

Government Commissioner-General's Department.

ART. 6.—The Department of the Commissioner-General of the Government is conducted by the Duke d'Ursel, Commissioner-General, with the co-operation of M. J. Gody Deputy Commissioner-General, General Manager of the Belgian Section, assisted by special Commissioners.

The Commissioner-General of the Government is the Government Representative with the Executive Committee of the Exhibition Company and with the Representatives or Delegates of Foreign Countries taking part in the Exhibition.

He acts as the Official Medium both between said representatives or delegates of Foreign countries and the Exhibition Company, and between the former and the Belgian Government in connection in all matters requiring consideration on behalf of their Exhibitors.

All enquiries generally are to be addressed to the Commissioner-General.

Concurrently with the Executive Committee of the Exhibition Company, the Government Commissioner-General will settle the whole plan of the Halls and laying out of the grounds, the general scheme for allotment of space in the Belgian and Foreign Sections and also the programme of right of way and party walls in these sections.

He will act between foreign Commissioners and the Executive Committee of the Exhibition Company in regard to the preparation of agreements for hire of space, cartage and handling of exhibits, storage of empties, etc., etc., but no personal responsibility will attach on that account.

He is to approve and adopt regulations, more particularly those connected with the cartage and handling service, the entries, maintenance of order, setting up and operation of machinery and mechanical or electrical appliances and installations.

The Government Commissioner-General, jointly with Mr. Gody, General Manager of the Belgian Section, will organise and control the participation of Belgian producers

Special regulations will determine the functions and duties to be exercised by the Government Commissioner-General's Department and fix its relations with the Commission of the Belgian Section.

Belgian and Foreign Commissioners and Delegates.

ART. 7.—The Belgian Ministries and Public Administrations will accredit Delegates for the purpose of organising their special exhibitions, such Delegates to be placed under the authority of the Government Commissioner-General.

Foreign Governments have been advised of the organisation of the Brussels Universal and International Exhibition, in which they will be invited to take part and to be officially represented by accredited Commissioners; these Commissioners, representing their respective nationalities and having the charge of their interests, will arrange with the Executive Committee

(*) The Board of Directors is composed of Messrs. Baron Ferdinand Baeyens, president; Emile De Launoy, Emil De Mot, Gustave Francotte, Victor Fris, Baron Leon Lambert, Edmond Nerinex, vice-presidents; Jacques Cassel, Eugene Cavenaille, Victor De Locht, Georges Dupret, Baron Edouard Empain, Léon Janssen, Maurice Lemonnier, Omer Lepreux e Fernand van der Straeten-Solvay, Francois Vaxelaire-Claes, members; Françis Wiener, secretary, and Raoul Van den Bulcke, assistant secretary.

of the Exhibition Company through the Government Commissioner-General all questions relating to the distribution of space reserved to their respective country and installation of each national section. Collective Exhibitors belonging to Countries which are not officially represented can be admitted with the joint consent of the Executive Committee and Government Commissioner-General and may designate Commissioners subject to like approval. Exhibitors are not allowed to correspond with the Executive Committee except through the Representative or Delegate of their Country, but an Exhibitor whose country should not be represented by a Commissioner may correspond direct with the Executive Committee. This latter Committee will furnish all necessary information and circulate the Regulations required to be complied with by the Representatives or Delegates of the different nations and their Exhibitors.

Exchange of Space.

Art. 8.—No interchange of allotted space can take place between one country and another, unless with the sanction of the Executive Committee obtained through the Commissioner-General of the Belgian Government.

Classification of Goods.

Art. 9.—All products shall be divided into groups and classes as per list of general classification hereunto annexed. This document gives a summary enumeration of the products of each class; but is not restrictive. In case of doubt as to the classification of any article, the matter will be decided jointly between the Executive Committee and the Government Commissioner-General. Any small alterations which it may subsequently be necessary to make in the division of exhibits between the different classes shall be sanctioned by the Commissioner-General of the Government. This classification will form the basis of the arrangement of the products in each department allotted to the Exhibitors of a same nation, and on the International departments covering the Machine and Railway plant galleries.

General and Special Catalogues.

Art. 10.—The Executive Committee will compile an official and complete catalogue, methodically arranged, and containing the name and address of each Exhibitor with particulars as to trade and place of production (whether a factory, farm, etc.) the necessary information for which will be supplied by the Exhibitors under their sole responsibility, and according to the special form* which will be found herewith.

* Not printed.

Commissioners of represented Foreign Countries will be at liberty to issue, at their own expense, a special catalogue of their exhibits and to sell the same within their respective limits.

Protection of Inventions.

Art. 11.—The necessary measures will be taken by the Government for protecting in Belgium patentable inventions, industrial designs and models, as well as manufacturing or trade marks appearing at the Exhibition. It will be strictly forbidden to take copies, drawings, measurements, photos, cards or models of any objects exhibited unless with the Exhibitor's consent: the closest watch will be kept to enforce this rule. Nevertheless neither the Board of Directors nor the Executive Committee will incur any responsibility on account of infractions of this provision, dereliction of duty on the part of the guardians or violation of their orders.

The Executive Committee reserve to themselves the right of allowing general views to be taken and sold without the Exhibitor's consent being required.

Posters, Hand-bills, Show-cases, Signboards.

Art. 12.—All advertisements and notices, official or other printed matter intended to be posted or distributed within the Exhibition must first be submitted to the approval of the Executive Committee who will be entitled to withdraw their authority at any time.

Exhibitors will be required to submit to the Executive Committee for approval, plans of any show-cases, furniture or other fixtures intended to be used by them, and as regards machinery, apparatus, and plant connected with industry, noted plans showing height of proposed installation, including foundation and underground work, with statement of the total weight of the installation.

The Executive Committee, concurrently with the Commissioner-General of the Government, will regulate all matters affecting dimensions and placing of signboards.

Compliance with the Laws and Regulations.

Art. 13.—Exhibits of every description are to comply with the various requirements of the Laws and Regulations in force for the time being in Belgium. Exhibitors will be required to fulfil all the formalities prescribed by said Laws and Regulations, unless waived at the time by the competent Authorities.

The Belgian Government will grant administrative facilities for operating steam engines necessary for the purposes of the Exhibition.

Space Rent.

ART. 14.—All matters respecting the rent to be paid by Exhibitors for the space allotted to them will be found in Chapter II hereof.

Floorings and Partitions.

ART. 15.—The flooring of the Halls is calculated to bear per square metre a weight of 500 kilogs and in some parts to be mutually agreed upon up to 1,500 kilogs. Whenever alteration to the floors may be wanted for heavy or special exhibits, the consent of the Executive Committee will be required, and the work performed at Exhibitor's expense.

In their application for space, Exhibitors shall state the weight of their installation to the square metre.

Any partitions required over and above those leased by the Executive Committee shall, after being approved by the latter, be provided at Exhibitor's expense.

Decoration of Halls.

ART. 16.—The decoration will have to be borne by the Exhibitors, individually or collectively, subject to being first approved by the Executive Committee and the Commissioner-General of the Government.

Carriage of Exhibits.

ART. 17.—The Exhibition Company has secured from the Belgiam Government:

(*a*) Free carriage to and fro, on the State Railway lines, of Belgian products consigned to the Exhibition.

This exemption from freight extends to raw materials for manufacturing purposes or for producing motive power at the Exhibition, and likewise to empties and packages having contained the goods and required for their return.

(*b*) The application of freight rates as per Tariff No. 10, in the case of foreign goods travelling on the State Railway lines. (This tariff provides for the free carriage on return from, and for the payment of the full rates on consignment to the Exhibition.)

Negociations will be opened with the view of obtaining reductions on Belgian Companies' lines, on Foreign lines and on the regular lines of steamers.

(*c*) The opening of a Post-Telegraph and Telephone Office within the Exhibition.

Handling of Goods.

ART. 18.—The Exhibition Company undertake, on behalf of persons exhibiting in detached spaces, the handling of goods within the Exhibition, free of charge, in respect of all packages of usual sizes and not exceeding 1,500 kilogs in weight, provided same are delivered on or before the 10th April, 1910. This includes:

(*a*) Taking delivery of the packages within the Exhibition premises;
(*b*) Unloading on the spot allotted;
(*c*) Removing empties and packages from, and bringing back to the spot allotted;
(*d*) Removing the goods when repacked.

Exhibitors shall comply with the instructions given to them by the Executive Committee with the view of facilitating the removal of empties.

The Executive Committee will cause to be stored and, at the close of the Exhibition, brought back for repacking empties belonging to foreign Exhibitors, but will not be responsible for the condition thereof when so returned.

Rent for storing empties will be charged at the rate of frs. 2·50 per square metre of surface measured according to the greatest dimensions above the floor, with a minimum charge of frs. 2·50 for any empty not reaching a square metre.

Foreign Exhibitors wishing to take charge of their own empties will have to remove them immediately after unpacking, and comply with the instructions of the Executive Committee.

Special terms must be arranged with the Executive Committee for the handling of packages exceeding 1,500 kilogs, also for any single package exceeding that weight such as blocks of stone or marble, iron wares, parts of machinery, cannons, fitted engines and threshers, etc. Also when the dimensions exceed the surface of ordinary Railway trucks such as timber, iron bars, beams, rolling stock (locomotives, railway and tramway carriages, cars, etc.), and craft. Further, in the case of any bulky packages of articles of a breakable nature, in certain instances Exhibitors may be required to join in, or to solely take charge of the handling of the goods.

The Executive Committee reserve to themselves the right to make arrangements, if possible, so that any travelling cranes intended for exhibition in the machinery gallery be set in working order sufficiently beforehand to be used for shifting and erecting work incumbent upon the Exhibitors, subject to payment of a fee.

With all Countries officially represented, the Executive Committee are prepared to arrange special terms for the handling of goods and storage of empties.

No contractor letting out show-cases, mirrors, furniture, posters and sign-boards, or no out-door salesmen will be entitled to the warehousing or return of empties, the Executive Committee not undertaking to interfere therein in any way.

The unpacking, laying out and repacking of goods and the repairing of empties, will be at Exhibitor's own cost. The repacking will be proceeded with according to the Executive Committee's instructions and must be completed before 31st December 1910, and all fixtures removed before 15th January 1911, after which date all remaining goods will be removed and stored at Exhibitor's cost and risk.

All goods unremoved by the 1st February 1911 will be sold by public auction six months afterwards, and the Exhibition Company will be entitled to proceeds of the sale.

Each Exhibitor or his delegate is to attend the reception of his goods, on arrival, and control the identity of same. Failing the Exhibitors or their agents being on the Exhibition premises to receive their packages, it will be optional with the Executive Committee to return the goods or unpack them at the expense and risk of the owner.

All materials intended for fixtures must, before introduction, be submitted to the Executive Committee for approval.

The Exhibition Company undertake that all goods will be handled with the greatest care, but it is expressly stipulated that in no case can the Company be held responsible for any loss, shortage, damage, etc., to packages or their contents.

Installation, Maintenance and Removal of Exhibits.

ART. 19.—The Foreign Public Administrations and Commissions will carry out their own installations in the special pavilions erected by them in the grounds or parts of Halls specially allotted tnem, subject to submitting their general plans to the approval of the Executive Committee who will agree to same jointly with the Government Commissioner-General.

ART. 20.—Exhibitors, whether singly or collectively, will have to bear the entire expense of their installations, such as special decorations, superstructure and consolidation of floors, partition framework and coating, ceilings, drapery, enclosures, supply of furniture, arrangement, ornamentation, laying out, preservation and cleaning of goods, foundations, fixing up, motive power, steam, water, gas, electricity, taking down, storage of empties, insurance, plantings and special levellings; reinstating the premises; customs or excise duties; license dues on excisable commodities, etc., etc., all measures in this connection to be approved by the Executive Committee and the Commissioner-General of the Government. Exhibitors will be held responsible for any damages caused by their installations to floorings, partitions, etc., in their use, and for such dilapidations as might be considered due to misuse

No Exhibitor shall be allowed to set up his installation in such a way as to deprive another Exhibitor from light, or to cause him any inconvenience or prejudice whatsoever

Save under a special authority, Exhibitors, whether singly or collectively, will not be allowed to cover up their exhibits during the hours fixed for public admission to the Halls and Pavilions.

No exhibits may be removed before the close of the Exhibition, except with the Executive Committee's special consent in writing.

Exhibitors are not allowed to remove their exhibits, products or fixtures, until after paying the charges for space, selling dues, damages (if any), etc.

CHAPTER II.

SPECIAL PROVISIONS.

Articles excluded.

ART. 21.—The Exhibition is not available to explosive, detonating and fulminant materials, nor generally any dangerous or injurious articles including medicines—patent or not—secret remedies and empiric preparations of unknown ingredients.

Alcohol, spirits, oils, essences, corrosive liquids and all matters likely to endanger other exhibits or inconvenience the public will only be admitted if contained in suitable strong vessels of small size.

Percussion caps, gun-primers, fireworks, matches and other like articles will be admitted in imitation form only, *i.e.*, without any adjunction of inflammable matter.

Articles likely to prove a nuisance, or of an unwholesome nature will be subject to such precautionary measures as may be prescribed.

The Executive Committee will also have absolute right to order the removal of products the nature or appearance whereof might be dangerous, unsuitable or incompatible with the aim and conveniences of the Exhibition.

Applications for Admission.

ART. 22.—Applications for admission must be made on the accompanying forms,* supplied by the Executive Committee, and these after being duly filled up and signed in duplicate, are to be forwarded in a prepaid envelope, not later than the 15th January 1909 as to machinery, apparatus and plant connected with industry, and before the 1st May 1909 as to other goods:

* Not printed.

(a) To the Government Commissioner-General, as regards exhibits of Belgian origin;
(b) To the Commissioners of Countries officially represented at the Exhibition, as regards exhibits originating from those Countries;
(c) To the Executive Committee of the Exhibition, 34, Rue des XII Apôtres Brussels, as regards exhibits originating from Countries not officially represented.

Applicants referred to in (c) shall not send their goods until their application has been considered by the Executive Committee and a certificate of admission duly issued.

ART. 23.—The allotted space will be measured according to the greatest length and width above the floor or ground.

All surfaces are to be established to the great square.

No allotted space can be assigned, exchanged or sub-let except with the express consent of the Executive Committee.

Exhibitors whether singly or collectively shall provide at their own expense, subject to the approbation of the Executive Committee, the ceilings, drapings, stuffs, linen or jute material, partition framework and coating, superstructure of floorings, foundations or consolidation of floors for heavy installations, all schemes connected with such installations, to be approved by the Executive Committee and the Government Commissioner-General.

CHARGES FOR SPACE.

ART. 24.—The spaces in the Belgian Section or in officially represented Sections will be granted for such rent and on such terms and conditions as the Commissioner-General of each section shall determine.

ART. 25.—The chargefor space in the different compartments—except in *the official sections and the Sections recognised by the Executive Committee jointly with the approval of the Commissioner-General*—including the general decoration of the halls and handling of the goods, has been established according to position as follows:—

I.—HALLS OF INDUSTRY AND TRADE.

A.—SIDE GALLERIES.

1. Collective Space.

Ground space ...	(A) Depth not exceeding 1 metre, *Per lineal metre frontage*	...	fr.	60
	(B) Depth exceeding 1 metre, *Per square metre ground surface*	...	"	60
Wall space ...	(C) *Per lineal metre frontage*	...	"	60
The charge for collective space allotted will in no case be less than ...	... ...	...	"	60

2. Detached Space.

(A) Measured at the greatest dimension, the smallest being below 1 metre, *Per lineal metre frontage* ...	...	fr.	90
(B) Both dimensions exceeding 1 metre, *Per square metre ground surface* ...	...	"	90
The charge for detached space allotted will in no case be less than	...	"	90

B.—CENTRAL GALLERIES.

1. The charge will be ...	Collective space, *Per square metre*	...	fr.	90
	Detached space, *Per square metre*	...	"	130
2. Charge for rooms having at least 5 metres frontage and 5 metres depth.	Single frontage, *Per square metre*	...	"	70
	Corner frontage, *Per square metre*	...	"	90

II.—HALLS OF MACHINERY, ELECTRICITY, RAILWAY PLANT AND BOILER SHED.

FOR MACHINES AND VARIOUS INSTALLATIONS.

A.—Side Galleries.

1. Collective Space.

Ground space ...	(A) The depth not exceeding 1 metre, *Per lineal metre frontage* ...	fr.	60
	(B) The depth exceeding 1 metre, *Per square metre ground surface* ...	„	60
Wall space ...	(C) *Per lineal metre frontage* ...	„	60
The charge for collective space allotted will in no case be less than		„	60

2. Detached Space.

(A) Measured at the greatest dimension, the smallest being below 1 metre, *Per lineal metre frontage* ...	„	90
(B) Both dimensions exceeding 1 metre, *Per square metre ground surface*	„	90
The charge for detached space allotted will in no case be less than	„	90

B.—Central Galleries.

The charges have been fixed as follows.	Collective space, *Per square metre* ...	fr.	90
	Detached space, *Per square metre* ...	„	130

For any machine in operation, the duly proved expense of purchasing steam, water under pressure, gas, electricity and mechanical motive power will be refunded to the Exhibitor up to 50 per cent. of the amount paid for the space occupied by said machine, provided the expenses in question have been effected during the hours when the Halls are available to the public and the machine has been in operation at least four days per week and four hours per day.

III—GARDENS, SHEDS AND TENTS.

For space allotted to Exhibitors in the Gardens:

(A) The depth not exceeding 1 metre, *Per lineal metre frontage*	fr.	25
(B) The depth exceeding 1 metre, *Per square metre ground surface*	„	25
The charge for space in this division will in no case be less than	„	25

For space allotted under sheds or tents, if any, the above charges will be increased by 5 fr. per lineal metre, or square metre, as the case may be.

Payments.

Art. 26.—Rent for space will be collected by the Executive Committee of the Exhibition Company.

When exceeding 1,000 frs., same is payable in two equal instalments, the first on receipt of the admission certificate, the second on the 1st April 1910.

Rent under or equal to 1,000 frs. is payable at once on receipt of the admission certificate.

Any Exhibitor failing to pay the rent within the prescribed time will forfeit his rights and the admission certificate issued to him will be deemed cancelled.

Large Spaces.

Art. 27.—**Special terms may be arranged in respect of large spaces hired in the Halls or Gardens.**

In every Section, the space reserved for public Circulation must be kept free by the several countries, and no encroachment thereon will be tolerated.

In regard to spaces let out in blocks, the public circulation ways will be reckoned in the measurement of the surfaces leased, but one-half only of such ways will be counted in the case of frontage allotments.

Date of completion of Exhibits.

Art. 28.—Exhibits must be completed and all the work connected therewith terminated before the 15th April, 1910.

Machinery and appliances which can only be fixed or mounted by passing over the space of other Exhibitors shall be completely set up by the 15th October 1909, or even earlier, should the Executive Committee deem necessary.

All machinery foundation work must be terminated on or before the 1st October 1909.

Should the Exhibitor fail to comply with above dates, he will *ipso facto* lose all claim to his space, the admission certificate will be deemed cancelled and the space rent paid will be forfeited to the Exhibition Company, without any legal and other proceedings being required. In such case, the Executive Committee will be entitled to remove unfinished installations or to have the same completed at Exhibitor's expense and risk.

Special Charges.

ART. 29.—Exhibitors requiring steam, water, gas, electricity, shall state in their application for admission the hourly quantity so required.

When motive power is required, the intended rate of speed and requisite power should be stated.

The adoption of electric motors, as also the foundations and expenses of private installation are for Exhibitor's account. Steam, water, gas, electricity and any mechanical motive power will be supplied according to the tariff providing for same.

Separate bye-laws will determine the conditions affecting the erection and working of mechanical and electrical machinery, apparatus and appliances, and will be forwarded to Exhibitors on application.

Exhibitor's co-operation towards the services of the Exhibition.

ART. 30.—Exhibitors wishing to place all or part of the work performed by their machinery, apparatus and appliances, at the disposal of the Exhibition with the view of co-operating, on terms to be agreed upon, towards the production, distribution and utilisation of steam, water, gas, and motive power, or towards the lighting and handling services, shall submit their propositions to the Executive Committee prior to the 15th January 1909.

International Jury of Awards.

ART. 31.—An International Jury of Awards will be formed, the Members of which will be appointed by their respective Governments; this Jury will be organised and controlled by the Commissioner-General of the Belgian Government. Jurors of non-officially represented Countries shall be proposed by the Delegates of the Exhibitors of those nations and, if necessary, their appointment will have to be sanctioned by the Belgian Government, on the recommendation of the Commissioner-General of the Government.

The Jury will officiate as soon after the opening of the Exhibition as possible.

The Awards will consist of Grand Prize Diplomas; Diplomas of Honour; Diplomas of Gold, Silver and Bronze Medals, and Diplomas of Honourable Mention. These Diplomas may be accompanied by a Medal. The Awards will be delivered before the close of the Exhibition, in a grand fête held specially for the occasion; and a full list of Awards will receive the greatest publicity.

International Test Committees.

ART. 32.—International Committees may be formed for tests or trials similar to those of former Exhibitions.

Lottery.

ART. 33.—A lottery will be organised under the authority and control of the Government: the prizes will be purchased from Exhibitors or as regards series of tickets issued prior to the opening from such persons as shall have given a written undertaking to exhibit.

CHAPTER III.

ADMINISTRATION AND POLICE.

Exhibition of Products under names of Applicants.

ART. 34.—Products must be exhibited under the names of those persons who signed the applications for space; this rule will be strictly enforced.

Exhibitors who intend showing industrial art productions of which they are not the originators, must inform the Executive Committee and furnish due authorisation from the rightful proprietors.

ART. 35.—Exhibitors are free to add to their name, or style or firm the names of other persons having contributed to the merit and value of the articles exhibited.

Price of Exhibits.

ART. 36.—Exhibitors are invited to indicate the Market Price of the articles shown, as a guide to the Jury, as well as for the information of the public and of the Lottery Purchase Commission.

PROTECTION OF EXHIBITS.

Insurance—General and Special Supervision.

ART. 37.—Due precautions will be taken to protect all exhibits and packages from damage, and a general watch will be established to prevent the fixtures and exhibits being stolen, strayed or damaged.

The Government nor the Exhibition Company shall in no case be held responsible for injury or damage, whatever be the extent, suffered by Exhibitors in consequence of theft, fire, thunder and other storms, or floods, gas, explosions, flaw in construction or arising from any other cause whatsoever, nor shall Exhibitors have any claim on account of these risks, either against the Government or against the Exhibition Company.

Exhibitors desirous of insuring their goods, packages, etc., must do so through their own Agents and at their own cost.

Exhibitors will be answerable to the Exhibition Company and to other Exhibitors and parties, for all damage caused by their exhibits or by persons in their employ.

The Commissioners of participating countries as well as Exhibitors, whether singly or collectively, will be free to appoint under their own responsibility private inspectors and superintendents from a list approved by the Executive Committee; these officers will have to submit to the regulation framed by the Executive Committee.

Right to sell.

ART. 38.—Articles of every-day sale, also those manufactured or made up on the spot may be sold and delivered to visitors on payment of a percentage, to be fixed by agreement and compliance with special by-laws; but no such sales may take place in the Halls without a special authority in writing from the Executive Committee.

No article of food or drink can be served within the Halls except by authority of the Executive Committee.

A special agreement with the Executive Committee will regulate the sale of refreshments or eatables in the Gardens and grounds of the Exhibition and determine the tax to be paid.

Entries.

ART. 39.—One single free ticket will be issued to each Exhibitor or his Agent approved of by the Executive Committee, if the nature and importance of the exhibits require the continuous attendance of such Agent. This ticket shall not be transferable and shall be withdrawn if proved to have been made over or lent, without prejudice of further action. It must be signed by the Exhibitor or his Agent, shew the photograph of bearer, and mention the group and class to which he belongs. It will, moreover, bear the stamp of the Executive Committee.

Any person acting as Agent to several Exhibitors will be entitled to one free ticket only. Each Exhibitor will be entitled to one or more tickets for persons in his employ, but giving admission from 8 to 10 A.M. only.

Exhibitors of machinery in operation shall be entitled to one or more cards available for their men whilst the machinery is working.

The number of tickets to be issued will be solely determined by the Commissioner-General of the Government and the Executive Committee, they will be withdrawn in case of misuse or fraud.

The entries will be regulated by special rules.

Exhibition to be treated as an actual Bonded Warehouse.

ART. 40.—The Exhibition will be treated as an actual bounded warehouse, foreign goods intended to appear at the Exhibition being allowed provisional duty-free importation subject to being afterwards re-exported and complying with such formalities as the Belgian Government may impose.

Subsequent Rules.

ART. 41.—Rules will be issued later on, for regulating the despatch, reception, handling, installation and return of goods; and also for providing for the organization of supervison, customs, entries to the Exhibition, right of sale, formation and proceedings of the International Jury of Awards.

Special by-laws will provide for the establishment and working of mechanical and electric machinery, apparatus and appliances.

ART. 42.—Exhibitors or Contractors intending to erect constructions or stalls in the Gardens of the Exhibition must conform to the conditions which will be framed by the Executiue Committee.

Separate and independent rules will regulate the licensing of special paying shows and eating or drinking establishments or places of performance, restaurants, bars, luncheon rooms, tobacco shops, etc., etc.

ART. 43.—Producers and manufacturers will by the mere fact of accepting the quality of Exhibitors, submit to the General or Special regulations and to such other measures of order and police as may be enacted in the future.

Exhibitors or contractors will be required to elect domicile at Brussels.

CHAPTER IV.

ANNEXED SHOWS.—CONGRESSES AND CONFERENCES.

Special Shows—Congresses and Conferences.

ART. 44.—Additional and temporary Shows, Congresses and Conferences, Lectures, Grand Fêtes; Choral and Musical Competitions, Concerts, etc., etc., will be organised during the Exhibition.

ART. 45.—The Executive Committee propose to promote International Congresses, and in a general way, will consider and, if thought fit, patronize all such schemes as are of a realisation likely to further enhance the attraction and éclat of the Exhibition.

Address for Communications.

ART. 46.—All communications connected with the Exhibition are to be addressed by prepaid letter to The President of the Executive Committee, 34, Rue des XII Apotres, Brussels.

Resolved in Executive Committee Meeting held on the 24th January 1908.

CLASSIFICATION ACCORDING TO GROUPS.

GROUP I.—EDUCATION.

Class 1.—Education of children. Primary education. Education of adults.
Class 2.—Secondary education.
Class 3.—Higher education. Scientific institutions.
Class 4.—Special artistic education.
Class 5.—Special agricultural education.
Class 6.—Special industrial and commercial education.

GROUP II.—WORKS OF ARTS.

Class 7.—Paintings. Cartoons. Drawings.
Class 8.—Engraving and lithography.
Class 9.—Metal and fine stone carving and engraving.
Class 10.—Architecture.

GROUP III—INSTRUMENTS AND GENERAL METHODS CONNECTED WITH LETTERS, SCIENCES AND ARTS.

Class 11.—Printing. Sundry impressions.
Class 12.—Book-trade. Musical editions. Book-binding (plant and products). Newspapers. Posters.
Class 13.—Photography.
Class 14.—Geographical and cosmographical maps and appliances. Topography.
Class 15.—Instruments of precision. Coins and medals.
Class 16.—Medicine and Surgery.
Class 17.—Musical instruments.
Class 18.—Theatrical art plant.

GROUP IV.—PLANT AND GENERAL METHODS CONNECTED WITH MACHINERY.

Class 19.—Steam engines.
Class 20.—Various other motors.
Class 21.—Various apparatus of general mechanics.
Class 22.—Machine-tools.

GROUP V.—ELECTRICITY.

Class 23.—Mechanical production and utilisation of electricity.
Class 24.—Electrochemistry.
Class 25.—Electric lighting.
Class 26.—Telegraphy and Telephony.
Class 27.—Various applications of electricity.

GROUP VI.—CIVIL ENGINEERING.—MEANS OF TRANSPORT.

Class 28.—Civil engineering materials. Equipment and methods.
Class 29.—Models, plans and drawings of public works.
Class 30.—Coachbuilders' and cartwrights' trades.—Saddle and Harness makers' trades.
Class 31.—Motor-cars and cycles.
Class 32.—Railway and Tramway plant.
Class 33.—Commercial Navigation equipment.
Class 34.—Aërial Navigation.

GROUP VII.—AGRICULTURE.

Class 35.—Rural husbandry plant and methods.
Class 36.—Viticultural implements and methods.
Class 37.—Agricultural implements and methods.
Class 38.—Agronomy.—Agricultural statistics.
Class 39.—Agricultural products of vegetable origin used as foodstuffs.
Class 40.—Agricultural products of animal origin used as foodstuffs.
Class 41.—Non-edible agricultural produce.
Class 42.—Useful insects and their products.—Noxious insects and vegetable parasites.

GROUP VIII.—Horticulture and Arboriculture.

Class 43.—Horticultural and Arboricultural implements and methods.
Class 44.—Pot-herbs.
Class 45.—Fruit-trees and fruits.
Class 46.—Ornamental trees, shrubs, plants and flowers.
Class 47.—Hot-house plants.
Class 48.—Horticultural and Nursery seeds and stock.

GROUP IX.—Forestry.—Hunting and Shooting.—Fisheries.—Fruit gathering.

Class 49.—Plant and methods for forest exploitation and industry.
Class 50.—Forest produce.
Class 51.—Hunting and shooting requisites.
Class 52.—Hunting and shooting produce.
Class 53.—Fishing tackle, implements and produce.—Water culture.
Class 54.—Fruit-gathering tackle, implements and produce.

GROUP X.—Foodstuffs.

Class 55.—Food industry implements and methods.
Class 56.—Farinaceous goods and by-products.
Class 57.—Bakers' and Pastrycooks' goods.
Class 58.—Preserved meat, fish, vegetables and fruits.
Class 59.—Sugar and confectionery, condiments and stimulants.
Class 60.—Wines and brandies.
Class 61.—Syrups and liqueurs, various spirits, industrial alcohols.
Class 62—Miscellaneous beverages.

GROUP XI.—Mining.—Metallurgy.

Class 63.—Mine, ore and quarry working.
Class 64.—Heavy metallurgy.
Class 65.—Light metallurgy.

GROUP XII.—Decoration and Furnishing of Public Buildings and Private Houses.

Class 66.—Fixed decoration of Public buildings and private houses.
Class 67.—Stained window glass.
Class 68.—Painted wall papers.
Class 69.—Cheap furniture and costly furniture.
Class 70.—Carpeting, tapestry and other furnishing stuffs.
Class 71.—Movable decoration and upholstery work.
Class 72.—Ceramic ware.
Class 73.—Crystal and glass wares.
Class 74.—Heating and ventilating apparatus and methods.
Class 75.—Apparatus and methods for non-electric lighting.

GROUP XIII.—Yarns.—Textile Fabrics.—Clothing.

Class 76—Plant and methods connected with spinning and ropemaking.
Class 77.—Plant and methods used in weaving.
Class 78.—Plant and methods for bleaching, dyeing, printing and sizing textile fabrics through their different stages.
Class 79.—Plant and methods for sewing and making up clothing.
Class 80.—Cotton yarns and fabrics.
Class 81.—Yarns and fabrics of linen, hemp, etc. Ropemaker's wares.
Class 82.—Woollen yarns and fabrics.
Class 83.—Silk and textiles of silk.
Class 84.—Lace, embroideries and trimmings.
Class 85.—Men's, women's and children's clothing: making up and sewing trades.
Class 86.—Various trades in the clothing line.

GROUP XIV.—Chemical Industry.

Class 87.—Chemical arts and pharmacy.
Class 88.—Paper making.
Class 89.—Hides and skins.
Class 90.—Perfumery.
Class 91.—Tobacco.

GROUP XV.—Miscellaneous Industries.

Class 92.—Stationery.
Class 93.—Cutlery.
Class 94.—Gold and silversmiths' wares.
Class 95.—Jewellery.
Class 96.—Clock and watch makers' goods.
Class 97.—Artistic bronze, cast and other iron work. Embossed metals.
Class 98.—Brush, morocco, turnery and basket trades.
Class 99.—India rubber and gutta-percha industry.—Travelling and camping requisites.
Class 100.—Knick-knacks.

GROUP XVI.—Social Economy.

Class 101.—Apprenticeship. Protection of working children.
Class 102.—Labour contract. Participation in profits—Professional Syndicates.
Class 103.—Large and minor industry. Co-operative associations of production or credit.
Class 104.—Co-operative societies of consumption.
Class 105.—Large and minor cultivation.—Agricultural associations.
Class 106.—Regulation of labour.—Health and security of workmen.
Class 107.—Working men's houses.
Class 108.—Provident institutions.
Class 109.—Institutions for the intellectual and moral development of workmen.
Class 110.—Public or private initiative in view of the welfare of citizens.

GROUP XVII.—Public Health.—Charitable Institutions.

Class 111.—Public Health.
Class 112.—Charitable Institutions.

GROUP XVIII.—Practical Education.—Economic Institutions.—Female Handicraft.

Class 113.—Education.
Class 114.—Sciences. Arts. Economic Institutions.—Charity.
Class 115.—Female Handicraft.

GROUP XIX.—Trade.—Colonisation.

Class 116.—Trade.
Class 117.—Methods of colonisation.
Class 118.—Colonial plant.
Class 119.—Special products for export to the Colonies.

GROUP XX.—Land and Sea Forces.

Class 120.—Ordnance equipment and appliances.
Class 121.—Military engineering and services connected therewith.
Class 122.—Naval engineering. Hydraulic work. Torpedoes.
Class 123.—Cartography. Hydrography. Various instruments.
Class 124.—Administrative services.
Class 125.—Sanitation and sanitary appliances.

GROUP XXI.—Sports.

Class 126.—Exercise of children and adults.—Theory and practice.
Class 127.—Games and sports for children and adults.
Class 128.—Game and sport equipments.

GROUP XXII.—Congresses and Conferences.

Ordered that the foregoing papers be published in the Supplement to the *Gazette of India* for general information, and that copies be forwarded to the Local Governments and Administrations named in the margin for information with the request that the papers may be published in the Local *Gazette*.

The Government of Madras.

Moderate rain fell for 5 days. Sowing of paddy continuing in Kalahandi, Patna and Rairakhol. Transplantation going on in almost all the States. Puddling of paddy going on in Hindol, Baramba, Daspalla, Athgarh, Ranpur, Dhenkanal, Maurbhanj and Nayagarh. *Behura* operation (re-ploughing) nearly completed in Baramba and Bonai. All crops in Baramba, Daspalla, Khandpara, Ranpur, Boad, Rairakhol and Gangpur, sugarcane in Narsingpur, Hindol, Pal Lahera, Athgarh, Keonjhar, Patna, Nayagarh and Talcher, cotton in Hindol, Nayagarh and Talcher, Indian-corn, *gulji* and *gora* paddy in Keonjhar, doing well. Agricultural stock, fodder and water sufficient. Price of rice stationary in 20 States and fallen from 8 to 7 seers in Maurbhanj and 10 to 9 seers in Talcher since last week.

* The report is for the week ending the 25th July 1908.

GENERAL SUMMARY.—Rain was general all over the Province. The fall was heavy in Darjeeling and also in Balasore, Sambalpur and Cooch Behar; it was light in all other parts of the Province, Bihar excepted, where the fall was scanty. In Bihar more rain is urgently wanted for the proper growth of the standing *bhadoi* crops and for the transplantation of winter paddy. The condition of jute is fair, except in Howrah, the 24-Parganas, Jessore and Khulna. Paddy seedlings are suffering for want of sufficient rain in Patna, Gaya and Saran. Damage to paddy by insect-pests is reported from the 24-Parganas. Sugarcane is doing well. The price of common rice has risen in the 24-Parganas, Gaya, Darbhanga, Purnea and Palamau, has fallen in Bankura, Jessore, the Sonthal Parganas, Puri and Sambalpur, and has been stationary in the remaining districts. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. The supply of fodder and water is sufficient for the Province. Cattle-disease is prevalent in Jessore, Gaya, Saran, Purnea, the Sonthal Parganas, Sambalpur, Hazaribagh, Palamau and Manbhum. The number of persons on gratuitous relief was 30,709, of whom 15,352 were in Orissa. Test works in Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 9,114 persons. The number of persons on famine relief works in Ranchi was 10,737.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 4th August 1908.

N. N. BANERJEI,
for Offg. Director of Agriculture, Bengal, on tour.

No

SUMMARY OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL AND IN EASTERN BENGAL AND ASSAM FOR THE MONTH OF MAY 1908.

DURING the first week of the month, the position of the trough of low pressure permitted the moist air from the Bay to flow freely into Eastern Bengal and Assam. In the latter area rain fell daily, but in Eastern Bengal it occurred chiefly on the last three days of the week, extending on the 7th into Bihar. On the 3rd nor'westers with rain were numerous in Bengal. Temperature was in general excess up to the 5th, but owing to the rainfall a rapid fall of temperature took place and weather was cooler than usual except in the south-east. At the beginning of the second week a shallow depression appeared over the Andaman Sea on the 8th, and as it advanced northward, it caused moderate to heavy rain in the coast districts, but had disappeared by the morning of the 11th without giving rise to very stormy weather. Generally rainfall occurred in all parts of the two Provinces, except South Bihar, but decreased towards the end of the week, and weather was almost dry on the 13th. Temperature was normal or in defect, the deficiency being most marked on the 8th. At the beginning of the third week pressure conditions were not favourable to rainfall over the two Provinces. The trough of low pressure widened out into a large area of low pressure, covering Burma and Northern India, the barometer being lowest in Burma. The inflow of moist air into North-East India was consequently checked and weather was dry up to the 18th. The trough of low pressure then commenced to reform and rainfall gradually increased in the northern districts, and from the 19th to the 21st was fairly general in Assam and Eastern Bengal. During the fourth week of the month rain fell every day in Eastern Bengal and Assam, and on the 24th the position of the trough of low pressure permitted an extension of rainfall into Chota Nagpur. On the 25th, rainfall extended into Bihar, but on the 26th retreated eastward, being confined chiefly to Eastern Bengal and Assam for the rest of the week. During the last five days of the month weather was dominated by an area of low pressure which appeared over the south-east of the Bay in front of an advance of monsoon winds. Rainfall was therefore scanty in North-East India, as the depression checked the usual inflow of moist southerly winds.

Summary of Temperature.—Mean temperature was in general excess over the whole area, the departure being greatest in Bihar, where the average mean was 2° above the normal mean of the month.

The highest temperature recorded was 114°·1 at Sambalpur and the lowest 62°·9 at Monghyr.

The following table gives the summary of the temperature of each of the seven meteorological divisions of the Provinces of Bengal and of Eastern Bengal and Assam for the month of May 1908:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE. Highest observed during month.	Lowest observed during month.	Average for month. Of highest of each day.	Of lowest of each day.	Of mean for each day.	Average mean of month above or below normal mean of month.
Bengal	113·5	65·2	97·9	77·8	87·0	+ 0·5
Eastern Bengal, North	100·1	63·0	91·5	74·0	82·8	+ 0·4
Eastern Bengal, South	98·8	67·3	91·2	75·5	83·3	+ 0·5
Bihar	113·3	62·9	101·8	77·8	89·8	+ 1·9
Orissa	114·1	68·3	97·5	80·7	89·1	+ 0·5
Chota Nagpur*	113·0	67·9	103·7	77·7	90·7	+ 0·2
Assam	95·6	64·3	87·0	72·1	79·6	+ 0·2

* Purulia not included.

Summary of Rainfall.—The rainfall registration is in the hands of the Director of Agriculture, Bengal, and the usual data regarding the actual and normal rainfall during the month are published by that officer. A short table, however, is attached to this report giving the rainfall recorded during the month at the head-quarters of the various districts of the Province. With a few local exceptions the precipitation of the month was more or less below normal at all recording stations, the deficiency reaching 65 per cent. in Orissa, 52 per cent. in Bihar, and 30 per cent. in Bengal.

Actual and average rainfall and departure from normal for the month of May 1908.

	Inches.
The mean pressure of the seven days	29·534
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·548
	Hours.
The total number of hours of bright sunshine	38·9
The maximum possible number of hours of sunshine	92·2
	°
The mean temperature of the seven days	83·7
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·0
The extreme variation of temperature	12·4
The maximum temperature	90·6
	Miles.
The highest velocity of the wind in one hour	13
	%
The mean relative humidity	85
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 26th July to 1st August 1908	1·39
The average fall of the corresponding period for 24 years, Surveyor-General's Office	4·04
The total fall from 1st January to 1st August 1908	56·53
The average fall of the corresponding period for 24 years, Surveyor-General's Office	35·96

The mean pressure, temperature, etc., are deduced from the traces of the Knudsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; d, drizzling rain; p, passing temporary showers.

WEATHER AND CROP REPORT.

For the week ending the 10th August 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	2·28	7	7	Weather seasonable. Rainfall at Katwa 2·43, at Kalna 3·18 and at Raniganj 1·79 inches. An insect-pest doing damage to paddy in parts of the district. Condition of jute fair except at Katwa subdivision. Fodder and water sufficient. No cattle-disease. 390 persons receiving gratuitous relief in Katwa.
2	BIRBHUM ...	1·98	7	7	Weather seasonable. Rainfall at Rampur Hat 1·56 inches. Transplantation of paddy continuing. Fodder and water sufficient.
3	BANKURA ...	2·44	7½	7½	Weather seasonable. Rainfall at Vishnupur 3·38 inches. Transplantation of winter rice almost finished. Prospects of crops good, but paddy damaged at places by a kind of insect. Persons gratuitously relieved—214 men, 647 women and 213 children—total 1,074 on the 7th instant. No cattle-disease. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 6 to 7 seers per rupee in the affected tracts.
4	MIDNAPORE .	2·74	6	6	Rainfall at Contai 2·14, at Tamluk 2·58, and at Ghatal 4·00 inches. Transplantation of paddy going on. Some damage by insects reported from Ghatal and Garhbeta. Prospects of *aus* good, and of jute fair. Common rice selling at 7 seers per rupee at Contai and Ghatal, and at 6½ seers at Tamluk.
5	HOOGHLY ...	0·76	6½	6½	Weather cloudy. Rainfall in the district general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute, and sugar-cane fair. *Aus* and *aman* paddy being damaged by an insect known locally as *Dhasa*. Weeding of jute and *aus* paddy and transplantation of *haimantik* paddy continuing. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	2·45	6¾	6¾	Weather seasonable. Transplantation of paddy rigorously pushed on. Prospects of jute likely to improve but at present not very hopeful. No cattle-disease. Fodder and water sufficient.
7	24-PARGANAS	2·36	6	6	Weather seasonable. Rain sufficient everywhere. Jute not favourable. Paddy damaged by insects in parts of Barasat, Basirhat and Baduria thanas and by recent heavy rains in parts of Basirhat and Diamond Harbour subdivisions and in Vishnupur, Bhangar and Jaynagar thanas. Common rice selling at 6½ seers per rupee at Barasat, at 6¾ seers at Basirhat, and at 7 seers at Diamond Harbour. Barrackpore report not received.
8	NADIA ...	1·70	6⅝	6⅜	Rainfall at Ranaghat 4·26, Chuadanga 2·15, Meherpur 0·62 and at Kushtia 1·71 inches. Prospects of *aus* paddy fair. Insect-pests doing damage to *aus* paddy in Meherpur and Ranaghat subdivisions. Prospects of jute fair. Prices of staple food-grains slightly fallen. Stocks of food-grains insufficient. Scarcity prevalent in Meherpur subdivision. Condition of cattle fair. Fodder and water sufficient. Persons attending 20 test-works on 6th—men 4,002, women 7—total 4,009. Rupees 1,571 received by 2,616 persons as gratuitous relief.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	2·15	7	7	Weather hot and cloudy. Rainfall at Lalbagh 1·32, at Kandi 0·54, and at Jangipur 2·07 inches. Transplantation of *aman* going on, retarded in some places in Jangipur subdivision for want of sufficient rain. Prospects of jute fair. Fodder and water sufficient. No cattle-disease. Stocks of food-grains reported not to be sufficient in Jangipur and Kandi subdivision.
10	JESSORE ...	1·01	7 7/16	7 3/16	Weather seasonable. Rainfall at Jhenidah 0·75, at Magura 0·76, at Narail 0·95 and at Bangaon 1·86 inches. Transplantation of *aman* paddy going on, and *aus* paddy being reaped in some places. Condition of jute not favourable. More rain wanted. Stocks of food-grains being supplemented by imports of Burma rice. Condition of agricultural stock good on the whole. No cattle-disease. Fodder and water sufficient. High prices continuing. 92 persons employed on District Board test-works and 3,559 persons given gratuitous relief.
11	KHULNA ...	1·16	8½	8½	Weather seasonable. Rainfall at Bagerhat 1·06 and at Satkhira 3·73 inches. Prices of staple food-crops stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. More rain wanted. No apprehension of famine at present. Prospects of standing crops fair but of jute not favourable. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	0·78	7 10†	7¼ 10½	Weather hot and cloudy. Prospects of *bhadoi* crops fair. More rain wanted for transplantation of paddy. Paddy seedlings withering in places. Sugarcane doing well. Prices almost stationary. Food-stocks likely to be sufficient if not largely exported. Condition of cattle good. Fodder and water sufficient.
13	GAYA ...	0·82	7¾* 8¾†	8* 9¼†	Weather cloudy with scanty rainfall. Rainfall during the week general, but scanty, especially at the Sadar and Nawadah subdivisions. Prospects of sugarcane and *bhadoi* crops fair, but the latter suffering from want of rain. Transplantation of paddy seedlings continuing in irrigated areas, but in most places rain urgently wanted for this operation. Fodder and water for cattle ample. Cattle-disease continuing in some villages in the Nawadah subdivision.
14	SHAHABAD ...	3·42	8 9†	8 10†	Rainfall at Buxar 2·00, at Bhabhua 2·05, at Sasaram 0·32, and at Dehri 0·71 inches. Sugarcane doing well. Immense good done to standing crops by rainfall of the week. More rain urgently wanted for transplantation of paddy seedings. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Condition of agricultural stock normal. Fodder and water sufficient.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee. This week.	Price of common rice in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
15	SARAN ...	1·83	8¼ 10½*	8 10*	Weather hot. Rainfall at Siwan 5·17 and at Gopalganj 4·04 inches. Weeding of *bhadoi* crops and transplantation of *aghani* paddy going on. Much good done to standing crops, by the rain during the week but more rain still wanted in Sadar subdivision. Prices of food-grains stationary. Food-stock resources external. Condition of agricultural stock good. Fodder and water sufficient.
16	CHAMPARAN ...	0·95	8 10½*	8 10½*	Weather hot and cloudy. Rainfall at Bettiah 1·44 inches and heavier at some other stations. Weeding of *bhadoi* crops continuing and transplantation of paddy resumed. Much good done to standing crops by the rainfall during the week. No cattle-disease. Condition of agricultural stock good. Fodder and water sufficient. Prospects of jute and sugarcane fair.
17	MUZAFFARPUR	...	8 10¾*	8¼ 10¾*	Rainfall at Sitamarhi 2·85 and at Hajipur 0·59 inches. Transplantation of paddy resumed on low lands. *Aghani* paddy being sown in Hajipur subdivision. Prospects of standing crops improved owing to rain. Jute good in Belsand and Bairagnia thanas of Sitamarhi subdivision. Condition of agricultural stock good. Fodder and water sufficient. Cattle-disease reported from Pupri in Sitamarhi subdivision. Common rice and maiso selling at 7¾ and 10 seers per rupee, respectively, at Sitamarhi and at 7⅞ and 10¼ seers, respectively, at Hajipur. No apprehension of scarcity.
18	DARBHANGA ...	1·47	8¼ 10*	8¼ 11*	Weather hot, at times cloudy. Rainfall during the week chiefly confined to Darbhanga thana, in Sadar subdivision, which has improved the condition of *bhadoi* crops. Rain urgently wanted in Madhubani subdivision. Transplantation of paddy retarded for want of rain everywhere. No apprehension of scarcity. Agricultural stock sufficient. Fodder and water sufficient. Cattle-disease reported from two villages in Benipatti thana.
19	MONGHYR ...	2·18	7 9½*	7 9½*	More rain urgently wanted. Light showers of rainfall during the week, but not at all sufficient for transplantation of paddy seedlings which are withering in some places. *Bhadoi* crops growing well. Prices of food-grains stationary. Fodder and water sufficient. Cattle-disease reported from one village in Khagaria thana.
20	BHAGALPUR ...	1·42	$8\frac{3}{16}$ 10⅛*	$8\frac{3}{16}$ 10⅛*	Weather hot and cloudy. Rainfall at Supaul 1·44 and at Madhipura 0·50 inch. Much good done to standing crops by recent rain. More rain wanted for transplantation of paddy and for *marua* especially in Madhipura. Condition of *bhadoi* crops bad in Madhipura and Supaul, but good in parts of Sadar and Banka subdivision. Sugarcane fair. Jute fair in Madhipura, but poor in Supaul. No cattle-disease. Fodder and water sufficient. Prices of staple food-grains rising in Madhipura and falling in Supaul, elsewhere stationary.
21	PURNEA ...	0·92	7	7	Weeding of *bhadoi* paddy and transplantation of *aghani* paddy going on. Harvesting of jute commenced in places. More rain urgently wanted. Condition of jute fair. Condition of agricultural stock good. Stocks of food-grains adequate. No cattle-disease reported. Fodder and water sufficient. Common rice selling at 7 seers per rupee at Kishanganj and at 7¾ seers at Araria.

* The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers per rupee. This week.	Price of common rice, in seers per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1		3	4	5	6
		Inches			
22	DARJEELING ...	2·52	7 10†	7 10†	Weather seasonable. Hills—Maize growing and being harvested in some places. Potatoes being harvested. *Chota marua* and *bhadoi* paddy still standing in some places and being harvested in other places. Winter rice and *bara marua* being sown. Terai—Transplantation of winter rice going on. Condition of standing crops including jute not very favourable. Supply of food-grains sufficient.
23	SONTHAL PARGANAS.	2·93	$6\frac{1}{4}$ 9†	$6\frac{5}{16}$ 9†	Rainfall at Deoghur 1·67, at Godda 1·64, at Jamtara 2·97, at Pakour 0·92 and at Rajmahal 1·12 inches. More rain wanted in Pakour. Transplantation of paddy going on. Prospects of maize and jute fair. Prices of staple food-grains almost stationary. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Small loans being given to poorer cultivators. Fodder and water sufficient.
24	CUTTACK ...	5·35	$7\frac{3}{8}$	$7\frac{3}{8}$	Rainfall general. *Biali* paddy, *mandia*, sugarcane, cotton, turmeric and jute growing well. *Saradh* paddy being transplanted. Condition of cattle generally good. Fodder and water sufficient. Prospects of standing crops good. 679 men, 1,574 women and 3,606 children—total 5,859—given gratuitous relief. Test-works attended by 164 men, 344 women and 713 children—total 1,221.
25	BALASORE ..	7·88	$7\frac{1}{2}$	$7\frac{1}{2}$	Weather seasonable. Rainfall at Bhadrak 1·70 inches. Puddling, weeding and transplanting of *saradh* paddy continuing. *Ashu* paddy and sugarcane thriving. Weeding of jute continuing and its prospects fair. Vegetables doing well. Stocks of food-grains insufficient. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas. Fodder and water sufficient. Common rice selling at 7 seers per rupee at Bhadrak. 149 men, 685 women and 678 children—total 1,512—at Sadar, and 302 men, 1,946 women and 2,729 children—total 4,-77—at Bhadrak receiving gratuitous relief. 14 men, 108 women and 51 children—total 173—attending test-works at Bhadrak.
26	ANGUL ...	6·37	6	6	Weather seasonable. Rainfall at Phulbani 10·59 inches. Standing crops doing well. Transplantation of winter paddy in progress. Maize and millets in flower in some places. Condition of agricultural stock fair. Common and cheapest rice selling at $7\frac{1}{2}$ seers per rupee in Khondmals. Persons gratuitously relieved—54 men, 164 women and 462 children—total 680—in Angul, and 119 men, 169 women and 73 children—total 361—in Khondmals. Persons on test-works—148 men, 101 women and 19 children—total 268—in Angul, and 46 men in Khondmals.
27	PURI ...	1·37	$7\frac{3}{16}$	$\frac{3}{16}$	*Biali* paddy growing well. Puddling of *saradh* paddy continuing. Miscellaneous crops getting on well. Fodder and water sufficient. Men 266, women 189 and children 732—total 1,187—attending test-works. Recipients of gratuitous relief—men 359, women 1,016 and children 1,032—total 2,407. Piece-works attended by 69 men.

† Price maize in seers per rupee.

Daily light showers. Sowing of paddy continuing in Rairakhol. Puddling going on in Athmallik, Baramba, Nayagarh Ranpur, Hindol, and Daspalla. *Behura* operation (reploughing) finished in Baramba; in progress in Mayurbhanj, Bonai and Rairakhol. Transplantation continuing in almost all the States, but progress slow in Kalahandi owing to insufficient rain. All standing crops in Daspalla, Athmallik, Baramba, Khandpara, Boad, Nilgiri and Gangpur, sugarcane in Talcher, Nayagarh, Narsingpur, Keonjhar, Kalahandi, Athgarh and Patna, cotton in Talcher and Nayagarh, Indian-corn in Keonjhar and Athgarh, *gora* paddy in Keonjhar and *arhar* and *bajra* in Athgarh and paddy plants in Narsingpur in good condition. Agricultural stock, fodder and water sufficient. Price of rice stationary in 20 States, risen from 11 to 10 seers in Patna and fallen from 6 to 7 in Rairakhol since last week.

* The report is for the week ending the 1st August 1908.

GENERAL SUMMARY.—The rainfall during the week under report was heavy in Cuttack, Balasore, Angul and in parts of Saran, moderate in Shahabad and in the districts of Chota Nagpur and light in other districts. In Bihar it has been generally insufficient, and more rain is urgently wanted here for transplantation of paddy, the progress of which is being retarded in several districts. *Bhadoi* crops and paddy seedlings in Patna, Gaya and Monghyr are also suffering from deficient rain. Sugarcane is generally doing well throughout the Province. The condition of jute is fair, except in Howrah, the 24-Parganas, Jessore and Khulna. Insect pests are doing damage to the newly transplanted paddy in Burdwan, Bankura, Midnapore, Hooghly, the 24-Parganas and Nadia. Some damage has also been done by insects to the *Gondli* millet crop in Ranchi. The price of common rice has risen in Patna, Gaya and Muzaffarpur, and has fallen in Bankura, Nadia, Jessore, Saran, the Sonthal Parganas, Sambalpur, Hazaribagh, Palamau and Manbhum. It has been stationary in the remaining districts. Stocks of food-grains are insufficient in Murshidabad, Nadia, Balasore and Palamau. There is no complaint regarding the supply of fodder and water. Cattle-disease is reported from Gaya, Muzaffarpur, Darbhanga, Monghyr, Sambalpur, Ranchi, Palamau and Manbhum. 32,561 persons were given gratuitous relief, of whom 15,796 belong to Orissa. Test-works in Nadia, Jessore, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 7,957 persons. The number of persons on relief-works in Ranchi was 9,824.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 11th August 1908.

N. N. BANERJEI,
for *Offg. Director of Agriculture, Bengal, on tour.*

CALCUTTA,
The 10th August 1908.

A. N. DAS,
Under-Secy. to the Govt. of Bengal.

Abstract of the Results of Meteorological Observations taken at the Alipore Observatory in the month of July 1908.

	Inches.	Date.	Hour.
The mean pressure of the month	29·551		
The average pressure of July from 44 years' registers ...	29·537		
The highest pressure in the month	29·651	29th	10
The lowest pressure in the month	29·405	31st	16
The range of pressure	0·246		
	Hours.		
The total number of hours of bright sunshine during the month	113·0		
The maximum possible number of hours of sunshine ...	413·1		
	°		
The mean temperature of the month	83·2		
The average temperature of July from 20 years' registers ...	83·1		
The highest temperature in the month	91 9	4th	
The lowest temperature in the month	76 0	21st	
The range of temperature during the month ...	15·9		
The mean daily range of temperature	9·2		
The greatest range of temperature in one day	12·0	12th	
	Per cent.		
The mean humidity of the month	87		
The average humidity of July from 20 years' registers ..	87		
	Inches.		
The mean vapour tension of the month . ..	0·948		
The average vapour tension of July from 20 years' registers ...	·962		
The mean cloud proportion of the month	8·52		
The average cloud proportion of July from 31 years' registers	8·10		
	Inches.		
The total rainfall of the month	24·64		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 8 feet above the ground)	23·83		
The average fall of July from 24 years' registers ...	12·31		
The greatest fall in 24 hours	5·82	8th	
	Days.		
The number of rainy days in the month	24		
The average number of rainy days in July from 24 years' registers	19		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	139·9		
The mean difference of sun and air temperatures	51·8		
The greatest sun temperature	153·4	30th	
The greatest excess of sun over air temperature	62 8	30th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76 6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·3		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	1·0	21st	
	Miles.		
The mean movement of the wind per day	130·1		
The greatest movement of the wind in one day	308 0	8th	
The greatest movement of the wind in one hour	19·0	8th	7 to 8 A.M.

The number of hours with winds from each of the eight points—

	Inches.
The mean pressure of the seven days	29·576
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·584
	Hours.
The total number of hours of bright sunshine	31·0
The maximum possible number of hours of sunshine	91·4
	°
The mean temperature of the seven days	83·1
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83 0
The extreme variation of temperature	12·6
The maximum temperature	90·1
	Miles.
The highest velocity of the wind in one hour	13
	%
The mean relative humidity	87
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	87
	Inches.
The total fall of rain from 2nd to 8th August 1908	2·95
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·58
The total fall from 1st January to 8th August 1908	59·48
The average fall of the corresponding period for 24 years, Surveyor-General's Office	38·54

The mean pressure, temperature, etc., are deduced from the traces of the Knudsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder.

REPORT ON THE COTTON CROP OF BENGAL, AUGUST 1908.

THE following note is published for general information.

F. W. DUKE,

Offg. Chief Secy. to the Govt. of Bengal.

The 17th August 1908.

DEPARTMENT OF AGRICULTURE, BENGAL.

First Report on the Cotton Crops of Bengal, August 1908.

(On an average of the five years ending 1906-07, the area under cotton crop in the territory to which this forecast relates has represented some 0·38 per cent. of the total area under cotton in India.)

Explanatory.—This report deals with the area sown and prospects of the early crop, and furnishes information also regarding the progress made in the sowings of the late crop.

Character of the season.—The early cotton crop which is generally sown before the rains is important in the Sonthal Parganas, Sambalpur, Manbhum, Singhbhum and Ranchi.

Sowings were normal except in Manbhum, Angul, Palamau and parts of Monghyr where they were late owing to want of rain. The weather conditions have been generally favourable, Bankura, parts of Midnapore and of Monghyr and the Sonthal Parganas excepted, where prospects are not good. A little damage has been done to the crop by caterpillars in Sambalpur.

The chief late cotton-growing districts are Saran Muzaffarpur, Darbhanga, Singhbhum and Cuttack. Sowings were normal and the prospects of the crop are reported to be fair so far.

Area sown.—The area sown with early cotton is estimated at 40,506 acres, against 35,341 acres finally returned in the previous year.

It is not possible now to estimate the area that will be put under late cotton during the season, as sowings have not yet been completed. The information to hand shows that 28,760 acres have already been sown. In the final cotton forecast of 1907, the total area under the crop was shown as 34,924 acres.

CALCUTTA,
The 8th August 1908.

N. N. BANERJEI,
for *Offg. Director of Agriculture Bengal, on tour.*

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1908-1909.

No. 4226B., dated Calcutta, the 10th August 1908.

From—PANDIT RAMA BALLABHA MISRA, M A, Secretary to the Board of Revenue, L. P., Mis. Revenue Dept.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in charge: THE HON'BLE MR. E. W. COLLIN, I.C.S.

I AM directed to submit the following report on the state of the salt market for the first quarter of the year 1908-1909, comprising the months of April, May and June 1908.

2. The quantity of salt of every description cleared during the quarter amounted to 34,04,461 maunds as compared with 26,04,712 maunds in the previous quarter, and 32,21,915 maunds in the corresponding quarter of the previous year. The net amount of duty levied thereon was Rs. 30,87,387, as against Rs. 24,06,420 in the previous quarter, and Rs. 28,93,923 in the corresponding quarter of the previous year.

3. The subjoined Table I shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter, as compared with the figures of the corresponding quarters of the two previous years:—

TABLE I.

Whence imported.	1906-1907. First quarter. Imported.	1906-1907. First quarter. Cleared.	1907-1908. First quarter. Imported	1907-1908. First quarter. Cleared.	1908-1909. First quarter. Imported.	1908-1909. First quarter. Cleared.

Total	39,05,935	32,85,441	34,76,763	31,92,643	36,17,060	33,74,092

Compared with the corresponding quarter of the previous year, importations were greater by 4·04 per cent., but as compared with the same quarter of 1906-1907, they were less by 7·4 per cent., the corresponding figures for clearances are respectively 5·7 per cent., and 2·7 percent., in excess.

4. Table II shows the quantity of sea-imported salt remaining in the warehouses at the close of the quarter, as compared with the preceding four quarters:—

TABLE II.

WHERE STORED.	First quarter of 1907-1908.	Second quarter of 1907-1908.	Third quarter of 1907-1908.	Fourth quarter of 1907 1908.	First quarter of 1908-1909.

	Mds.	Mds.	Mds.	Mds.	Mds.
Sulkea Government Salt Golas	8,01,707	17,88,041	19,00,950	18,51,003	17,28,637
Kidderpore Dock ditto	1,30,787	5,57,226	5,33,667	2,44,932	3,37,195
Chandbali (private bonded salt warehouses) ...	11,300	8,680	11,700	8,000	3,103
Total ...	9,43,794	23,53,947	24,46,317	21,03,935	20,65,935

The stocks remaining in the golas at the close of the quarter were less than those of the previous three quarters, but considerably greater than those of the corresponding quarter of the previous year.

5. The figures showing the despatches of salt from Calcutta by different routes during the quarter under report will be published as usual in the *Calcutta Gazette* by the Director-General of Commercial Intelligence, when they are available.

6. The quantity of salt despatched during the quarter by the East Indian Railway to stations beyond Buxar amounted to 1,711 maunds, as against 810 maunds in the previous quarter and 1,266 maunds in the corresponding quarter of the previous year.

7. The quantity of saltpetre salt excised in the refineries of Bengal during the quarter amounted to 4,398 maunds, as compared with 8,332 maunds in the previous quarter and 3,987 maunds in the corresponding quarter of the previous year.

8. The shipments of Liverpool salt during the quarter for the port of Calcutta, according to the published market reports amounted to 37,763 tons. It is reported that the vessel S. S. *Wardenfels* is on the sea bound for Calcutta with a cargo of salt from Hamburg. The vessel will discharge part of the cargo at Rangoon, but the quantity is not yet known.

9. Table III shows the average wholesale prices* per 100 maunds of Liverpool salt and other descriptions of salt during each fortnight of the quarter.

TABLE III.

Description of Salt.	Fortnight ending 15th April 1908.	Fortnight ending 30th April 1908.	Fortnight ending 15th May 1908.	Fortnight ending 31st May 1908.	Fortnight ending 15th June 1908.	Fortnight ending 30th June 1908.
1	2	3	4	5	6	7
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
Liverpool *panga*	63 0 0	54 8 0	52 6 9	55 0 0	55 0 0	50 10 8
Hamburg *karkatch*	48 8 0	46 8 0	44 14 6	44 1 8	41 13 4	44 1 7
Bombay *karkatch*	47 0 0	47 0 0	43 8 0	42 9 4	41 13 4	44 0 0
Aden crushed	44 13 1	41 14 2	41 14 8	44 1 9	46 11 4	48 1 6
Salif ditto	40 12 9	40 0 0	39 10 8	39 4 0	39 10 8	40 0 0

The price of Liverpool *panga* was high at the beginning of the quarter, as buyers had to replenish their stocks, which had run low in anticipation of a reduction of duty. The price fell towards the end of the quarter. The prices of Hamburg *karkatch*, Bombay *karkatch* and Salif crushed fell. The average price of 100 maunds of Madras salt was Rs. 50.

10. The quantity of sea-imported salt admitted into, and cleared from, bond at the inland warehousing station of Chandbali, in the district of Balasore, during the quarter and the corresponding quarter of the previous year, is given below:—

Description of Salt.	Admitted into bond.		Cleared.	
	First quarter of 1907-1908.	First quarter of 1908-1909.	First quarter of 1907-1908.	First quarter of 1908-1909.

WEATHER AND CROP REPORT.

For the week ending the 17th August 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	0·98	7½	7	Weather showery with bright intervals. Rainfall at Kalna 2·53, Katwa 1·85 and Asansol 3·27 inches. Transplantation of paddy nearly over. Prospects of jute fair. Insect pests damaging jute and rice crops in parts of the district. Condition of sugarcane fair. Grain stocks sufficient. Fodder and water sufficient. No cattle-disease. 361 persons given gratuitous relief in the Katwa subdivision.
2	BIRBHUM ...	0·68	7	7	Weather seasonable. Rainfall at Rampur Hat 0·74 inches. Transplantation of paddy nearly finished. Fodder and water sufficient.
3	BANKURA ...	5·12	7½	7½	Weather seasonable. Transplantation of paddy finished. An insect pest doing damage to paddy in some parts of the district. Persons gratuitously relieved on the 14th August—220 men, 649 women and 207 children—total 1,076. No cattle-disease. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 6 to 7 seers a rupee in the affected tracts.
4	MIDNAPORE .	3·03	6	6	Rainfall at Contai 4·48, Tamluk 1·51 and Ghatal 2·87 inches. Transplantation nearing completion. *Aus* paddy being cut in places. Damage by insects reported in the northern thanas. Prospects of jute fair and that of maize and *til* good. Common rice selling at 7 seers a rupee at Contai, 6 seers at Tamluk and 7¾ seers at Ghatal.
5	HOOGHLY ...	0·82	6½	6½	Rainfall in the district general. Weather seasonable. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute and sugarcane fair. *Aus* and *aman* paddy being damaged by insect pests. Transplantation of *aman* paddy continuing. Cutting of jute commenced in thana Chanditola. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	1·43	6¾	6¾	Rainfall at Uluberiah 1·69 inches. Weather seasonable. Prospects of jute not good. Jute on low lands does not exist; that on high lands thriving. *Aus* paddy doing well. Fodder and water for cattle sufficient. Condition of agricultural stock fairly good. Prices of food-grains stationary both at the Sadar and Uluberiah subdivsion.
7	24-PARGANAS	3·12	6	6	Weather seasonable. Rain sufficient everywhere. Jute not favourable. Paddy damaged by insects in parts of Barasat, Basirhat and Baduria thanas and by recent heavy rain in parts of Basirhat and Diamond Harbour and in Vishnupur, Bhangor and Jaynagar thanas. Common rice selling at 6½ seers a rupee at Barasat, at 6¾ seers at Basirhat, and 7 seers at Barrackpore and Diamond Harbour.
8	NADIA ...	2·75	6⅓	6¾	Rainfall at Ranaghat 1·46, Chuadanga 2·24, Meherpur 1·28 and Kushtia 0·84 inches. More rain wanted. Prospects of *aus* paddy fair. *Aman* paddy doing well. Insect-pests reported from the Meherpur, Ranaghat and Sadar subdivisions. Prospects of jute fair. Prices of staple food-grains stationary. Stocks of food-grains insufficient. Scarcity prevalent in the Meherpur subdivision. Condition of cattle fair. Fodder and water sufficient. Persons attending 24 test-works on 12th instant—3,541 men and 26 women—total 3,567. 2,783 persons given gratuitous relief.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	0·79	7	7	Weather cloudy with occasional light showers. Rainfall at Lalbagh 0·63, Kandi 0·95 and Jangipur 0·62 inch. Transplantation of *aman* paddy going on; but somewhat retarded in Jangipur where prospects of the *bhadoi* paddy also unfavourable. Condition of jute fair. Some damage by insect pests in thana Mirjapur. No cattle-disease.
10	JESSORE ...	1·78	$7\frac{7}{16}$	$7\frac{9}{16}$	Weather seasonable. Rainfall at Jhenidah 1·21, Magura 1·20, Bangnon 2·54 and Narail 1·21 inches. Harvesting of *aus* paddy commenced. More rain very urgently wanted. Condition of jute not favourable. Stocks of food-grains being supplemented by the imports of Burma rice. Condition of agricultural stock good on the whole. Fodder and water sufficient. No cattle-disease High prices continuing. 56 persons employed on District Board test-works and 4,254 persons given gratuitous relief.
11	KHULNA ...	0·75	$8\frac{1}{2}$	$8\frac{1}{2}$	Rainfall at Bagerhât 0·63, Satkhira 1·66 inches. Prices of staple food-grain almost stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. More rain wanted. Condition of agricultural stock good. No apprehension of famine at present. Prospects of standing crops fair and of jute not favourable. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	0·40	7 $10\frac{1}{4}$*	7 10*	Weather hot and occasionally cloudy. *Bhadoi* crops suffering for want of rain without heavy downpour. Transplantation of paddy not taken in hand. Paddy seedlings withering in places. Sugarcane doing well. Prices almost stationary. Stocks of food-grains likely to be sufficient if not largely exported. No cattle-disease. Supply of fodder and water sufficient.
13	GAYA ...	0·20	8† $9\frac{3}{4}$*	$7\frac{3}{4}$† $8\frac{3}{4}$*	Weather hot, sometimes cloudy. Transplantation of paddy seedlings almost stationary for want of rain. Sugarcane and other *bhadoi* crops doing well, the latter suffering in places owing to drought. Rain very urgently wanted for standing crops. Prices almost stationary with a slight fall at Sadar. Cattle-disease continuing in some villages in the Nawadah sub-division. Fodder and water sufficient for cattle.
14	SHAHABAD ...	0·23	8† 9†	8 9*	Rainfall at Buxar 4·40, Sasaram 3·11, Bhabhua 2·12 and Dehri 3·02 inches. The condition of standing crops improved by the recent rain. Transplantation of paddy commenced except in places where rainfall is still insufficient. Prices of food-grains almost stationary. Food-stocks under normal, but sufficient if not exported. Agricultural stock normal. Fodder and water sufficient.
15	SARAN ...	0·15	$8\frac{1}{4}$ $10\frac{1}{4}$*	$8\frac{1}{4}$ $10\frac{1}{2}$*	Weather hot. Rainfall at Siwan 2·79 and Gopalganj 1·40 inches. Weeding of *bhadoi* crops and transplantation of winter rice going on. The state of standing crops good. Rain wanted. Prices of food-grains stationary. Food-stock resources external. Agricultural stock good. Cattle-disease (locally called *Dhika*) reported from one village. Fodder and water sufficient.

* The figures indicate the price of maize in seers per rupee.
† Burma rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee.* This week.	Price of common rice in seers, per rupee.* Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
16	CHAMPARAN ...	Inches.. 0·78	8 $10\frac{1}{2}$*	8 $10\frac{1}{2}$*	Rainfall at Bettiah 1·64 inches. Distribution of rainfall irregular and local. Weeding of *bhadoi* crops continuing. Transplantation of winter paddy going on, but more rain wanted. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient. Prospects of jute and sugarcane fair.
17	MUZAFFARPUR	0·69	8 $10\frac{3}{4}$*	8 $10\frac{3}{4}$*	Weather hot and occasionally cloudy. Rainfall at Sitamarhi 0·05 and Hajipur 0·17 inches. Scattered showers of varying quantity reported from various parts of the district. Transplantation of paddy continuing on very low lands. Standing crops withering in some places in the Hajipur subdivision for want of moisture. Prospects of jute good in Belsund and Pupri thanas of the Sitamarhi subdivision. Condition of agricultural stock good. Fodder and water sufficient. No cattle-disease reported. Common rice and maize selling at $7\frac{3}{4}$ and $9\frac{1}{2}$ seers a rupee respectively at Sitamarhi, and at $7\frac{3}{16}$ and $10\frac{1}{2}$ seers a rupee respectively at Hajipur. No apprehension of scarcity, but more rain urgently wanted.
18	DARBHANGA ...	1·28	$8\frac{1}{4}$ 9*	$8\frac{1}{4}$ 10*	Weather hot and at times cloudy. Rain urgently wanted. The rainfall at the Sadar subdivision local, and practically no rain in the Madhubani subdivision. Crops suffering and agricultural operations retarded everywhere for want of rain. Transplantation of rice impossible at present and *bhadoi* crops suffering from the heat. Agricultural stock sufficient. No cattle-disease. Fodder and water available. Prices very high and showing tendency to rise.
19	MONGHYR ...	1·60	7 10*	7 $9\frac{1}{2}$*	Weather hot and cloudy. Want of rain being very keenly felt. Transplantation of paddy not commenced yet. Paddy seedlings reported to be withering in places. More rain wanted for *bhadoi* crops. Fodder and water sufficient. No cattle-disease reported. Condition of agricultural stock good.
20	BHAGALPUR ...	1·36	$8\frac{3}{16}$ $10\frac{1}{8}$*	$8\frac{3}{16}$ $10\frac{1}{8}$*	Weather hot, sometimes cloudy. Rainfall at Banka 3·35, Madhipura 0·51 and Supaul 0·16 inches. Much good done by recent rain at Banka and Sadar. More rain wanted in Supaul and Madhipura, where transplantation has been stopped. *Kucha* wells being dug in some places in Madhipura to save seedlings. Prospects of jute poor in Supaul, but fair elsewhere. No cattle-disease reported. No apprehension of famine at present. Prices almost stationary in the Sadar and Banka subdivision, rising in Madhipura and Supaul.
21	PURNEA ...	0·17	7	7	Weather hot and at times cloudy. Transplantation of *aghani* paddy going on in some places in Araria and Kishanganj. At standstill at the Sadar subdivision for want of rain. Harvesting of *bhadoi* paddy commenced at Araria. Cutting of jute begun, but difficulty in steeping it for want of water. Condition of jute fair. Prospects of paddy crops unfavourable. Seedlings withered in many places. Stocks of food-grains and agricultural stock adequate. Scarcity not yet apprehended. Cattle-disease reported from Raniganj, Forbesganj and Dhamdaha thanas. Fodder and water sufficient. Common rice selling at 7 seers per rupee at Kishanganj and 8 seers at Araria.

* The figures indicate the price of maize in seers per rupee.

22	DARJEELING ...	0·20	7 10*	7 10*	Weather seasonable. Hills—Maize growing and being harvested in some places. Potatoes being harvested. *Chota marua* and *bhadoi* paddy growing and being harvested in some places. Winter rice and *bara marua* being sown. Terai—Transplantation of winter rice in progress. Prospects of jute not favourable. Other standing crops doing well. Stock of food-grains sufficient.
23	SONTHAL PARGANAS.	1·56	7 9*	$6\frac{3}{4}$ 8*	Rainfall at Deoghur 0·33, Godda 1·71, Jamtara 3·07, Pakour 1·08 and Rajmahal 0·48 inches. Rain urgently wanted in the north of the district where transplantation of paddy is retarded. Prospects of maize and jute fair. Prices of staple food-grains almost stationary. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Small loans being given to poorer cultivators. Fodder and water sufficient. Cholera and cattle-disease reported from places. Chittagong and Burmah rice being imported from Rampur Hat.
24	CUTTACK ...	5·76	$7\frac{25}{64}$	$7\frac{35}{64}$	Rainfall at Jajpur 8·44, Kendrapura 1·45 and Banki 4·07 inches. *Biali* paddy in ear and in some places ripening. *Saradh* paddy being transplanted. Sugarcane, turmeric, cotton, jute and *mandia* growing. Condition of jute crop fair. Condition of cattle generally good. Prospects of standing crops good. 693 men, 1,657 women and 3,737 children—total 6,087 on gratuitous relief. 153 men, 152 women and 354 children—total 659—attending test-works.
25	BALASORE ...	5·16	$7\frac{3}{4}$	$7\frac{1}{2}$	Rainfall at Bhadrak 0·84 inches. Weather seasonable. Puddling, transplanting and weeding of *saradh* paddy continuing. Vegetables doing well. Sugarcane and jute thriving. Prospects of jute fair. *Saradh* and *biali* paddy in some parts of Chandbali and Dhamnagore under flooded water, but damage not reported. Stocks of food-grains insufficient. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas. Fodder and water sufficient. Common rice selling at $7\frac{1}{2}$ seers a rupee at Bhadrak. 54 men, 262 women and 256 children—total 572—at Sadar, and 296 men, 1,998 women and 2,821 children—total 5,115—at Bhadrak receiving gratuitous relief. 20 men, 290 women and 118 children—total 428—attending test-work at Bhadrak.
26	ANGUL ...	...	...	6	Report not received.
27	PURI ..	3·35	$6\frac{9}{16}$	$7\frac{1}{16}$	*Biali* paddy growing well. Puddling of *saradh* continuing. Miscellaneous crops thriving. Fodder and water sufficient. 273 men, 228 women and 722 children—total 1,223—attending test-works. Recipients of gratuitous relief—men 340, women 1,224 and children 1,073—total 2,637. Piece-work attended by 66 men.

28	SAMBALPUR ...	5·46	10	9¼	Weather cloudy. Transplantation, reploughing and weeding of autumn and winter rice in progress. *At* lands under preparation for sowing of *urid* and *til* in Sambalpur. Sowing of *til* and *urid* continuing in Bargarh. Condition of standing crops—sugarcane and *gulji* good. No apprehension of famine or scarcity. Stocks of food-grain and of fodder and water supply sufficient. Rinderpest in both tahsils. Cheapest rice selling at 11¼ seers per rupee at Bargarh. Pests of crop known locally as Horuipok in few villages of the Sadar tahsil. No damage done.
29	HAZARIBAGH...	0·97	7½* 9†	7¼* 8†	Weather seasonable. Transplantation of paddy in full swing. *Bhadoi* crops doing well. ;Cattle-disease in one thana. Burma rice selling at 6 $\frac{5}{16}$ seers and coarse rice at 5¼ and *maize* 7½ and *mahua* at 11¼ seers a rupee in the interior. Persons gratuitously relieved—men 629, women 1,728 and children 1,087—total 3,444. Persons relieved on District Board works—men 49, women 7—total 56. 391 persons doing piece-works.
30	RANCHI ...	2·68	7½*	7½*	Weather rainy. Transplantation of winter rice in progress. Sowing of *sirguji*, *urid* and cotton continuing. Standing crops doing well, but *gora* paddy reported to have been slightly damaged in the Khunti subdivision by a disease locally called *tothi*. No cattle-disease. Fodder and water sufficient. Common rice selling at 6 seers a rupee. Persons attending test-works—men 210, women 229 and children 84—total 523. Persons gratuitously relieved in the undeclared area—men 43, women 242 and children 22—total 307. Persons on famine relief-works in the declared area—men 3,364, women 4,072 and children 2,638—total 10,074. Persons on gratuitous relief in the declared area—men 866, women 3,012 and children 1,744—total 5,622.
31	PALAMAU ...	2·72	7⅝	7⅝	Weather seasonable. Paddy transplantation commenced. *Bhadoi* crops doing well. Local grain stock insufficient. Condition of agricultural stock normal. Fodder and water sufficient. Some cattle-disease.
32	MANBHUM ...	4·58	8	7¼	Weather seasonable. Rainfall at Gobindpur 1·75 inches. State of standing crops good. Transplantation of winter rice nearly finished. *Til* not yet sown. Fodder and water sufficient. Cattle-disease reported from thanas Nirsha and Chirkunda. Condition of agricultural stock fair. Prices of staple food-grains practically stationary. Common rice selling at 7 seers per rupee at Dhanbaid. Stocks of food-grains adequate at present. No sign of scarcity. Demand for labour good.
33	SINGHBHUM ...	2·21	6	6	Weather cloudy. Transplantation and weeding operations continuing. State of standing crops fair. No cattle-disease. Fodder and water sufficient. Common rice selling at 6 and 7½ seers a rupee at Kharsawan and Seraikella respectively.
34	COOCH BEHAR	0·95	8 $\frac{3}{10}$	8¼	Weather hot and cloudy. Harvesting of *bitri* paddy going on. Transplantation of *haimantik* paddy retarded for want of sufficient rain. Prospects and condition of jute fair. Prices of staple food-grains almost stationary. No apprehension of scarcity or famine. Fodder and water sufficient.

* Burma rice.

Copious rain fell for 5 days. Rainfall sufficient in all States. Sowing of paddy completed in all States. Transplantation almost finished in Pal Lahera and in progress in the other States. *Bahura* operations (reploughing) continuing in Kalahandi, Bonai, Patna and Kairakhol. Puddling completed in Athgarh and in progress in Ranpur, Mayurbhanj, Athmallik and Daspalla. Weeding commenced in Keonjhar, Hindol, Khandpara, Baramba, Ranpur and Nilgiri. Cotton in Nayagarh, Talcher and Hindol; sugarcane in Talcher, Nayagarh, Narsingpur, Hindol, Keonjhar, Kalahandi, Athgarh and Patna; *gora* paddy and Indian corn in Keonjhar; *bajra*, *juar* and *arhar* in Athgarh and *gulgi* and *arhar* in Talcher and all other standing crops in good condition. Agricultural stock, fodder and water sufficient. Price of rice risen in Keonjhar from 6 to 5¼ seers; in Hindol from 7½ to 7 seers; fallen in Pal Lahera from 7 to 8 seers and stationary in other States.

* The report is for the week ending the 8th August 1908.

GENERAL SUMMARY.—The rainfall was heavy in Bankura, Cuttack, Balasore and Sambalpur, moderate in Midnapore, the 24-Parganas, Puri, Manbhum and in parts of Shahabad, Bhagalpur and the Sonthal Parganas and light in the rest of the Province. More rain is wanted in Bihar and in parts of Nadia, Jessore and Khulna. Transplantation of winter rice is being retarded in Bihar for want of rain. Paddy seedlings and *bhadoi* crops are also suffering in Patna, Gaya, Muzaffarpur, Darbhanga, Monghyr and Purnea. Damage is being done by insect-pests in Burdwan, Bankura, Midnapore, Hooghly, the 24-Parganas, Nadia and Murshidabad. Floods are reported from Balasore. Sugarcane is doing well. The condition of jute is fair except in Howrah, the 24-Parganas, Jessore, Khulna, Darjeeling and parts of Bhagalpur. The price of common rice has risen in Ranchi and Cooch Behar and fallen in Burdwan, Nadia, Gaya, the Sonthal Parganas, Puri, Sambalpur and Manbhum. It has been stationary in the remaining districts. Stocks of food-grains are insufficient in Nadia, Balasore and Palamau. The supply of fodder and water is sufficient. Cattle-disease is prevalent in Gaya, Saran, Purnea, the Sonthal Parganas, Sambalpur, Hazaribagh, Palamau and Manbhum. The number of persons gratuitously relieved was 32,258. Of these 14,411 were in Orissa. Test-works in Nadia, Jessore, Cuttack, Balasore, Puri, Hazaribagh and Ranchi were attended by 6,969 persons. The number of persons on famine relief-works in Ranchi was 10,074.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 18th August 1908.

N. N. BANERJEI,
for *Offg. Director of Agriculture, Bengal, on tour.*

N.B.—The above summary does not include figures for Angul, return from which has not yet been received.

The mean pressure, temperature, etc., are deduced from the traces of the Knudsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified. and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; <, lihgtning; K, thunderstorm.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,
ALIPORE (CALCUTTA), *the 17th August 1908.*

C. W. PEAKE,
for *Offg. Director-General of Observatories.*

SUMMARY OF THE RAINFALL OBSERVATIONS TAKEN IN BENGAL DURING THE MONTH OF JULY 1908.

DURING the month under report the distribution of rain was very irregular. It was heavy in South-West Bengal and light in Bihar. Orissa received an average fall. In Chota Nagpur the rainfall was below the normal. Hooghly received an average fall of 18·75, Howrah 22·28, 24-Parganas 17·08, Calcutta 24·64, Jessore 14·79, Khulna 17·25 and Sambalpur 24·62 inches. The excess over the normal at Hooghly was 6·73, at Howrah 10·75, at the 24-Parganas 4·10, at Calcutta 12·33, at Jessore and Khulna 4·15 and at Sambalpur 6·25 inches. Expressed in percentage figures the above districts received 156, 193, 132, 200, 139, 132, 134 per cent. of rain. In Burdwan, Birbhum, Bankura, Midnapore, Nadia, Murshidabad, Angul, Cuttack, Ranchi and Manbhum rain was also above the normal. The percentage figures are 116, 122, 116, 121, 118, 103, 103, 101, 104, 106. In Bihar and in Balasore, Puri, Hazaribagh, Palamau, Singhbhum the fall was below the normal. The deficiency was noticed in the districts of Bihar and in Balasore and Palamau.

From the Divisional percentage table attached it will be seen that South-West Bengal received 123 per cent., Bihar 59 per cent., Orissa 108 per cent. and Chota Nagpur 87 per cent. of rain.

The total rainfall from January to July was 111 per cent. in South-West Bengal, 60 per cent. in Bihar, 78 per cent. in Orissa and 84 per cent. in Chota Nagpur.

The following table gives the rainfall of the various divisions of Bengal in July and in each of the previous months of the present year as compared with the normal values for the same periods. The figures given represent the actual falls expressed as percentage of the normal falls:—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	July.	Actual rainfall of first seven months of 1908 expressed as a percentage of the normal fall for the period.

PRELIMINARY FORECAST OF THE SUGARCANE CROP OF BENGAL, 1908.

THE following note is published for general information.

F. W. DUKE,
Offg. Chief Secy. to the Govt. of Bengal.

The 19th August 1908.

DEPARTMENT OF AGRICULTURE, BENGAL.

(*Preliminary Fore cast of the Sugarcane Crop of Bengal, 1908.*)

(On an average of the five years ending 1906-07, the area under sugarcane in the territory to which this forecast relates has represented some 18·8 per cent. of the total area under this crop in British India.)

Character of the Season.—Planting of the crop was late in the Burdwan and Presidency Divisions owing to short rainfall in the beginning of the season. In the rest of the Province it was normal. Deficient rain affected the growth of the crop in several districts in the early part of the

season, but recent rain has improved prospects somewhat. The present condition of the crop is fair except in parts of the Presidency Division and of the Burdwan, Bankura, Saran, Purnea, Manbhum and Singhbhum districts.

Area planted.—The area under sugarcane this year is returned as 382,800 acres, against 436,200 acres returned last year. The normal acreage is estimated at 439,300 acres. The decrease in cultivation this year is due to deficient rain at the time of planting.

Outturn.—From District reports annexed to this note, it will be seen that only three districts. viz., Balasore, Ranchi and Palamau expect a normal crop. Two districts, viz., Shahabad and Darbhanga give estimates of 90 and 91 per cent. crops respectively. Ten districts report crops between 80 and 89 per cent., 8 districts between 70 and 79 per cent., and six districts between 60 and 69 per cent. The estimates for the remaining four districts, viz., Jessore and Saran (each 55 per cent.), Singhbum (50 per cent.) and Murshidabad (48 per cent.) are poor. According to these estimates, the total outturn of the crop for the Province amounts to 78 per cent. of the normal, against 85 per cent. estimated for last year. But as the recent rains have improved prospects in several districts, it is anticipated that the outturn of the crop of this season will not fall below that estimated by this Department last year.

Other sources of Gur.—The manufacture of raw sugar from the date palm is confined to the Presidency Division. The quantity of this product likely to be obtained this year is estimated at 1,597,149 cwts. and the output of sugar from the palmyra-palm is estimated at 22,962 cwts.

N. N. BANERJEI,

CALCUTTA, } for *Offg. Director of Agriculture,*
The 10th August 1908. } *Bengal, on tour.*

Preliminary Forecast of the Sugarcane Crop of 1908.

Division.	District.	Total area of the district, in acres.	Total area estimated to be under cultivation, in acres	Approximate normal area under sugarcane, in acres.	Approximate area under sugarcane last year (1907), in acres.	Estimated area under sugarcane this year (1908), in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)?	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the planting of the crop was begun this year.	Remarks by District Officers.	Remarks by the Department of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
									Acres.		Acres.			
Burdwan ...	Burdwan ...	1,721,920	1,284,200	25,800	24,500	22,900	77	68	58,749	1889 to 1892 and 1903-04 to 1906-07.	608	Middle of March to Middle of May.	The decrease in the acreage is due to want of moisture at the time of planting, which was late in some parts of the district. The general condition of the crop is not very good and hence a low outturn is expected.	
	Birbhum ...	1,121,280	776,300	9,000	8,900	6,900	60	75	45,571	1899 to 1891 and 1906.	164	Last week of May and 1st week of June	The date of sowing was very late this year owing to want of rain and to the general water scarcity in the district. The present condition of the crop appears to be fair, but as the date of sowing was very late, the out turn is expected to be 75 per cent. only.	
	Bankura ...	1,677,440	648,800	15,000	13,000	12,000	50	60	14,879	1889 to 1902 and 1906.	...	11th May	The decrease in area is due to the cessation of rain during the planting season. The general condition of the crop is not good, as the heavy rain in June has considerably damaged the growth of the plants. Hence a low outturn is expected. The date of planting was late this year.	

Division.	District.	Total area of the district, in acres.	Total area estimated to be under cultivation, in acres.	Approximate normal area under sugarcane, in acres.	Approximate area under sugarcane last year (1907), in acres.	Estimated area under sugarcane this year (1908), in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)?	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the planting of the crop was begun this year.	Remarks by District Officers.	Remarks by the Department of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
									Acres.		Acres.			
Burdwan—concld.	Midnapore ..	3,319,040	2,180,600	20,300	17,300	16,900	57	70	33,343	1893 to 1898.	372	Last week of March to latter part of April.	There was very little rain at the proper time for planting which was late in Contai and Ghatal. The recent rain has improved conditions to a certain extent.	
	Hooghly ...	761,210	445,900	7,200	7,000	6,700	80	85	Not cadastrally surveyed.			Middle of February.	Just after the planting of the crop there was no rain, so the young plants did not thrive well. Hence a normal crop is not expected.	
	Howrah ...	326,400	250,600	8,500	8,300	8,000	97	73	...	...	...	March	The decrease in the area planted was due to want of rain in the beginning. The condition of the crop is fair. The recent rain has improved the prospects of the crop. The date of planting was late this year for want of rain	
	24-Parganas..	3,100,533	1,079,700	5,100	4,600	3,300	73	68	...	...	...	Between December and April.	The decrease in the area as well as in the outturn is ascribed to the want of favourable weather and rain at the time of sowing and the total absence of the rainfall thereafter. The weather and general condition of the crop are not good. The date of planting was late everywhere in the district except in Basirhat, where it was normal. The normal area has been revised.	

Presidency ...	Nadia ...	1,787,320	1,043,800	11,400	7,900	6,300	54	64	Not cadastrally surveyed			February ...	The decrease in the area sown and in the estimated outturn is due to want of seasonable rain. The date of planting was late in most places.
	Murshidabad	1,871,520	968,500	14,700	11,300	3,000	50	48	...	...	...	October 1907 to June 1908.	The weather was not favourable. The general condition of the crop is poor for want of timely rain. The recent copious showers may yet do some good and improve prospects. The date of planting was late.
	Jessore ...	1,872,153	1,191,000	15,000	9,300	3,100	57	55	...	...	...	February to March.	The decrease in the area and outturn is attributed to want of rain at the time of planting. The date of planting was late.
	Khulna ...	3,049,016	870,000	1,500	1,280	1,200	100	75	85,582	1893 to 1905.	..	15th Feb.	The weather being unfavourable, the general condition of the crop is not good. The planting was late this year. For want of timely rain, the outturn is estimated to be 75 per cent. only.
Patna ...	Patna ...	1,328,000	1,082,100	20,200	19,900	18,700	74	83	73,164	1900 to 1901.	296	From middle of January.	The weather has been favourable and the general condition of the crop has been fair. The planting this year was done at the normal time.
	Gaya ...	3,015,680	2,118,100	38,100	38,400	38,400	85	85	514,592	1893 to 1895 and 1900 to 1902.	6,530	First week of January.	Insufficient rain in May and June slightly affected the prospects of the crop, otherwise the weather was favourable. The general condition of the crop is good. The date of planting was normal. The estimate of some thana officers in the Sadar subdivision as regards the area under the crop this year is low, but there appears to be no reason to account for the decrease in the area and the normal figures have therefore been adopted.

Division.	District.	Total area of the district, in acres.	Total area estimated to be under cultivation, in acres.	Approximate normal area under sugarcane, in acres.	Approximate area under sugarcane last year (1907), in acres.	Estimated area under sugarcane this year (1908), in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)?	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under the crop during the cadastral survey.	Date at which the planting of the crop was begun this year.	Remarks by District Officers.	Remarks by the Department of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
									Acres.		Acres.			
Patna—concld.	Shahabad ...	2,800,643	1,542,600	45,900	45,900	40,000	62	90	..	...	..	15th March	Owing to drought at the beginning of the season there has been a decrease in the area planted, but the crop is doing fairly well up to date. The date of planting was normal.	
	Saran ...	1,711,286	1,387,200	36,800	44,700	38,900	68	85	1,711,286	1893 to 1901.	86,500	October 1907 to Middle of January 1908.	The date of planting was normal. In the beginning, want of moisture damaged the crop. The general condition of the crop is not promising.	
	Champaran ...	2,289,840	1,447,600	10,800	15,500	13,000	81	63	2,079,815	1892 and 1893 and 1895 to 1896.	11,155	Beginning of February.	The decrease in the area and outturn is due to want of rain and to want of moisture in the soil. Sugar is not produced from the date palm or from other sources in this district. The date of sowing was normal.	
	Muzaffarpur ...	1,942,400	1,627,600	8,800	11,800	11,000	78	85	1,941,254	1891 and 1892 and 1899 and 1900.	8,765	November 1907 onward.	The weather was favourable and the general condition of the crop is good at present. The date of planting was normal.	
	Darbhanga ...	2,142,680	1,678,000	17,000	20,000	19,600	96	91	2,142,680	1896 to 1903.	17,000	December, January and February.	The weather was favourable and the general condition of the crop is good. The date of planting was normal.	

Bhagalpur ...	Monghyr ...	2,310,080	1,882,900	6,800	7,000	7,000	70	78	...	...	...	February	The crops suffered owing to want of timely rain.
	Bhagalpur ...	2,704,640	2,073,300	29,000	29,600	29,000	81	89	1,214,080	1902 to 1904.	3,700	Middle of February	The weather has hitherto been favourable and the general condition of the crop is satisfactory. The planting was normal on the whole.
	Purnea ...	3,196,153	1,694,400	12,400	11,400	11,900	65	87	2,606,346	1901-1903 and 1905-1906.	277	March	The weather is at present unfavourable on account of drought. The date of planting was normal.
	Darjeeling ...	744,980	160,800	1,200	1,300	1,100	75	60	200,519	1897-1898 and 1901-1902.	...	March	No sugar is produced from the date palm or any other sources.
	Sonthal Parganas.	3,200,860	1,545,300	13,400	13,800	13,800	98	80	2,756,180	1889 to 1903.	11,327	Middle of January	The outturn is expected to be below the normal owing to want of timely rain. Recent rains have however improved prospects to some extent. The date of planting was normal.
Orissa ...	Cuttack ...	2,232,560	1,225,500	3,300	2,400	2,200	81	86	2,089,437	1888 to 1895 and 1901.	1,909	Between 5th February and 18th April.	The weather is favourable. The general condition of the crop is good. The date of planting was normal. The decrease in the area sown is due to the absence of rain at the time of planting.
	Balasore ...	1,334,368	932,200	2,000	2,100	2,100	100	100	1,095,778	1891-1892 to 1894-1895.	471	March to April.	The weather was favourable and the condition of the crop is good. The date of planting was normal.
	Angul ...	1,075,840	260,000	2,300	2,300	2,300	75	77	The Sadar subdivision of Angul was cadastrally surveyed in [illegible]. The area under each crop was not separately shown.			End of February.	The crop suffered for want of rain in March, April and May. The planting was normal this year.
	Puri ...	1,809,360	750,800	3,100	2,700	2,400	81	87	1,274,790	1888-1889.	612	April	The general condition of the crop is good.
	Sambalpur ...	2,433,280	845,300	3,700	6,000	3,700	83	75	2,433,280	1884 to 1887 and 1891 to 1897.	6,460	1st March	The area in Column 6 was only an estimate last year, but now the actual area has been given after due checking. The date of planting this year was normal. The decrease in area is due to want of water in the tanks and [illegible], the water having been used up in irrigating rice fields last October. The condition of the crop is fair. The weather was favourable in the beginning, but the crop suffered from drought and from the hot weather.

Division.	District.	Total area of the district, in acres.	Total area estimated to be under cultivation, in acres.	Approximate normal area under sugarcane, in acres.	Approximate area under sugarcane, last year (1907), in acres.	Estimated area under sugarcane this year (1908), in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)? TECHNICAL AND INDUSTRIAL EDUCATION IN BENGAL.

NOTIFICATION.

No. 3892.—The 19th August 1908.—The following papers are published for general information.

H. C. STREATFEILD,
Offg. Secy. to the Govt. of Bengal.

TECHNICAL AND INDUSTRIAL INSTRUCTION IN BENGAL, 1888-1908.

(PART I OF SPECIAL REPORT.)

CHAPTER I.

SUMMARY OF THE DISCUSSIONS AND PROPOSALS OF THE PAST TWENTY YEARS.

SECTION I.—THE GENESIS AND RESULTS OF MR. COLLIN'S REPORT OF 1890.

Explanation of terms used.

IN opening the Finsbury Technical College in 1883, Sir Philip Magnus said that in all discussions about technical education it was customary to commence with a definition. He called that education, training or instruction "technical" which had a direct reference to the career of the person who received it; but explained how in practice the term had the narrow signification, which applied to the training of the engineer or chemist rather than to that of the surgeon or lawyer. In England by 1897, technical education became practically any course of study prescribed by the Science and Art Department, while in Germany it has been described as the study of the principles underlying every kind of human craftsmanship. In India Lord Curzon in 1901 explained that he interpreted technical education as meaning that practical instruction which would qualify a person for the practice of some handicraft, industry or profession. He excluded research, the commercial revival of industries and manual training as a part of general education. The Simla Educational Conference held in 1901 defined technical education as (*a*) the study of the scientific methods and principles underlying the practice of any handicraft, industry or profession; (*b*) the application of those methods and principles to the practice of the handicraft, industry or profession. Mr. Nathan in his Review of the Progress of Education in India, 1898-1902, discussed the subject under the title, "Professional and Technical Education"; and this distinction is continued by Mr. Hornell in his Review of Education in Bengal from 1902 to 1907. The Simla Conference used the word 'technical' in its broadest sense: Mr. Nathan clearly gave to it the restricted significance which is ordinarily assigned to the word. Mr. Collin in his report of 1890 on the Arts and Industries of Bengal pointed out the vagueness attached to the term. In the present review, technical instruction must be taken to mean that special training for imparting skill, through the knowledge of principles, in any of the careers mentioned. Industrial education again is a branch of Technical Education, as exhaustively described by the Simla Conference; but is to be taken as concerned with the imparting of skill from practice in some handicraft. In other words technical instruction is the instruction necessary for the foreman or the manager, the employer or the director; while industrial education is that which is necessary for the artisan. Expressed in this form, the term technical education should not leave its meaning open to misconception. The Commissioner of Labour to the American Government in his Report of 1902 on Trade Education and Technical Education in various countries assigned to the term "technical education," a meaning, restricted both as to the career involved and as to the nature of the training: it was to give to the workman an understanding of the scientific principles involved in his work. By "trade education," the American report meant the instruction, mainly in the workshop, which consists in perfecting the pupil in the practice of the manipulations and operations of skilled workmen in particular trades. This is synonymous with industrial education as accepted in official correspondence in India.

The pronouncement of 1888 on Technical Education.

In 1886 the Government of India pointed out that little progress of a substantial character had been made in promoting technical education. It was in that year that Mr. (later Sir Antony, now Lord) MacDonnell prepared a memorandum on Technical Education in India. From that we learn that the only promising institution in Bengal beyond the Survey schools was an Industrial School in Midnapore district; that Industrial schools in Bengal were merely excrescences on the educational system with neither plan nor object; and that from isolated schools no general good was likely to come. Hence it was laid down that all such schools should be subordinate to a Central Institution. The difficulty about teachers was indicated. In 1888 an important pronouncement on the subject of technical education was made by the Government of India. The Resolution which was issued in that year recommended the institution of schools at places where industries were centralised, and in large towns where there would be a demand for superior skill. For each province an industrial survey was suggested; also the appointment of a standing committee of educational experts and professional men; and the possibility of the erection of Technological Institutes and of the enlargement of Provincial Schools of Art was foreshadowed. In Bengal we shall find that an industrial survey was made; that the scope of the Sibpur College and of the Government School of Art has been considerably enlarged, and that practical steps have been taken towards the institution of a Technological Institute; but that the increase in the number and quality of the industrial schools has been slight. This is no more than was anticipated in 1888.

The Bengal Industrial Survey of 1890.

To Mr. Collin, I.C.S., was entrusted the preparation of an industrial survey; and his Report on the existing Arts and Industries in Bengal was prepared at the end of 1890. The second portion of the Report dealt with the subject of Technical Education. He emphasized the point that there cannot be uniformity; that each locality should adopt a system specially suited to its wants; and that it is useless to imitate European systems except at a distance. The chief proposals made in connection with technical and industrial training, as distinguished from the improvement of industries, were summed up as follows:—

(1) The institution of a school for mining students in connection with the coal mining industry.

(2) The training of mechanical engineers by the introduction of apprentices into the workshops connected with State Railways.

(3) The provision of special training for apprentices and intelligent workmen in the Railway and Canal workshops in Calcutta and the suburbs.

(4) The institution of improved industrial schools and the encouragement of industrial classes.

(5) The appointment of an Inspector to supervise industrial education.

(6) Private firms and Municipalities and District Boards should be encouraged to open technical schools.

Its results as regards Technical Education.

It will be found that the Government have done a full share in promoting mining instruction; that there is now a system of apprenticeships in all the large Railway workshops (Kanchrapara, Jamalpur, Kharagpur); that full use has however not been made of the large workshops belonging to the State for the training of artisans; that the opening of technical and industrial schools has been encouraged, but that more might be done, though one of the obstacles has been the attitude of the middle classes themselves to manual labour, and another has been the difficulty of obtaining efficient teachers; and finally that while the appointment of an Inspector of Industrial Schools has not yet been made, it is now even more necessary than it was before, but that the Bengal Government have not yet been able to obtain sanction for the appointment, though such an appointment exists in the Bombay and Madras Presidencies.

It is unfortunate that the Report of Mr. Collin was not formally published. The circle of consultants was an official one, and the result is that the very existence of such a report of which practically all the recommendations still hold good is in danger of being forgotten. Five years after its preparation I was informed, when I asked for a copy, that it was confidential. When a question was asked in the Bengal Council in August 1906, regarding an industrial survey of the province, the existence of Mr. Collin's Report of 1890 was formally brought to notice.

In due course the proposals of Mr. Collin were considered in detail. As regards his proposal to utilise the municipal workshops in Calcutta for a technical school, it was found not conveniently practicable. Sir Alfred Croft, the Director of Public Instruction, considered that the District Boards would devote themselves to the establishment of industrial schools as soon as the demand declared itself. Sir Alfred Croft, as will appear from the context, was thinking primarily of the improvement of the artisan, by teaching him improved manual skill and the use of machine tools and by developing his intelligence. The District Boards have however taken up the training of the youths of the middle class who wish to become sub-overseers rather than the training of the artisans. Colonel McNeill, R.E., Secretary to the Government in the Public Works Department, pressed home the point that in order to train youths as mechanics it is essential that they should be where real work has to be done on a commercial basis; and that such youths will never learn in workshops established simply for educational purposes. This is why the existing Industrial School of the East Indian Railway colliery estate at Beniadih is more sound than the Government Industrial School at Ranchi; and why the youths trained in Sibpur have hitherto not won a reputation as mechanical engineers. It is also a strong argument why more use should be made of existing State workshops. Mr. Fouracres who was in charge in 1873 of the Canal Workshops recognised this, and at Dehri-on-Sone created a living industrial school for the children of his workmen which, it is to be regretted, was not kept up on the original lines. Another criticism of Mr. Collin's report, as regards the proposals for training in mining engineering, was that mining engineering was a new thing with a strong element of uncertainty about it. But it is precisely in this direction that Mr. Collin's proposals have borne most fruit. The course of instruction in mining which is now being given both at Sibpur and in the coal districts is much appreciated: expert instructors have been recruited: a Mining Advisory Board has been constituted: certificates of competency in mining engineering are being granted; and for three years the State Technical Scholarships in Bengal have been given in the subject of mining, while the Bengal Chamber of Commerce have recommended in 1908 that this selection should continue in preference to any other industry. Under this head of Technical Instruction it may be said with justification that Government have anticipated the requirements of the industry. During the last twenty years the annual output of the collieries in Bengal has risen from under two million tons to over ten million tons. At the end of 1907 there were over eighty companies with an ordinary capital of over four crores of rupees.

Views of the Bengal Government of 1891.

The report of Mr. Collin was itself reviewed by the Bengal Government of Sir Charles Elliott in 1891. It was determined to push on the training of mining assistants; to establish a boarding-house for the training of apprentices in Mechanical Engineering at Kanchrapara; and to establish a school for cotton-weaving at Berhampore. But it was laid down that the advancement of technical education was not a matter which could be pressed regardless of the demand or of economy. It was expected that when Sibpur College had attained its true position as the centre of industrial education in Bengal, it would be of the greatest service to local technical schools, by supplying them with trained teachers, and by receiving the most promising pupils of such schools; and it was to the maintenance of the Sibpur College, together with the Calcutta School of Art, in the highest scale of efficiency and to development on various, if then unforeseen, lines that the Lieutenant-Governor looked for the promotion of technical education. This then has been the policy of the Bengal Government and the history of the Sibpur College will show that it was kept in view. With reference to these orders of 1891, it may be stated here in anticipation of the exact sequence of narration that as regards Sibpur College provision was made in 1896 for a course in electrical engineering, and in 1906 for instruction in mining engineering, as mentioned above, and that, as regards the School of Art, it was reorganized in 1896, and in 1904 steps were taken to revive Eastern ideals in the teaching at the School; that drawing has been introduced into both primary and secondary schools and in training schools, while it has been made a compulsory subject in the latter, and that the provision of teaching in drawing is an essential condition for any grant-in-aid to the other schools including primary schools since 1901; that in 1904 a committee appointed by the Bengal Government recommended the

The policy prescribed for Bengal.

institution of a central weaving Institute at Serampore (instead of at Berhampore), the appointments for which have been sanctioned by the Secretary of State in 1907; and that in 1908 an apprentice home is being built for the accommodation of the European and Eurasian apprentices at the Kanchrapara State Railway workshops.

The necessity for instruction in drawing.

The position in 1892 was reviewed in Chapter VIII of the Quinquennial Review, 1888-1892, of the Progress of Education in India, prepared by Mr. A. M. Nash. It was considered at that time that it would take half a century to supply from the Calcutta School of Art sufficient teachers for the existing high schools in order to carry out the orders of 1891 regarding the teaching of drawing. But this forecast has been fortunately falsified in the event, as the teachers have been obtained from the training schools. Drawing was made by the Calcutta University an optional subject for the Entrance Examination in 1890; the results however were most discouraging. It had been one of the chief recommendations of Mr. A. P. MacDonnell that instruction in drawing, as a preparation for technical education, should be made compulsory in all schools the teachers of which were competent to instruct in drawing. As regards technical education proper, Mr. Nash wrote that no general scheme had been drawn up for Bengal, and recapitulated the heads of Mr. Collin's proposals.

Affiliation of minor institutions to Sibpur.

After 1892, the first step of importance which was taken was the affiliation in 1894-95 to Sibpur College of the Survey Schools of Dacca, Cuttack and Patna, which had been established in 1876. This act of affiliation was in accordance with the principle laid down in the Memorandum of 1886. The chief obstacle to the advance of technical education had been the want of a governing principle; all progress had been fragmentary and isolated. This was the complaint of Mr. Tawney, who was then the Director of Public Instruction in Bengal. It was laid down that the lower course in a comprehensive system should not only serve its own purpose, but lead to a more complete course elsewhere. Of the affiliated schools the Survey School at Patna was raised in 1896 to the status of a School of Engineering by amalgamation with the Industrial School for Bihar started in Patna in 1892. Under the title of the "Bihar School of Engineering," it teaches now up to the Overseer course. The Survey School in Cuttack still trains only for the survey examination; but at the present time (1908) it is proposed to raise it also to the level of the others under the name of the "Orissa School of Engineering."

Sibpur Artisan Department.

In 1893 the artisan department was reopened at Sibpur; but this has never been a successful department. It is self-evident, and the remark frequently occurs in the literature on the subject, that the practical instruction of the artisan can only be carried on in a commercial atmosphere; and though many improvements in the Sibpur workshops have since been made, they can never take the place of a workshop run on commercial lines, even if the difficulties of residence for artisans at Sibpur were overcome. The attendance of artisans was 35 in 1902, 27 in 1906 and 15 in 1907.

The Review of 1897.

The progress of technical education in Bengal up to 1896 is summarised in paragraph 195 of Mr. J. S. Cotton's Quinquennial Review of the Progress of Education in India, 1893–1897, published in 1898. By that date, Mr. Cotton wrote, no appearance of a system of Technical Education was to be found anywhere in India; the scheme which existed in Madras was rather a scheme of technical examinations, not of technical instruction. It is unnecessary in this review to consider in detail the direction on more practical lines of the general course of study in ordinary schools: only the training in special institutions will be considered. At Sibpur in Bengal considerable improvements had been made in providing instruction in photography and in electrical engineering. The students however found great difficulties in meeting the Calcutta University tests in engineering. The Calcutta School of Art was brought to its present site in Chowringhee in 1893 and was thoroughly re-organised in 1896. The study of design which had been ignored was taken up in a systematic course for draftsmen, drawing masters, industrial art workmen and designers, and the defect was brought to light that oriental art was more or less ignored, whereby Indian Art students were being led in the wrong direction. The prospects of the students of the Survey schools were improved by giving them openings in Government service: it was

found that in private service they found abundant employment at remunerative rates. In the matter of Industrial schools, Government contributed Rs. 6,325 and Local Funds Rs 13,229 out of a total expenditure of nearly half a lakh spread over 23 schools with 623 pupils,—a small enough total for a province with a population of 75 millions. Steps were taken to prepare for the affiliation of suitable schools to the Central College at Sibpur. The Burdwan School was linked up in 1895. The local pupils could thus study for the first two years at the local school, and then proceed to Sibpur to compete for the sub-overseership test on the same terms as those who had read at Sibpur. The only Government Industrial School was at Ranchi, where carpentry, blacksmiths' work, cane work, carriage building, besides a little reading, arithmetic, writing and free-hand drawing were taught. The difficulty of persuading ex-pupils to be teachers in the Primary Fund Industrial Schools in Chota Nagpur was the subject of remark, and this difficulty still exists. As regards Industrial Schools throughout the Province, it must not be forgotten that the most of them and some of the most successful are those under the charge of missionary agencies.

The attempt through a bifurcation of studies to prepare for a technical education.

In 1898 Mr. Hill, Inspector of Schools, proposed that technical classes should be opened at the Government district schools; and in 1899 a scheme was prepared by Mr. Slater, who was then Principal of the Civil Engineering College at Sibpur. This led to a consideration of what, in view of the poor results obtained in Bengal, is rather grandiloquently styled the Bifurcation of Studies in accordance with the recommendation of the Education Commission of 1883. In 1900 it was determined that classes be opened at Ranchi, Bankipore and Midnapore and also at Comilla, Mymensingh, Rangpur, Barisal and Pabna of the present Eastern Province for instruction in such technical subjects as are required in the training of sub-overseers. Pupils who were ready to enter the second class of High Schools might decide whether they would continue their studies for the University Entrance Examination, or in the "modern side" classes. Two years' local training was to be equivalent to one year at Sibpur, and was to entitle the pupils to join either the Sub-overseer classes of the Technical Schools or the second-year apprentice class at Sibpur. The subjects were English, Mathematics, Drawing and Practical Geometry, Mensuration, Elementary Engineering, Surveying and Manual training. These B classes, as they were called, were started in 1901 with great hopes: other classes styled C classes with a syllabus for Commercial and Industrial training were to be opened in 1903. It was anticipated that there would be a great future for this scheme; but it is no exaggeration to say that in both cases the result has been a failure, and that in the former the parents and guardians of pupils have played at cross purposes with the views of Government. My own observation agrees with what I have found on record. It was hoped that public opinion was awakening to the recognition of the fact that a literary education was not the best training for the battle of life, and that industrial and commercial activity was necessary. Whatever other factors have come into play, as regards the B classes, there is no real "election" to join the modern side. A dull boy who cannot hope to pass the Entrance examination is placed in these classes in the hope that he may squeeze into Sibpur without the full general education which Sibpur demands from direct entrants. The result is good neither for the boy nor for Sibpur. The only hopeful feature is, as stated by Mr. Heaton, the successor to Mr. Slater, in a review written in 1906, that modern classes in other countries have had the same history, and it is a mere question of waiting for the breaking down of the natural apathy.

The Review of 1902.

The position of technical and industrial education in Bengal was again reviewed in Chapter VIII of Mr. Nathan's Quinquennial Review of the Progress of Education in India up to 1902, published in 1904. By this time it could be said that Sibpur College had well equipped laboratories and workshops and a large staff of European professors. The beginning of practical instruction in mining engineering had been made by sending B. E. students with scholarships for two years to a selected mine. The Calcutta School of Art after its reorganization in 1896 had special classes for engineering and mechanical drawing, wood engraving, lithography and modelling. In its second division, which corresponds to the syllabus of a School of Art in

England, it had classes for those who wished to become painters or sculptors. Paragraphs 861 to 868 of Mr. Nathan's Review are of interest with reference to Industrial schools proper. The difficulties encountered by industrial schools are thus explained:—"It may be admitted at the outset that the endeavours made up to the end of the quinquennium under review to provide through State agency or under State control a system of technical education better than routine training of the bazar have met with little success. The subject which has taxed the ingenuity of the educationalists of all countries, presents a specially difficult problem in India. For the organized industries the conditions are not dissimilar from those which prevail in Europe; but for the industries which are prosecuted on a small scale by the majority of the industrial population they are much more complex and difficult." Mr. Nathan pointed out that there was one class of school which aimed at raising the intelligence and increasing the manual skill of the artisan, and another class which simply trained up boys to earn a livelihood. In Bengal, besides the artisan classes at Sibpur College and the Government school at Ranchi, there were artisan classes at the technical schools at Burdwan and Midnapore: also sixteen aided and three unaided schools. The subjects of instruction were almost entirely carpentry or blacksmiths' work or both; and the teaching in most instances was little better than that of the bazar. Most important of all, he pointed out that Bengal in common with the rest of India had little co-ordination between the instruction in the industrial schools and the local industries of the province.

SECTION II.—THE PROPOSALS IN BENGAL SUBSEQUENT TO THE SIMLA CONFERENCE OF 1901.

The Appointment of a Committee on Industrial Education.

From this stage in 1901 starts a cycle of enquiry, discussion, detailed investigation, and resolution by the Government of India on the subject of technical education; and it is useful to summarise the principles evolved for application to Bengal. The general enquiry by Sir Edward Buck in practical and technical education, the resolutions on technical education at the Simla Educational Conference, the instructions of the Government of India, the enquiries and recommendations of the committee on industrial schools in India, and the resolution of the Imperial Government on the committee's report all follow each other in close succession from 1901 to 1904. These State papers should be examined in original by those who are interested in the subject; but it is useful to place on record what bed-rock principles for application to the Bengal province can be evolved from this voluminous, suggestive, but comparatively infructuous literature. Sir Edward Buck's report of 1901 shows that technical education as applied to industries should be under a separate executive department in each province; and what is required is a special trade school for a particular industry in the locality where a trade is carried on, and only those should be taught who are likely to follow the trade. Part II, chapter III of the report is full of immaculate common sense. The Simla conference of 1901 pointed out that technical instruction should have a definite object and should be specialized. The letter of the Government of India of the 20th November 1901 considered that, while much had been done and was being done and should continue to be done for higher technical education, yet the development of industrial schools was a matter of supreme importance and instruction in such schools should be dissociated from ordinary literary education. The Committee on Industrial Schools strongly maintained in their report of 1903 that a system of apprenticeship in workshops be relied on for training artisans in preference to a system of class instruction in schools. From the point of view of the Bengal province, it is unfortunate that the committee did not make any local enquiries in the Bengal province except in Calcutta itself. The recommendations of the committee were condemned by the Government of India in their resolution of 14th January 1904 on the report of the committee, because it was believed that the central recommendation of the committee,—industrial instruction on the model of the Casanova Boy Artisan School at Naples,—would have as its end the abolition of industrial schools and the substitution of supervision in workshops. It should, however, be remembered that at

any rate as far as Bengal is concerned, the most effective improvement of the artisans in mechanical engineering has been by a system of apprenticeship either expressed or implied in large workshops. The Government of India, while admitting the great difficulty of building up rapidly an enormous fabric of technical education in India, lay down two broad principles. One is that at great industrial centres it should be possible to have whole-time schools for instruction in both workshop practice and theory; and that the active co-operation of employers of labour should be enlisted. The other is that for local handicrafts half-time industrial schools should be started,—for teaching on the one hand through the agency of an approved artisan accuracy of workmanship so as to develop a boy's inherited skill, and on the other hand, for teaching in a primary school such general education as will enlarge his prospects as a craftsman while preventing him from falling into a clerical groove. It may here be stated in anticipation that, as far as Bengal is concerned, a type of the former institution is to be found in the Bengal Technical Institute, which was started in Calcutta in the first outburst of enthusiasm for the *svadeshi* movement as an answer to the partition of Bengal, but which has been kept on proper lines by the level-headedness of its principal engineering adviser; and a type of the latter in the more successful of the village artisan schools started in Hazaribagh district by the Deputy Commissioner Mr. Radice, who was one of the members of the Industrial Committee. The great difficulty in both cases is the supply of competent teachers.

The views of the Imperial Government on the Committee's Report.

One other dictum of the Imperial Government remains to be recorded, especially as it is quoted in later papers in rather a loose fashion. It is frequently broadly laid down that Government should not enter into any industry on a commercial scale. In the first place, Government in India is in fact a manufacturer on a commercial scale of tents and harness, of great coats and blankets, of steam-launches and railway carriages; the justification is the economy which benefits the general tax-payer. In the second place as regards the prohibition in question, the dictum is qualified. While maintaining that industrial schools should be primarily educational and agreeing that the industrial schools as at present conducted frequently fail to train their pupils up to the standard of manual skill required for the market and pursue impractical methods, the resolution proceeds as follows:—

Educational *versus* Commercial Methods.

"It is most wholesome therefore that they (the schools) should be brought to the test of producing saleable articles. But this is a very different thing from requiring progressive and methodical industrial training to be sacrificed to the necessity of showing a profit on the work done by the boys and in so far as the two objects are incompatible with one another, the Government of India desire to give precedence to the former."

This qualification should not be overlooked. We may now return to the discussions in Bengal itself from the year 1901 onwards.

The proposals of the Bengal Director of Public Instruction.

On receipt of the letter of 20th November 1901 from the Government of India Mr. (now Sir Alexander) Pedler, the Director of Public Instruction, Bengal, was asked to prepare a scheme of industrial education in Bengal. Mr. Pedler, writing in January 1902 advocated cautious and tentative steps; and suggested in the first instance the establishment of craft schools at Serampore for weaving and at ten other places in Bengal for other selected crafts. For these schools the most competent local workman, foreman or master was to be selected as an instructor, and instruction in drawing and designing was to be imparted to the artisan pupils. In the second place, Mr. Pedler advocated the importation from Europe of experts for research and enquiry. Nearly two years later at the end of 1903, Mr. Pedler, on the receipt of the views of the Government of India concerning the report of the committee on industrial education, gave his views on the proposed policy for Bengal. They were as follows:—(1) class instruction should be continued; (2) geometrical drawing and designing should be taught; (3) industrial education should be on caste lines; (4) Government, local bodies and the public should help in providing scholarships; (5) in Bengal, a beginning should be made with one of the industries recommended in the letter of 1902, preferably weaving, and preferably weaving in silk, and preferably weaving in silk at Rampur Boalia in Rajshahi district;

(6) the apprentice system should be also encouraged; and (7) if a beginning be made at Rampur Boalia, other weaving schools might be established at Berhampore and in Serampore.

The scheme for a Weaving School at Serampore.

It is convenient to continue the narrative under this head, namely, the proposed establishment of a weaving school under the guidance of an imported expert. Early in 1904 the Government of Bengal reviewed the discussion from the time of the Simla conference of 1901; and appointed a representative committee to consider Mr. Pedler's proposals, which were estimated to cost annually Rs. 20,000, and also the proposals of the Government of India for whole-time schools at large industrial centres, as well as for half-time schools for handicrafts in small private establishments. The committee duly met in February 1904. The non-official representatives were nominees of the Chamber of Commerce and of the Bengal National Chamber of Commerce. The committee were in favour of cotton-weaving as the primary subject for instruction, in place of silk-weaving, with the suggestion that instruction in weaving in silk and wool should also be imparted. As regards the site for the school of instruction, the committee were in favour of Serampore instead of Rampur Boalia. Other more ambitious proposals for teaching the manufacture of soap, matches, glassware, cutlery and brass were considered but not accepted. The recommendations of the committee were adopted as the basis for the proposals submitted in June 1904 to the Government of India. The more important of these proposals were:—

(1) that a school for the teaching of improved methods of hand-weaving in silk, cotton and wool should be opened at Serampore under an expert inspector to be recruited from some big manufacturing centre in England, a head-master and a master of drawing and design;

(2) that a higher class should be opened there for the instruction of men of the Sibpur apprentice type, who would in turn become teachers, assistants to manufacturers and manufacturers; and

(3) that a lower class should be opened there for the instruction of weavers and their sons, that similar instructions be given at other selected centres and that all pupils at the school be supported by scholarships.

Provision was made for a hostel, and the question of advances for the purchase of appliances was considered. It was mentioned that further enquiries would be made in the leather and brass trades.

The Government of India considered that their proposals were conceived in the right lines and were well adapted to the local conditions and requirements. It was intimated therefore in October 1905, that the proposed establishment would be recommended to the Secretary of State, who would be asked to select the best man who could be found qualified to organize such an institution. By January 1907 the Government of India forwarded a despatch to the Secretary of State regarding the development of technical and industrial education in four provinces including Bengal, and as regards Bengal supported the proposals of the Bengal Government made in June 1904. In April 1907 the Secretary of State sanctioned the appointments of a principal and an assistant for the Central Weaving School at Serampore, but up till April 1908 the officers required for the charge of the school have not arrived from England, as the appointments have not yet been made. In the meantime every preparation for the opening of the school has been made in the purchase of land and the selection of temporary buildings.

It should not be overlooked that Mr. Collin had in 1890 recommended the institution of a weaving school for silk at Berhampore. The policy now adopted is to make a beginning by the establishment of an institution for the improvement of that cottage industry which, judged by numbers is the most important in the province, namely, weaving. The experience of the Madras Government in their experimental and instructional weaving station at Salem has been fortunate; and the Serampur institute should be similarly successful.

The improvements, however, in mechanical appliances for hand-loom weaving and in the organisation of the trade are a separate matter and are dealt with in the separate report on industrial development.

Proposed appointment of Inspector of Technical and Industrial Schools.

We may now revert to the subject of the inspection of industrial schools. It has been stated above that Mr. Collin had recommended that an inspector be appointed to supervise industrial education. The subject lay fallow till 1902, when Mr. Slater of Sibpur gave illuminating suggestions for its cultivation. After describing the schools then in existence, he desired that European and Eurasian experts be appointed in the various industries which it was proposed to foster; that these experts should be inspectors of local industries; and that the principal of the central technical college should be *ex-officio* director of technical and industrial schools. The Government of India in their letter of 30th September 1903 suggested towards the end that there should be an inspector of such half-time industrial schools as might be created; and in reply the Bengal Government in their letter of the 8th June 1904 proposed in connection with the weaving scheme described above, that there should be one expert inspector of weaving in Bengal, who should also be the principal of the Central Weaving School at Serampore This proposal, however, did not touch the matter of the inspection and control of technical and industrial schools in the province. The opinion of all observers had been that these schools were found wanting in methods, objects and in teachers The rather heterogeneous collection of existing industrial schools was reviewed again in 1904, this time by Mr. Heaton, the Principal of Sibpur College and by Mr. Pedler, the Director of Public Instruction. Mr. Heaton's review was practically an indictment of the existing system. In November 1905, the Bengal Government considered that the industrial education which was under the Education Department should be placed under the Director of Agriculture, with the object of making enquiries, visiting industrial schools, collecting information and submitting proposals on the lines upon which industrial education should be developed. Much information was collated by Mr. Oldham, who was the Director of Agriculture at the time, in the course of his tours; but the advantage of this was lost when he left the department on transfer. This is another argument in favour of a whole-time officer in order to ensure continuity. At the end of 1906 the Bengal Government considered that in view of the increasing interest in the subject and the potential results of a sound system, a more effective agency should be created for the direction and supervision of technical and industrial education. It was held that a special officer was required for the province on the analogy of the appointments of an Inspector of Technical Schools in the Bombay Presidency and of a Director of Industrial and Technical Enquiries, who was also to be Inspector of Technical Schools in the Madras Presidency. The views of Mr. Heaton of Sibpur, who was consulted, were:—the maintenance of the paramountcy of Sibpur College; the appointment of the Principal of Sibpur as Superintendent of Industrial and Technical Education for the modern Bengal province, and the appointment of an inspecting officer under him, to be styled the Inspector of Industrial and Technical Education. In the opinion, however, of the Director of Public Instruction, Mr. Earle, what was required was a recruitment from England, preferably from one of the provincial technical colleges, of an officer who would be responsible for inspecting all technical and industrial institutions in the province, and who at the same time would promote the industrial development of the country by making investigations regarding the larger industries, especially the leather, glass and brass industries. Such an officer was to be styled Superintendent of Industries and Inspector of Technical and Industrial Institutions, and was to be attached for the present to the office of the Director of Public Instruction. This view was accepted by the Bengal Government, and the appointment was recommended to Government of India in August 1907. Two portions of the letter of the Bengal Government may be quoted here. "All branches of professional training should finally, in Mr. Earle's opinion, be under the guidance of a co-ordinating authority or department not connected in any way with education, but concerned with the industrial development of the country." The other was— "The present time is particularly favourable for the development of local industries. His Honour is convinced that only by means of the whole-time service of an expert officer

can the present interest in the question be turned to practical and profitable account." In November 1907 the Government of India stated in reply that there were objections to the recruitment of such an officer from England, and suggested that certain conditions should be fulfilled before the proposal could be submitted to the Secretary of State. The matter is still (April 1908) under correspondence. I may place on record here that my enquiries have shown that in this province what the capitalists, who are anxious to embark on industrial enterprise, most desire is disinterested advice, and this can best be obtained from a Government officer who possesses scientific training, direct experience of the country, enthusiasm and business capacity and the primary object of whose appointment is to advise and assist such capitalists in industrial enterprise. If it be said that it is difficult to obtain an officer with the qualifications named, then the emoluments should be made sufficiently attractive. I hold strongly that one practical enthusiast who would inspire confidence is more required at this present juncture than any departmental scheme, in order to break down the dead wall of want of enterprise, absence of mutual trust and lack of business capacity, which are the real obstacles to indigenous industrial development in the province.

Proposed classes in industrial chemistry at Sibpur College.

Besides proposals under the heads of Weaving and Industrial Schools, the Bengal Government have considered within recent years the proposal for the teaching of chemistry as applied to manufactures. In 1905-1906, the Association for the Advancement of Scientific and Industrial Education of Indians submitted proposals for the establishment of a technical college in Bengal. The model held up for imitation was the Victoria Jubilee Institute in Bombay. This, it should be remembered, is not a Government but an aided institution. A conference under the presidentship of Mr. Oldham, C.S., who was then Director of Agriculture, was held to consider how far the existing College of Civil Engineering at Sibpur might be developed so as to include the departments which it was proposed should be opened. It was recognized that the college already dealt with subjects outside the scope of the title of the college, such as sanitary science, agricultural science, and mining. The subjects proposed for the new technical college were nine in number—mechanical engineering, electrical engineering, spinning and weaving, sheet metal and enamel work, industrial chemistry, dyeing and paints, ceramics, silk, mining and metallurgy. The first, second and ninth subjects were found to be already in the Sibpur curriculum. The third was to be taken up at the proposed weaving institute at Serampore, and the seventh was left to private enterprise. The proposals which Mr. Oldham submitted were:—

(1) that classes be opened, when the Engineering College is transferred from the site at Sibpur to Ranchi, in sheet metal, enamel and tinsmith's work and in industrial and technological chemistry in connection with dyeing, paint manufacture, leather work and assaying;

(2) that research work in lac be undertaken;

(3) that Government grants be offered to persons engaged in the glass industry, to proceed abroad for study, and that assistance be given to them in finding a market for their goods; and

(4) that the Bengal Silk Committee be consulted regarding the opening of a technical school in connection with the silk industry.

Now the college at Sibpur has not yet been removed to Ranchi, although it has been decided that this be done. In the meantime proposals for the tentative opening at Sibpur of classes in technological chemistry, and in dyeing and the chemistry of dyeing, coupled with the plan that instruction should be given in the scientific principles underlying the chief industries of the country, and that facilities be given in research work, were submitted to the Government of India in November 1906. This scheme has also been returned by the Government of India in December 1907, in this instance on the basis of the criticism of the Secretary of State that there was an absence of any information regarding the demand in India for men with the training which the proposed classes would afford The subject is also still under discussion, but the

following points, which have been suggested to me by competent observers, may be noted in connection with that criticism:—

(1) The whole trend at present is to indigenous industrial development; and it is of importance that those concerns should be started which are capable of being worked in small factories on a small capital.

(2) This scheme was the outcome of an appeal from representative Indian gentlemen.

(3) Similar classes have been started by private enterprise at the Bengal Technical Institute in Calcutta.

(4) Four batches of Indians have been sent abroad under the auspices of the association which submitted the appeal named above, and seventeen of them have taken up chemistry as applied to manufactures.

(5) Applications have been made to Sibpur College for chemists, who are required for manufacturing concerns.

The policy of the Bengal Government

On the whole then the principle which underlies the action of the Bengal Government within the last twenty years is that technical education is to be improved by the increased scope and efficiency of central institutions,—a principle which the Bombay Government formally recognized in 1906 and which the Bengal Government announced in 1891. The Madras Government have formally adopted the policy, in Sir Arthur Lawley's words, "that Government should rather develop industries in the first instance precedent to the introduction of schools." Mr. Heaton of Sibpur pointed out in 1904 that the history of industrial schools in other countries shows that they follow the establishment of an industry, but they do not precede it. This too has been kept in view in the proposal which the Bengal Government have made in applying for wholetime expert officers to encourage industries. The Government of the Central Provinces have recently put in a plea for caution and circumspection. The Chief Commissioner, Mr. Craddock, has stated that the real requirement for the development of industries is not a system of teaching existing methods, but a system of teaching improved methods, after it has been ascertained what industries seem to be capable of improvement, to those who are likely to carry on these industries. This, I submit, is the principle underlying the proposal for the Central Weaving Institute at Serampore which, as has been stated above, has been accepted. The policy of the Government of the United Provinces is an advanced policy—the establishment of large central institutions officered by the best teaching talent which can be obtained. Sir John Hewett has stated that his personal inclination is in favour of the training of foremen in theory in the first instance, and afterwards in practical work in the factory and mill. This, it should be noted, is the principle of the organization at Sibpur.

Circumstances of the Bengal Province.

The circumstances of the provinces are not the same. The United Provinces have a natural protective barrier of seven to eight hundred miles of railway freight charges from the seaboard, which gives a bias in favour of manufacture as opposed to commerce. Madras again has very few indigenous manufactures of its own; and the action of its Government in pioneering industries is really not in competition with any existing local enterprise. And finally as regards Bengal, manufactures have generally to compete with imports. The principle accepted at the Simla conference applies especially here, namely, that the supply or development of the existing Indian markets, so far as this is likely to result from technical instruction, is of superior importance to the creation of new export trades.

CHAPTER II.

INSTITUTIONS FOR TECHNICAL INSTRUCTION.

SECTION I—SIBPUR COLLEGE AND ITS SCHEME OF AFFILIATED SCHOOLS.

Standards of instruction.

AN engineering college was established in Calcutta in the year 1856 by the Public Works Department with the object of training engineers and subordinates for

their service. In 1864 it was placed under the charge of the Education Department and transferred to the Presidency College of which it became an important department. In 1880 the college was removed to the site of the old Bishop's College at Sibpur in Howrah district, where the Public Works Department were building large workshops, and it was there established as a civil engineering college.

There are two standards of education at the college:—

(1) Engineering standard for the training of engineers for the Public Works Department and other Government bodies.

(2) The lower or apprentice standard for training men to fill subordinate ranks of the Public Works Department and to carry out similar duties under public or private bodies.

Reason for the development.

It must be remembered that the manner in which the Sibpur College and its connected institutions were organised is due to the fact that it gave an opportunity to students of finding employment in the Public Works Department. The upper subordinate establishment of the Public Works Department contains overseers, supervisors and sub-engineers. These appointments range from Rs. 60 a month to Rs. 500 a month. The lower subordinate establishment are generally called sub-overseers. The pay does not exceed Rs. 40 a month. The overseer and sub-overseer standards may thus be understood with reference to the appointments bearing these names in the Public Works Department. The improvements in the subjects of instruction have already been detailed in the first chapter. The course of instruction for the engineering standard has always been maintained at a high level. Great prominence has been given to practical training in the workshops and in the science laboratories. The course extends over five years, in the last year of which the work is entirely practical. The standard of admission has been since 1892 that of the First Arts, and since 1895 many graduates have joined. The great attraction is the comparative certainty of subsequent official employment. Eight out of every ten students of the Engineer Department find employment under Government, and only one out of ten finds private employment. Mr. Heaton, the Principal, has remarked that this discloses in a startling manner the state of arrested industrial development in Bengal. It is proposed under the new regulations of the Calcutta University that the examination in engineering will take place at the end of the second instead of the third year of the course; and that thereafter the students will have a choice in three branches, namely, civil engineering, mechanical and electrical engineering, and mining.

The higher course.

Mr. Heaton has proposed to enlarge the scope of the Engineering Department by admitting special persons who have no desire for Government posts, but who desire a superior training in engineering. He thinks that on receiving first class instruction such students of the college will contribute largely to the commercial development of the province. During the fifth year of the course students are placed for their practical training, as far as possible, according to their choice, under the Public Works Department, under the Sanitary Engineer, on a selected railway or on a selected mine or at the college itself. The chief prize of the college is the appointment of an assistant engineer in the Public Works Department which is open for competition amongst those who were being sent under that department for training. There is also a demand by municipalities for those who have been trained under the sanitary engineer. The demand for qualified electricians is increasing, and coal mining requires men who combine practical with theoretical training.

The lower course.

The lower standard or apprentice standard consists of three stages:—the sub-overseer course for two years, the overseer course for one year and a half, and a course of practical training extending over another year and a half. An examination is held at the end of the sub-overseer course, and the successful candidate receives a certificate showing that he possesses the qualifications required for a sub-overseer in the Public Works Department. Success at the examination held at the end of the second stage entitles the student to a third grade overseer's certificate. After the completion of the course of practical training, an apprentice would be entitled to a certificate of foreman

mechanic and sub-engineer or of a simple foreman mechanic according to the percentage of marks which he may obtain. The practical training throughout the course is considered by foreign critics to be the best that can be devised; and it is solely owing to the equipment of the Sibpur workshops that the practical instruction can be imparted. For the first year the student attends the carpentry shop; in the second, the smith-shop; in the third, the pattern-making and foundry shop; in the fourth year, the fitting shop. The fifth year is devoted to all-round practical training. During 1907 the numbers under training in these two departments were 94 in the Engineering Department and 233 in the Apprentice Department. It is a comment on the backwardness of the Muhammadan community that there were only five Muhammadans in these two departments.

The affiliation of certain technical schools with Sibpur College has already been mentioned in the previous chapter. The following schools are at present affiliated:— Bihar School of Engineering, Victoria School, Kurseong, Ranchi Industrial School, all under Government; and the Burdwan and Midnapur Technical Schools under their respective District Boards. It is proposed to include also in the scheme the Orissa School of Engineering which is to be formed out of the Cuttack Survey School; and finally St. Andrews Colonial Homes, Kalimpong. It is intended by Mr. Heaton to re-organise the Apprentice Department also. There will be a junior apprentice class for the first two years, and thereafter a senior apprentice class, to whom he would offer a choice of taking specialised courses, namely, a civil engineering course, a mechanical and electrical engineering course, or a mining engineering course. The first course would be for the training of overseers for the Public Works Department, District Boards and municipalities. As has already been explained, it is open for students of the affiliated schools to appear for the sub-overseership examination at Sibpur, and if successful to proceed to the overseer class there. Pupils who would pass what is known as the B Final examination at certain district schools may enter the second-year class of the sub-overseer course at Sibpur. This scheme applies to the Patna Collegiate School in conjunction with the Bihar School of Engineering; the Ranchi Zilla School working with the Ranchi Industrial School; and the Midnapur Zilla School working with the Midnapur Technical School. Mr. Hornell in his quinquennial review of the progress of education in Bengal to 1907, states that the aim of these B classes is general in so far as their inauguration represents an attempt to give a more practical turn to school education; and that it is specialised in so far as these classes were deliberately intended to impart a preliminary training suitable for a specific profession; but that at any rate the B class experiment has hitherto proved a failure. Since the system was inaugurated, only one-third of the candidates has qualified in the final examination. The door was to be open here for the youth of the country who desire to prepare themselves for an industrial career. The misfortune is that at the present time both in the district schools and in the technical schools those enter who do not desire primarily a mechanical training but who wish a short cut (not being themselves sufficiently quick-witted for a literary career) to a qualification which will give them dignified service under some public body. It should be added that B classes were started at the Bhagalpur Zilla School in 1906, but there the mechanical appliances are of the most meagre description, and, although the applications for admission have become numerous, yet it is a curious fact that many pupils are coming from other districts where there are already opportunities for better technical instruction.

Affiliated schools.

Sub-overseer classes.

B classes.

It is not out of place to add here that it is practically settled that in future in order to maintain a uniform standard for sub-overseers and overseers and to take away every suspicion of unfairness, examinations will be held for the two provinces by a board representative of the Public Works Department in both provinces, of the Sibpur College and of the Engineering Schools of Dacca and Bihar. The Principal of Sibpur will be a permanent member and the secretary of this board.

Joint examination board for the two Bengals.

A special course for electrical training was started at Sibpur in 1906, and the development of this branch of instruction was due to an electric installation for motive

Electrical training.

power. About ten of the best apprentices who had passed the overseer course were placed for their special course of practical instruction at the college, where they were entrusted with the charge of the workshops and the electric light installation. It is stated that this training is prized because it leads to well-paid appointments.

Mining Engineering.

In 1904 the Government of India requested the Bengal Government to prepare a scheme for instruction in mining engineering. It was decided not to create a separate school of mining in the mining districts, but to make use of the existing facilities for giving the major part of the instruction at the Civil Engineering College. A mining class has now been formed. A student who has passed the sub-overseer standard may join the class for a specialised course of two years. Six weeks of each year are also to be spent in a mining district, in the study of mining surveying and in practical training. Diplomas are awarded. Under the Indian Mining Act of 1901 certificates of competency are required. The possession of the diploma in mining engineering can exempt the possessor with the permission of the Board of Examiners from a term of two years out of the period of five years' practical experience which is required for a first class certificate. In addition, under the auspices of the college, a scheme has been inaugurated for providing instruction in mining for assistants and others employed in the Bengal colliery districts; and a special Mining Advisory Board has been attached to the college. Since November 1906 there has been a regular course of instruction at the centres, Sanctoria and Charanpur in the Raniganj coal district, and Jherria and Sijua in the Jherria district. Both from the reports and from my personal enquiries I gather that the scheme has been most successful, and that local committees have been of great assistance in arranging sites and accommodation for the lectures.

This instruction in mining has required the addition of two expert Europeans to the staff, one for the professorship at Sibpur and the other for the instructorship in mining for the district lectures.

Motor driving.

An extension of the scheme is desirable. Continuation schools for teaching arithmetic, physics, chemistry and mechanics are recommended by the instructor, Mr. Griffiths, for Dhanbaid and Asansol, and also evening classes at Ekra, Raniganj, Kalipahari, Barakur and Jamuni.

A further development has been in the establishment of the training of motor-driver mechanics. The course of instruction includes both maintenance and driving. There is a great and increasing demand for competent mechanics who can drive. The beginning was made by taking over from the Public Works Department a second-hand car which had to be practically reconstructed.

It can therefore be maintained with justification that the Sibpur College curriculum has kept abreast of the requirements of the time, and that the principle laid down in the Government resolution of 1891 on Mr. Collin's report has been consistently followed, though not always consciously.

Section II.—Bihar School of Engineering and the Cuttack Survey School.

Origin and progress of the School for Bihar districts.

The Bihar School of Engineering is a handsome building on semi-oriental lines, and with its hostels and workshops forms a striking block on the bank of the Ganges at Bankipore. In 1890 the Patna Survey School was transferred from the Patna College buildings to new premises made over to it by the committee of the Bihar Industrial School Fund, a fund which originated from the balance of the fund raised in Bihar in 1877 for the reception of the Prince of Wales, the present King. In 1893 the Principal obtained particulars of the occupation of more than half of the *ex*-students: they were found to be employed as overseers, sub-overseers, draftsmen, surveyors and survey teachers both in public and private employment. By 1894 the school was being gradually transformed into one in which all the instruction was given in English. In 1896 the Survey School was amalgamated with the Bihar Industrial School and the new institution at Bankipore was entitled the "Bihar School of Engineering." The course provided complete instruction for sub-overseers. The

next improvements were the appointment of an European foreman mechanic for the workshops in 1899, and the appointment of a European head-master under the sanction of the Secretary of State in 1890. In the latter year the foundation for instruction up to the overseer standard was made. In 1904 a hostel was erected; and in the following year it was found that this had developed in a marked degree the corporate and social life amongst the students,—setting an example which many colleges in Bengal might follow with great advantage. The curriculum now follows the same ground as that covered by the four years' course of the Apprentice Department of the Sibpur College; and though it has not yet any formal arrangements for conducting the practical training which completes the Apprentice course at Sibpur, nevertheless Mr. Walford, the present Head-master, has been able to arrange for practical training under Executive and District Engineers in Bihar. There is also a one-year class for the training of Amins. The electric light plant has made it possible to give a practical training in electricians' work. Mr. Walford has informed me that the school has acquired a reputation in all Hindi-speaking districts and that enquiries come to him from some Native States and from the Central Provinces.

There has been on more than one occasion a request from the leading residents of Patna that the school be raised to the status of a college. I am not, however, sure that it is on their part quite understood or known what the establishment of a college would entail. The reply of the Bengal Government has been that for the present it is not possible to have more than one civil engineering college thoroughly equipped both in plant and establishment. The number of possible Bihari candidates for Sibpur is still too small to justify the extra staff and expenditure. The history of the school shows, however, a steady advancement, and it is natural that Biharis should desire the prestige which would attach to the establishment of a college. It is an undoubted fact that Biharis at present are unwilling to proceed to the central college at Sibpur situated as it is in a Bengali district. When the Sibpur College has been transferred to Ranchi, a district which has more in common with the Bihari districts, the unwillingness of the Biharis may possibly disappear. But at the same time it is quite feasible that a system of practical training for one year and a half may be formally organised, similar to that of Sibpur; and this is the first natural step in the future progress of the institution. In this way the institution would be able to give a certificate up to the foreman mechanic and sub-engineer standard. If it is possible to generalise, it would appear that the Biharis have a natural aptitude for practical engineering. Professor D. N. Mallik of the Patna College, who has recently visited technical institutions in England informs me that the Brighton Technical School in its technical branches furnishes an ideal to which the Bihar school should work up in time.

While we can record nothing but success and progress in the scheme for technical instruction at Bankipore, yet it must be admitted that the arrangements for training artisans have been an entire failure, just as at Sibpur, and that the B classes are nothing but a farce. I doubt very much whether it is sound to arrange at the same institution for the instruction of overseers who come from the middle class and for the instruction of artisans. I shall deal with this more fully in connection with the chapter on industrial schools.

School for the Orissa districts.

The Cuttack Survey School is the only school of its kind in the province. The curriculum includes surveying, road-making and smithwork, but not carpentry or science. Mr. Hornell has explained in his Quinquennial Review of the Progress of Education in Bengal, 1902-1907, that the school teaches up to the sub-overseer standard in the sense that students who pass the final examination are eligible for sub-overseerships in the Public Works Department, but that the school does not yet teach the full sub-overseer course. There is also a class for Amins. The proportion of Uriyas continue to be two out of three students. Practically no change has been made since 1890. The obvious form of advancement is to make use of the existing Canal workshops of the Public Works Department at Cuttack and to raise the instruction to the sub-overseer standard. It has been settled that this be done. The school will then be called the Orissa School

of Engineering, and in all probability the supply will not be in excess of the demand for qualified subordinates in the Uriya-speaking tracts.

Section III.—Technical Schools.

Burdwan Technical School.

Burdwan. The Burdwan Technical School is administered by the District Board. The subjects taught are carpentry and smithery. The average attendance is 47; more than half are Brahmans and Kayasths, and more than half are boys from districts other than Burdwan district. The course is a sub-overseer course leading up to the overseer standard at Sibpur. During the last three years 25 pupils have been sent up, of whom 17 passed the sub-overseership examination. The workshops I found to be cramped. A local committee takes considerable interest in the school. While this school does not turn out men who are likely to be mechanical engineers, but men who desire to be sub-overseers or possibly overseers, it should nevertheless be continued in its present form as a feeder to Sibpur College, for the demand for well-trained sub-overseers and overseers is not likely to diminish. I advise the committee, however, to refrain from slackening the strictness of the standard of general education required from would-be students.

Midnapore-Maisadal Technical School.

Midnapore. This school teaches up to the sub-overseer standard. It is named after a wel-known landed proprietor in Midnapore, who was a generous contributor to the fund by which the school was started about twenty years ago. In the first year of the sub-overseership course the work is carpentry; and the second, smithery. The head-master is a passed foreman mechanic from Sibpur. As at Burdwan practically all the pupils desire to go in for service. As at Burdwan the accommodation is scanty.

The pupils live in a hostel about quarter of a mile away from the school. What is required is more money and more organized management. In 1905 the condition of affairs was so bad that the Principal at Sibpur recommended that the privilege of affiliation should be withdrawn. A strong committee has, however, been since appointed in which are included the District Engineer, the Executive Engineer of the Public Works Department and the Chief Mechanical Engineer of the Bengal-Nagpur Railway, the head-quarters of which are at Kharagpur close to Midnapore. The school does not, and is not likely to, turn out men who will become practical mechanics. I recommend that on no account should a mistaken kindness be exercised in admitting students who have not passed the Entrance Examination. The system of apprenticeships for the Kharagpur Railway workshops gives an opening to any passed pupil who wishes to obtain practical and remunerative employment, but every applicant must remember that there is far more drudgery to be undergone in a commercial workshop than in the workshop attached to an academical institution. Government has made a grant of Rs. 5,000 for the erection of a new school building.

Bengal Technical Institute.

Calcutta. This institute was founded by a society called "The Society for the Promotion of Technical Education in Bengal" which was registered under Act XXI of 1860. It was started in August 1906 at 92 Upper Circular Road, where large workshops have been erected—mechanical workshops, smithery, electrical engineering shed, and a carpentry shed. There are also arrangements for teaching drawing, chemistry and dyeing. There are moderately well equipped physical laboratories. The institute was started under the revulsion which followed the partition of Bengal, but the system of instruction has fortunately been directed on sound lines. For funds the committee are principally indebted to Mr. Palit, Barrister-at-law, and have the advantage of the assistance of two master minds in the mechanical and educational world of Calcutta. All the courses have not yet been started. The secondary course, as it is called, is for three years, though, it is hoped, it will be extended to four years.

It is proposed to have courses in mechanical engineering, electrical engineering, sheet metalling, technological chemistry, commercial course and economic geology. This is an ambitious syllabus, but for the present complete arrangements have only been made in the mechanical engineering course. The governing body propose that the technological chemistry course will deal with the following subjects:—geology, ceramics, tanning, paint and varnish-making, dyeing and bleaching, soap, candle, oil and perfume-making, and the preparation of matches. On the engineering side the instruction will be similar to that given at Sibpur. But there is here an excellent opportunity for young men to become foreman mechanics in reality as well as in name, and to take advantage of the demand which the anticipated industrial activity will promote. The course for industrial chemistry is still in its infancy, but it has anticipated the proposals for the establishment of similar classes in Sibpur, which classes, I hope, may be the nucleus of a Government technical institute in Calcutta, after the engineering branches of Sibpur College have been removed to Ranchi. I advise the governing body of the Bengal technical institute to place it on a sound financial footing, and to insist that only those youths who have received a sound general education, should be allowed to join its classes. It is quite a mistake to think that only the dullards, who have no chance of success in the usual literary careers, should take up a specialised branch of technical study. John Stuart Mill said in 1866:—"Special knowledge is sought after only by a certain number of young men, and it is only when they have completed their education, properly so called, that they should be permitted to enter upon it. The good or bad use which they will make of such knowledge will depend chiefly on their mental character, and character can be formed only by general education."

Technical Department of the Bengal National College.

The Bengal National College has been inaugurated under the auspices of the National Council of Education, Bengal. It has been established at 166, Bowbazar Street since July 1907. It has a secondary technical course extending over three years. A workshop has been erected with machine plant to the value of Rs. 11,000. The syllabus includes a general course of instruction in physics, chemistry, mathematics, drawing, and a special course in machine drawing, mechanics, machinery tools, pattern making, brass modelling, smithery, turning and fitting. The proposed college course on the technical side, which is to follow, is proposed to be subdivided into (*a*) agriculture including forestry; (*b*) manufacture, including mining; and (*c*) commerce. The scheme of education has been thought out with a view to help the students in "finding new and independent careers in life in the departments of arts and industry." The instruction imparted is to be theoretical, experimental and manufactural. In January 1908 there was an exhibition of the articles turned out in the workshops and laboratories during the year 1907, and Professor Brühl from Sibpur was able to say that the articles were not only of solid construction, but that they showed in general that finish which is proper to all first class work, and that some of the models indicated the exercise of great care and patience. This institution like the Bengal Technical Institute was founded in a spirit of independence, and if that spirit will train up youths to aspire, not to seek dignified and somewhat leisurely careers, but to become capable foremen and masters in the indigenous industrial activity which may yet come in this province, the institution will serve a useful purpose. At the present moment, apart from the advice of Indian publicists, the better class youths have been forced, in spite of their traditional prejudices against manual labour, into industrial lines on account of the competition which has closed up the avenues hitherto open to them in literary careers. This institution is also making manual instruction in some form or other a part of a general liberal education, not necessarily with the intention that all the pupils should take to mechanical employment.

Calcutta Technical School.

In 1900 Mr. Finlay, the Chief Engineer of the East Indian Railway, with the assistance of some of the leading engineering firms, started a night school with

continuation classes for giving instruction to apprentices who are working in large workshops in Howrah. As it was found that a large number of the apprentices lived in Calcutta, the site was changed to the Doveton College, Calcutta, where classes are held twice a week. The staff consists of three highly qualified European lecturers. The school is fulfilling a useful purpose, that is, supplementing daily practice by theoretical instruction. The accommodation is not suitable and the school is ill equipped with apparatus. If the institution were improved in these respects, for which improvement I have separately submitted recommendations, there should be no reason why a larger number of Indian apprentices should not take advantage of the school.

RAILWAY TECHNICAL INSTITUTION.

This was started in 1908 at 83 Dhurrumtola, Calcutta, to provide a means for acquiring some practical training in the various methods employed in the actual working of railways. Practical training is to be given in telegraphy, signalling, goods and coaching. There is no other such private institution in Bengal. The school is well equipped for teaching practical signalling and practical telegraphy. It has already over twenty students—all natives of Bengal—in the telegraph class. A student can become adept in two months, working for six hours a day, at a fee of Rs. 10 a month. The school deserves encouragement, if it can show that its students are obtaining employment. It has been started on sound lines.

VICTORIA SCHOOL, KURSEONG.

Darjeeling District.

A sub-overseer class for Europeans and Eurasians was opened in 1904 in connexion with the Victoria School, Kurseong, and is affiliated with the Sibpur College. Of the eleven students since sent up for the sub-overseership examinination, seven have been successful.

ST. ANDREWS' COLONIAL HOMES, KALIMPONG.

At the annual meeting in March 1908, it was announced that the affiliation with the Sibpur College had been sanctioned, and that the first batch of boys was now being prepared for the engineering curriculum.

SECTION IV.—SCHOOLS ATTACHED TO RAILWAY WORKSHOPS.

This may be considered as part of a system of continuation schools. In Chapter VIII of "Continuation Schools in England and elsewhere" edited by Professer Sadler of the University of Manchester and published at the University Press, 1907, there is a summary of the replies received from 16 railway companies and 56 other employers of labour in England regarding the facilities granted to their employees for the study of subjects dealing with their daily work. The system of requiring apprentices to attend technical schools is extending in England, and facilities in varying degrees are being given to that end. In 1890 Mr. Collin said that the apprentices at the Jamalpur workshops of the East Indian Railway were obliged to attend evening classes, not for technical instruction, but as a continuation of their general education. At that time there were no other railway night schools in the province. In 1908 we find that the technical night school at Jamalpur is giving instruction in technical subjects, such as steam-engine and machine construction, applied mechanics, algebra and mensuration. The average nightly attendance is 50. At the Kharagpur workshops of the Bengal-Nagpur Railway, attendance for apprentices at the technical night school is compulsory. The subjects are geometry, applied mechanics, algebra, mensuration, geometrical drawing and arithmetic. At the Carriage and Wagon Workshops of the East Indian Railway at Lillooah, the technical school for apprentices gives instruction within working hours, one hour in the morning for two days a week. The subjects are arithmetic, algebra, mensuration, applied mechanics, linear drawing, projection and mechanical drawing. There is an attendance of 33 youths, of whom no fewer than 17 are Indian lads.

At the Kanchrapara workshops on the Eastern Bengal State Railway, there is no technical school or evening class, but it is proposed that on the completion of a hostel for apprentices, which is now under construction, a night school will be held for the apprentices. At Samastipur on the Bengal and North-Western Railway, there is no night school or other means of studying machine drawing or technical subjects. There is also no drawing office here, and so a machine foreman cannot obtain any training in drawing. While on the one hand it is too much to expect that commercial undertakings will supply an education in advance of their requirements, yet on the other hand it would appear to be in the interest of the employers themselves to give to their apprentices a knowledge of the theoretical principles which underly their practical work. This should be encouraged. The system at Lillooah is best, I think, namely, that instruction should be given within working hours, and not at night. These schools should teach theoretical work directly connected with practical work, and the minimum qualification in general education should be the Entrance Examination or its equivalent.

Section V.—Calcutta Government School of Art and other Art Schools.

Calcutta School of Art.

The School of Art was started in 1864 and until 1893, when the school was removed to the new building in the Chowringhee Road, it had been held in various houses in Bow Bazar which were in every way ill adapted for the purposes of a school of art. In 1890 it was recorded by Mr. Collin that the Calcutta School of Art had been established partly to develop the native industries, but that it had not accomplished much for industrial art. In 1891 the Bengal Government said that it was not too much to hope that, if duly supported and encouraged, the School of Art might do for Bengal all that South Kensington had done and was doing for industries, both manufacturing and artistic, in England. This ideal has not yet been reached. In 1894 Sir Alfred Croft, who was then the Director of Public Instruction, Bengal, pointed to the popularity of the school and to the fact that there was a remunerative demand for the special skill which was then being developed in the subjects of drawing, designing, wood-engraving and modelling (Papers relating to Maintenance of Schools of Art in India as State Institutions, Home Department serial No. 23, 1898, page 81). Mr. A. N. Tagore, Officiating Principal of the Calcutta School of Art, in describing the progress from 1902 to 1907 considered that the School of Art had neither fulfilled the conditions of a truly industrial establishment, nor had it done much towards the improvement of the fine arts of the country. The disposal of all European pictures and the purchase of Indian art ware in 1904 marked a step towards the one ideal of forming a truly Indian art gallery; and the present intention to bring the Industrial Art section of the Indian Museum under the control of the Principal of the School of Art and the recommendation of the Conference of the Principals of Schools of Art in India held in 1905-06, to issue for the use of artisans pattern books containing typical and pure examples of traditional art are an advance towards the other ideal. At present the School of Art in Calcutta does nothing to affect indigenous industrial art outside of Calcutta: a closer touch with the best workmen in the province is required. I also think that the diploma in mechanical and architectural drawing should have a higher value than it now has with a view to remunerative employment.

The course of instruction is in two divisions:—one affording a systematic instruction in drawing and design for drawing and technical art teachers, draughtsmen, artisans, art workmen and designers for art industries; and the other for those who wish to study drawing, painting and modelling with a view to become painters or sculptors. The summary on pages 88 to 90 of Mr. Hornell's Progress of Education in Bengal, 1902-1907, gives as full a summary as is necessary to understand the present position of the school. The fault of indigenous art is the slavish imitation of conventional European patterns. The remedy is not altogether in the hands of Government.

Mr. Tagore assures me that he fully agrees as to the necessity of circulating good Indian examples in art designs—the view eloquently expressed by Lord Curzon at the opening of the Art Exhibition of Delhi in 1903: "Indian art will never be revived by borrowing from foreign ideals, but only by fidelity to its own."

PRIVATE SCHOOLS.

There are three private art schools in Calcutta—the Albert Temple of Science started in 1875, the Indian Art School in 1895, and Jubilee Art Academy in 1897. The details will be found in appendix II. None of these is aided by Government. They teach drawing, painting, engraving and modelling and kindred subjects, but they turn out principally artists in painting. At the first named school I found European casts, European drawing books and European designs for painting. The managers of this school are strongly representative of the *swadeshi* movement. I have pointed out this inconsistency to the Principal of the school.

CHAPTER III.

INSTITUTIONS FOR INDUSTRIAL INSTRUCTION.

Existing defects and lines of improvement.

DETAILS regarding all the technical and industrial institutions in the province will be found in appendix II. I deal below with various types of industrial schools—in the sense of schools for the instruction of would-be artisans, most of which I have visited. Mr. Hornell has given a short account of these schools at page 109 of the Bengal Quinquennial Review, but this is based principally on departmental reports In 1890-91 there were in the two Bengals 15 industrial institutions with 580 pupils and after ten years in 1900-01 there were 27 such institutions, with 887 pupils. In 1906-07 there were in the Western Bengal Province 1,275 pupils in 52 institutions of which more than half are in the Chota Nagpur Division; many of them have practically no effect on industrial development, and the people themselves do very little without assistance. So industrial education is yet in its infancy. The arguments in favour of a whole-time officer for the promotion of industries and industrial education cannot be better expressed than in the words of Mr. Hornell, at page 111 of his Review, which I reproduce in full.

"There is still apparent that lack of definiteness, both of methods and objects, that want of co-ordination with local industries or trades, and that uncertainty of initiative and support which will always prevail so long as the schools have to depend upon the volition of local bodies rather than upon any sustained policy of Government. Moreover, in the face of the great preponderance of classes teaching carpentry and smithy work it is difficult to resist the conclusion arrived at by Sir Edward Buck as regards technical and industrial schools in India, viz., that their object appears to be to teach these subjects to boys who have no intention to become carpenters or to engage in any manual occupation whatever. It is not maintained that there are no industrial schools at which sound work is being done. It must, however, be admitted that the effect of the existing schools on the industrial development of the province is practically negligible.

"The reason for this want of progress is not far to seek. A system of industrial schools co-ordinated to the trades and industries of the province can never be created except on the initiative of a department or at least an officer whose business it is to study those industries. If any real and steady progress is to be made, there must be at least one officer possessed of the required capacity who, while it will be his business to be generally acquainted with the larger industries of the province, will be available to conduct special investigations into the conditions of any particular industry which either he or others may think it desirable to develop by some such scheme as that proposed at Serampore. Such an appointment has recently been proposed to Government, and it has been suggested that the officer to be recruited should be styled "Superintendent of Industries and Inspector of Technical and Industrial Institutions." It is recognized that industrial development,

even in that aspect of it which is called industrial education, lies outside the proper scope of the Education Department, and even though it is proposed that the officer whose recruitment has been suggested should, to start with, work in connection with the Education Department, it is not considered that this is desirable as a permanent arrangement. On the contrary it is hoped that this appointment will lead in time to the creation of a Department of Industry to the control of which all technical and industrial institutions will be transferred."

SECTION I.—MANAGED BY GOVERNMENT.

Mr. Collin on page 21 of the 1890 report made suggestions for industrial schools. He made suggestions for Ranchi, Burdwan and Midnapore; and for Rajshahi and Chittagong, now in the Eastern Province. At Ranchi there was a private Missionary school started in 1870. It was reorganized in 1890-91, and taken over by Government in 1894. Had the school not arisen in this way, Ranchi would have been the most unpromising centre for Government to institute an industrial school; for until lately it was remote from all industrial centres. This school has a certain amount of antique machine plant, sent from Sibpur in 1901; it has also a carpenter's shop; and the course includes cane-work and carriage painting. The instruction given here is for sub-overseers, the B classes and for artisans. The sub-overseer class should disappear when the Engineering College is removed from Sibpur to Ranchi. The B classes for the same reason should disappear: for the object of the B class is to provide an easy up gradient to the Sibpur curriculum. Strangers came to Ranchi attracted by easy conditions and a good climate. The artisan classes are for blacksmithery, carpentry, cane-work and carriage painting. Instruction is also given in reading, writing and arithmetic. The Munda boys who fill the school are, I am informed, relaxing their traditional repugnance to metal work. There are now practical engineers on the committee, representing the District, the Public Works Department and the Bengal-Nagpur Railway, and I trust that the artisan classes, which represent 60 out of 82 pupils, will be strongly developed. In fact, the school should be primarily an industrial school. A good fitter on Rs. 70 is required for the blacksmith's shop. More room for the teaching of carpentry is required. Mensuration and mechanical drawing should be taught to all boys. Every endeavour should be made to link up the industrial school with the Bengal-Nagpur Railway workshops at Kharagpur and Adra, and to give the boys opportunities for remunerative employment. The school must also act as a Normal training school for supplying teachers to the local industrial schools in the Chota Nagpur Division. In 1906-07 six from the carpenter's department, and one from the blacksmith's department passed the qualifying test, and are now earning a livelihood in Ranchi district. There is a further opening in the training of the boys as motor-car *mistris*. There is, and will be a local demand for youths who, while not fully trained mechanics, have the qualification of a "cleaner" in a locomotive running shed. This is the principle followed by Mr. Chatterton in Madras in training youths for the maintenance of the oil-engines which he is distributing throughout that Presidency.

The artisan classes at Bankipore and Sibpur come under this head. They are a failure at Bankipore, and declining at Sibpur.

SECTION II.—INDUSTRIAL SCHOOLS CONNECTED WITH COMMERCIAL WORKSHOPS.

The best school in the province is that of Beniadih attached to the workshops of the East Indian Railway Company's collieries at Giridih. Formerly the lower primary standard was the qualification for admission, but this is being raised to the upper primary standard. The Company are primarily concerned with recruiting youngsters who will in time become competent journeymen on the railway staff. The boys from the beginning receive a wage of some kind. A Government grant was allotted; but it was not enough to obtain the stamp of teacher required. A teacher has now been obtained from the Victoria Jubilee Technical Institute in Bombay. He teaches

drawing and mensuration. Since 1904-05, no English has been taught. For three-fourths of the working hours of the day, the boys have practical training in the workshop under European supervision. In school hours they receive instruction in simple mechanics from one of the Assistant Managers. The school is visited by educational officers: the remarks of Mr. Stark, the Inspector of Schools, are encouraging and friendly, but the Sub-Inspector and Deputy Inspector do not appear to realize that the class for instruction is an appanage of the workshop; and thus they misapprehend the object in view.

At Samastipur an artisan primary school has been started by the District Board of Darbhanga in conjunction with the Locomotive workshops of the Bengal and North-Western Railway. Here the case is different. The pupils are outside boys of artisan castes who attend a primary school, and who receive practical instruction for half the day in the workshop. It is an approximation to the kind of school suggested in the Government of India letter of 30th September 1903:—(1) "Keeping up and developing a boy's inherited manual skill; (2) giving him a general education which will enlarge his prospects as a craftsman, while preventing him from falling in a clerical groove"; but the practical work was proposed to be "working for half the day; as registered and supervised apprentices under approved artisans." This school is not, however, quite satisfactory; and will not be satisfactory as long as the primary education is considered the more important. A competent teacher is required.

More than thirty years ago at the Dehri-on-Sone Canal workshops, a class for instruction for the young employees was started by the Superintendent; but in time the original idea that it was to be subordinate to the workshop was overlooked. There is a village school now, but it is a regular school under the Educational Department.

I hold strongly that as far as possible industrial education should be given in a commercial atmosphere: that where the school is in commercial surroundings, competent teachers are usually available and a future livelihood for the artisan is open; and that in Bengal more practical effect should be given to the counsels in the Government of India letter of 1903, paragraph 10, which affirms that where there are organization and capital, there must also be the intelligence to appreciate the value of properly trained workers. But this, as will appear from the context, was intended rather for the training of the foreman than for the training of the journeyman.

The State Railway and Canal workshops provide an opportunity for the training of the would-be journeyman. I shall enlarge on this later.

SECTION III.—INDUSTRIAL SCHOOLS IN CONNECTION WITH MISSIONS.

Much good industrial work is being done in the Missionary industrial schools. They have the advantage of European control, usually enthusiastic and frequently practical. Yet even in these schools the fact is not kept sufficiently in view that the teaching which is given is meant to enable the pupils to earn a livelihood, and that the test of their efficiency is whether old pupils are actually earning their livelihood at the craft which has been taught to them. I give short notes on some of the schools.

London Mission Society at Kaurapukkur, 24-Parganas District.—Carpentry and carpet making are taught; but rather as a training for hand and eye than as a form of industrial education. There is, moreover, no local demand for either craft. The teacher in carpentry is a skilled artisan from a Calcutta shop.

Oxford Mission at Ballyganj, Calcutta.—The system is to give manual instruction to all boys up to twelve years of age. Above that age the less clever boys stick to the industrial classes. It is unfortunate that only one in five continues in industrial work after leaving the school; half of the boys who leave go back to cultivation. Still the fault is not with the teaching which is good. Carpentry, carving and viceman's work are taught. There is a good demand for the carpentry.

Church Missionary Society at Hatchapra, Nadia District.—This was started under a mechanical genius, Mr. Blackburn, and continued under Mr. Kamcke. The school has now an engine and some sawing and planing plant. The teaching is good and sound, the intention being that the boys shall earn their living in industrial lines. The school has the local advantage that it is linked up with the Eastern Bengal State Railway workshops at Kanchrapara, and the Nadia District Board helps with scholarships some pupils who go there.

Wesleyan Mission at Bankura, Bankura District.—An attempt is made to attract some of the clever boys away from the literary side. Carpentry, cane-work and boot-making are taught. The carpentry is good. Seven boys have obtained employment in the Adra work-shops of the Bengal-Nagpur Railway. I have suggested that there should be a hostel for the boys either at the Kharagpur or the Adra workshops.

American Free Baptist Mission at Balasore and at Santipur, Balasore District.—The work at Balasore is sound: the boys are taught to be artisans, in carpentry, book-binding and shoe-making and the like. The school deserves some Government assistance.

The school at Santipur is doing good work in weaving, carpentry, mat-making and rope-making: it is subsidised by Government.

Society for the Propagation of the Gospel Mission School at Chaibassa, Singhbhum District.—The Mission has put considerable stress on industrial teaching; and much good work in carpentry has been turned out. Instruction is also given in carving, in stone-work and in weaving.

SECTION IV.—INDUSTRIAL SCHOOLS CONNECTED WITH AND AIDED BY DISTRICT BOARDS.

Khulna District.—The Coronation Technical School is the result of a compromise between the views of those who wished instruction to be given in survey to youths of the middle class, and those who wished instruction to be given to the sons of artisans. There is an Amin class for the former, and instruction in carpentry for the latter. This is a good type of an artisan school, but the boys should be taught to understand and make simple sketches, and work from plans. B classes have lately been started here; but I see no good in them.

Saran District.—There are three Dome schools, but these are not very efficient. They are special schools started for the purpose of keeping Dome boys out of mischief, rather than with the hope of teaching them remunerative employment. If it were possible, better teachers should be obtained.

Hazaribagh District.—Through the efforts of Mr. Radice, the Deputy Commissioner, 18 half-primary, half-industrial schools have been started on the lines of the Indian Government proposals of 1903. The scheme is to start a class of practical instruction under a competent artisan in conjunction with a primary school, the teacher in which is expected to teach geometrical drawing in addition to the three R's. The subjects of practical instruction are smithery, carpentry, weaving and pottery. A beginning has been made, but much has still to be done. Mr. Radice would be the first to admit that all the schools are not equally successful. Everything depends on the teachers. If he is above the average, and boys will attend both the primary school and his practical school, the boys will improve as craftsmen. But as the schools are subsidised by the District Board, there is every temptation for pupils to join who desire only the general education; and I found at one school well-dressed sons of Baniyas who had no industrial ambitions at all. On the other hand at Palawal, I saw that the teacher was teaching practical work. It should be borne in mind that the conditions laid down by Government in 1903 were:—(1) only artisans should be admitted; (2) the education should not fit the pupil for clerical employment; (3) scholarships for pupils should be given, and (4) an efficient Inspector should be appointed. In Hazaribagh there is a Special Sub-Inspector, but he has not sufficient technical knowledge. A praise-worthy attempt, however, has been made to start the half-time industrial school. But if this is to be continued, there must be

better teachers. The Ranchi Government School should be able to provide some. And there must be a more capable Sub-Inspector. And only artisans' sons should be admitted. There is an increased demand in the Chota Nagpur area for skilled craftsmen, and each of these schools which is successful, helps a little in the rural tracts.

Ranchi District.—There were schools at Bandu, Patuahata and Basounda. The teaching at the last two was inferior, and the District Board proposed to close them. The school at Bandu had an intelligent and qualified artisan. The monthly grant for Bandu was Rs. 19-8; so it depends on the teacher.

Manbhum District.—At Jhalda I saw probably one of the best of these half-time industrial schools. The teacher was competent: the boys were all artisans; one who had left had started for himself as a blacksmith. But only six out of the sixteen were attending also the primary school. The weaving institution at Raghunathpur near Adra had become a farce, and I have endeavoured with the help of Mr. Watson, the Deputy Commissioner, to have it placed on a commercial basis.

Burdwan District.—There is nominally an artisan class at the Burdwan Technical School; but there are no pupils.

Midnapore District.—The artisan class at the Midnapore Technical School could boast of only one pupil.

SECTION V.—PRIVATE SCHOOLS, AIDED AND UNAIDED.

The Muhammadan Orphanage Industrial School in Calcutta is a type which deserves encouragement. The boys really learn and the teachers are competent: the subjects are tailoring, embroidery, carpet-making, press work and lithography. I would ask that more trouble be taken to keep an exact record of all the boys after they leave the school. On the other hand the Anjumani-Rafiq-ul-Islam Industrial School in Calcutta is not working on sound lines. It is rather a denominational school, with a little sewing and watch-repairing thrown in. I have appealed to those responsible to remember that the boys have to earn their livelihood by what they learn there and that the instruction should be real, not make-believe.

The Lab Chand Matichand Jain Literary and Technical School is the result of a pious foundation, the object of which is to give both a literary education and a training in "practical arts relating to the manufacture of jewellery as well as industrial and technical arts". This has now 80 boys, although it started only in August 1907. I have advised the management to give two-thirds of the instruction to practical training and one-third to literary training, instead of one hour of practical instruction out of five and a half hour's attendance—a proportion which can hardly entitle the school to be called an industrial one: to use standard drawing books, and to insist on the accuracy of the mechanical drawing.

The Fakharpur Carpentry School in Gaya District and the Alalpur Industrial School in Balasore District are two instances of spontaneous industrial training. The former has a competent teacher, but he does not teach properly. In the latter case, the founder is an Uriya gentleman with a practical turn of mind, who has raised the standard of craftsmanship in his neighbourhood. Such schools need guidance, and deserve pecuniary encouragement.

SECTION VI.—INDUSTRIAL SCHOOLS FOR WOMEN.

There is a school called the Mahila Shilpasram in Calcutta; and there are the schools under Missionary guidance for lace work at Ranchi, Khunti, Chaibassa and Kalimpong. These are considered under the heading of this industry in Part II of the Special Report. These lace schools appear to be likely to provide remunerative employment, and are capable of much development under the lace experts, who have been imported by the Missions, provided the disposal of the product is effected on commercial lines.

Section VII.—Reformatory Schools.

The Reformatory Schools at Hazaribagh and Ranchi have been treated since 1900 as educational institutions, and crafts are taught which the boys may follow up when they reach the statutory age for their detention. The following table gives the numbers under instruction at the two schools.

			Alipore.	Hazaribagh.
Blacksmithy	...	...	13	7
Bookbinding	...	...	18	...
Cane-work	...	...	13	...
Carpentry	...	...	50	15
Painting	...	...	9	...
Printing	...	...	22	...
Shoe-making	...	...	3	7
Tailoring	...	...	16	5
Tin-work	...	...	9	...
Weaving	...	...	...	13

It is interesting to know what becomes of the boys after they leave the Reformatories. From the figures which have been collected for the past three years, we learn that of the boys who received instruction in trades, 22 per cent. from Alipore and 25 per cent. from Hazaribagh adhere to these trades for their livelihood after their release.

CHAPTER IV.

SYSTEMS OF APPRENTICESHIP.

Apprenticeships in railway and other workshops.

Mr. Collin pointed out in paragraph 58 of his Report that whereas a number of handicraftsmen of all sorts was being trained in railway workshops, mills and private firms in Calcutta, yet this training did not reach the educated classes in India, who are required as supervisors and foremen; and that the latter were in most cases imported. In paragraph 61 he further pointed out that proprietors were alive to the advantages of having a local supply of trained youths ready to take the place of foremen, but that they preferred the imported Europeans. I gather that the opinions of employers are now not so rigid, and that the educated youths are now showing a willingness to join as apprentices if they had the opportunities. A youth of good family and good education has informed me that he was willing to indenture himself with Messrs. Burn & Co, but that his guardians disallowed his request. On the other hand I recommended another youth of similar qualifications who seemed to have an aptitude for mechanics to join the motor workshops of Messrs. Kilburn & Co., and he is now earning as a mechanic in private employment five times as much as he would have earned in the clerical line in which I found him. The Superintendent of the East Indian Railway Locomotive Workshop at Jamalpore, Mr. Tomyns Browne, informs me that he is in favour of indentured apprentices and that he would like to see that Government should insist, wherever it was able to do so, that workshops should entertain at least a certain fixed percentage of indentured apprentices to their entire mechanical staff. In the Carriage and Wagôn Department of the East Indian Railway at Lillooah I found that out of the 33 apprentices in the workshops, 17 were young Bengalis, nearly all of whom were Brahmins, and some of whom were sons of professional men. The Superintendent, Mr. Danby, is taking a great interest in them, by periodical examinations to test progress and otherwise. His rules of 24th September 1907 should be studied by parents and guardians. The Entrance Examination is the minimum qualification. The Chief Mechanical Engineer

of the Bengal-Nagpur Railway, Mr. A. S. Bailey informs me that the Company is ready to engage Indian apprentices. Under the Bengal-Nagpur Railway system the legal guardian of the apprentice is expected to execute an agreement of indemnity in case the apprentice in any way misconducts himself or leaves its service without permission. The Eastern Bengal State Railway issued in 1907 rules for the appointments of literate Indian apprentices. The minimum qualification is the second class of a higher English school, but preference, it was stated, would be given to those who possess higher educational qualifications. The Superintendent of the Samastipur Workshop of the Bengal and North-Western Railway informs me that he is unable to recruit Indians as apprentices, although he has frequently tried to persuade the youths of the middle class to take up mechanical engineering as a profession. Mr. Collin also proposed that each of the Railway workshops should take in a number of apprentices, and I repeat this recommendation for all the workshops over which Government has any control. At present the Calcutta Technical School gives theoretical instruction to a number of apprentices working with Messrs. Burn & Co., Jessop & Co., and others. And attendance at this night school is one of the conditions of apprenticeship in the case of certain Calcutta firms. The Bengal-Nagpur Railway Company and the East Indian Railway Company also insist on attendance at their night schools as one of the conditions of apprenticeship. Mr. Collin stated in his paragraph 59 that private firms did not hold a favourable opinion of the passed students of the Sibpur Engineering College as mechanical engineers. The same unfavourable opinion I find still exists, but the training in mechanical engineering at the college has advanced considerably within the last 18 years, and it is possible that the attitude of the students themselves to mechanical engineering as a profession is altering. But even so the practical training which can be given in a commercial workshop must be superior to that given in an academical institution in the case of those who desire to be master mechanics. I can only urge that guardians or others should allow and encourage young men of the country to make use of the opportunities which even now exist for apprenticeship in mechanical engineering.

CHAPTER V.

TECHNICAL SCHOLARSHIPS.

SECTION I.—STATE SCHOLARSHIPS.

Proposals of 1901.

PROPOSALS for the institution of State technical scholarships was one of the results of the Simla Educational Conference of 1901. It was proposed that selected candidates should be sent abroad to undertake definite courses of studies in subjects connected with industrial science and research, and that an allowance of one hundred pounds a year in addition to travelling expenses and fees should be granted for two years on an average. The Government of India proposed that two such scholarships should be allotted to Bengal. Local Governments were to be asked to consider what industries were of importance and which should be best encouraged by scholarships, particularly such industries in which native capital and native enterprise were likely to be engaged. It was added that it should be borne in mind that men who have received an expensive European training could be employed only upon such industries as were susceptible of being organised upon a considerable scale. The principles of the scheme met with the approval of the Secretary of State, and the proposed amount of the scholarship was subsequently fixed at one hundred and fifty pounds a year. It was suggested to the Government of Bengal that the mining industry would find a favourable field for the initiation of the experiment. The scheme was put in force in 1904, and eleven State scholars in mining engineering were selected in that year and in the three subsequent years,

and sent to Birmingham in England. Of these three have returned: Mr. H. C. Read is Manager of the Bhaskajari Colliery; Mr. S. C. De is unemployed as, for an apparent technical reason, he has not yet obtained an Indian certificate of competency; and Mr. P. K. Mazumdar joined the bar and gave up mining engineering, whereby the object of his selection by Government was nullified. At the end of 1907 it was determined to offer from 1908 and onwards one scholarship annually to each province. In calling for applications the principles summarised below were enunciated:—

Rules for future selection.

(a) That the students must have a competent knowledge of English or of the language of the country to which they may be sent.

(b) That Government will also be guided by considerations of the capacity and intelligence of applicants and of the practical interest shown by them in the industries selected, as also of the assurance which they may afford that they will continue to devote themselves to the industries selected on their return in India.

(c) That a scholar before being nominated should have received the best technical education available in the province in the particular industry which he proposes to study.

(d) That no age-limit would be fixed for the present.

The representatives of the mercantile and industrial communities were consulted as to the industry which should be primarily encouraged. The Government of Bengal decided in accordance with the opinion of the Bengal Chamber of Commerce that for the present at any rate the coal mining industry should be encouraged and after that the manufacture of leather. The 1908 scholarship has been allotted for the former, and an extra scholarship has been given for the latter industry. The opinions of those consulted varied considerably and included suggestions for the encouragement of power-loom weaving, sheet metal work, mechanical engineering, glass manufacture, chemical industries, paper and match manufacture. The letter of the Government of India of the 9th October 1902, presents a full consideration of the principles to be followed in the grant of such State technical scholarships and should be perused by those who think that Government is not doing enough in this direction.

The difficulty which Government have had in selecting candidates may be judged from the criticism of Mr. Chatterton, the Director of Technical Enquiries in Madras who stated that he had to reject all the applicants in 1905, because they were not in the least fitted to receive technical education. Most, he said, were carried away with the impression that they could spend a period of two years in an English country at the expense of Government on a stipend of a hundred and fifty pounds a year.

It is interesting in this connection to see what has been done in other provinces; for the current year 1908, the subjects selected have been:—

Madras	Textile chemistry.
Punjab	Textiles.
Bombay	(1) Chemistry of bleaching, dyeing and printing. (2) Mechanical and electrical engineering.

SECTION II.—PRIVATE SCHOLARSHIPS.

Schemes in Madras, Bombay and Bihar.

Within the last three years there has been a movement in all the provinces to enable students to proceed abroad to receive practical training in various industries. The National Fund and Industrial Association of Madras sent students to Japan for training in soap-making, match-making and other industries. In Bombay in the present year an Association called the Indian Industrial Development Scheme has been registered under Act XXI of 1860, for the purpose amongst others of sending Indian youths of promise abroad to complete their industrial training. In Bihar an

association for the educational and industrial advancement of the Biharis is in process of formation, one of the objects of which, it is understood, will be the provision of increased facilities to the youths of Bihar for receiving technical education in foreign countries, as well as in India; but nothing tangible has been done yet.

Scheme of the Scientific Association in Bengal.

The most ambitious scheme has, however, been launched in the province of Bengal. In 1904 the association entitled the Association for the Advancement of Scientific and Industrial Education of Indians was established. It receives pecuniary support from a large number of the leading men in Bengal, and is not without European subscribers. Under the articles of constitution one of the primary objects was to raise funds for the purpose of enabling properly qualified students to visit Europe, America, Japan and other countries for studying arts and industries. The association have sent abroad 16 students in 1905, and 40 in 1906. In 1907, 96 were selected and 79 in 1908. Scholarships were not given in all cases; in some cases the passage money and fees only. The following is an analysis of the subjects of study in the case of 82 who have proceeded abroad:—

Electrical engineering	6
Applied chemistry	5
Mechanical engineering	12
Pharmacy	2
Dyeing	4
Leather tanning	7
Agriculture	12
Ceramics	2
Cotton weaving	4
Hosiery	1
Sericulture	5
Match making	2
Pencil making	6
Soap manufacture	2
Printing ink manufacture	1
Button manufacture	2
Tobacco manufacture	1
Rubber manufacture	2
Dentistry	1
Enamelling	1
Watch making	1
Horticulture	1
Umbrella making	2

This variety of selection is interesting, as it shows the industries which Indian opinion thinks can be capable of local development.

Present employment of former stipend-holders.

It is also interesting to study the subsequent histories of the fifteen stipend-holders who have returned to India:—

Mr. K. C. Nandi, B.A., B.E., studied electrical engineering under Messrs. Telford, Grier and Mackay in England. It is unfortunate that he has not been able to put his special training to any account as he is now the District Engineer of Bogra.

Mr. G. C. Sen, M.A., B.L., F.C.S., returned after a training in dyeing in Leeds and in Germany. He proposed to work with a new joint-stock firm called the Bengal Dye Works, Limited, with a capital of one lakh. It was proposed to use up-to-date methods, employing indigenous materials. But the negotiations fell through, as some members of the syndicate wished to work the dye works as a branch of the Bengal Lakshmi Cotton Mills. This is unfortunate, as the commercial prospects of indigenous manufacture of dyed materials seem to be very hopeful. Mr. G. C. Sen is still without employment.

Mr. B. A. Taher, B.A., studied leather tanning and manufacturing in America. He has been appointed under the Boot and Equipment Company at Agra in the United Provinces. This took over the old Steuart Factory at Agra. Most of the Directors are connected with Bengal.

Mr. I. B. D. Mazumdar, B.A., M.SC., after studying agriculture at Cornell University has been appointed Agricultural Director of the Cooch Behar State.

Mr. M. C. Roy studied sericulture in Japan and is seeking for employment.

Mr. M. M. Chuckerbutty also studied sericulture in Japan and is seeking for employment.

Mr. A. P Ghose and Mr. P. C. Roy studied the manufacture of matches in Japan and are at present employed in the Bande Mataram Match Factory, of 38 Russa Road, Calcutta, which is financed chiefly by Dr. Rash Behari Ghosh.

Kumar Amindra Narayan studied pencil making in Japan, and is now employed at Bimlipatam near Vizagapatam in the Madras Presidency.

Mr. J. P. Bose studied the manufacture of printing ink in Japan, and is now employed in Calcutta.

Mr. N. Mazumdar studied candle manufacture in Japan, and is now managing a candle factory in Dinajpur.

Mr. M. C. Sen studied button manufacture in Japan, but is no yet employed.

Mr. A. Mitter studied pencil manufacture in Japan, and proposes to start for himself.

Mr. J. K. Das Gupta, B.SC., M. I. C. E., studied mechanical engineering in Scotland, but is not yet employed.

Mr. S. Deb studied ceramics at Tokyo in Japan, and is now working as Works Manager of the Calcutta Porcelain Works, 45 Tangra Road, Calcutta.

The Association has on the whole reason to congratulate itself on these results. The *Pioneer* in reference to it has said that when *swadeshi*, divorced from recrimination and violence, spells sympathy and cooperation, it is one of the fairest flowers of Indian growth. It is essential, however, that stipend-holders should obtain genuine industrial employment on their return, each in his own special subject. The criticism has been made to me by competent observers that, as most of the stipend-holders have no large private means of their own, the scholarships should be larger and the funds available distributed amongst a smaller number. It is to be noted that of the 79 candidates selected for the present year, no fewer than 44 come from the Eastern Province. I think that the Association would be well advised in demanding that those who proceed to specialise should have a sound general education and that their knowledge of English should be more than passable.

Advantages and dangers.

The Association may well hope that the experience of the great Indian chemist, Dr. P. C. Roy, during a visit to Europe may not be repeated. He has stated that out of 250 Indians whom he met in England not a single one was devoting himself to the sciences or the technical arts. There is one incidental advantage which students who study abroad derive, and that is that the self-reliance and business habits which they are likely to acquire by their sojourn will stand them in good stead when they have to enter commercial life on their return to India. On the other hand, there is disquieting information regarding the pernicious influences to which Indian students are subjected, both in England and in America.

Scheme of the Guruprasanna Ghose scholarships.

The other important private scholarships in Bengal are those to be maintained out of the Guruprasanna Ghose's legacy of two and-a-half lakhs which was announced at the Convocation of the Calcutta University in March 1908. The scheme that has been approved is that each scholarship should be tenable for three years, that one selection should be made annually, and that the annual value be two thousand rupees

in Europe or America and one thousand rupees in Japan. Preference is to be given to Hindus. No particular industry has been prescribed, but each candidate is to set forth in detail the institution in which he proposes to study as also the particular branch of agriculture or the arts, science and industry of Europe, America or the East in which he desires to specialise.

District Board scholarships.

The total annual expenditure in the whole province by District Boards and Municipalities on scholarships in technical and industrial schools is less than Rs. 5,000—Rs. 177 from Municipalities and Rs. 4,794 from District Boards. The Nadia District Board assist some pupils of Hât Chapra School at the Kanchrapara workshops. The Jessore District Board gives scholarships tenable at the Apprentice Department, Sibpur, and at the Technical School, Khulna. The Burdwan Raj gives stipends tenable at the Burdwan Technical School. At the Bihar School of Engineering are scholarships granted by the Bihar District Boards—Patna, seven of Rs. 5; Gaya, two of Rs. 7; Shahabad, four of Rs. 5; Saran, eight of Rs. 7; Champaran and Muzaffarpur, two of Rs. 5; and Darbhanga, two of Rs. 10. Patna Municipality gives also two of Rs. 5. The District Board of Ranchi gives scholarships at the Ranchi Industrial School, at the Sibpur College and at the Kalimpong Lace School. The District Board of Cuttack gives a scholarship of Rs. 30 at Sibpur College, and one of Rs. 10 at the Calcutta School of Art.

CHAPTER VI.

CONCLUSIONS AND RECOMMENDATIONS.

Progressive expenditure.

INDIVIDUAL institutions have been considered; it now remains to sum up for the province. The distinction between technical and industrial institutions though possibly considered one of convention, should be retained. I first show statistics of the annual expenditure at different periods from which it will appear that the outlay on specialised education has been greater than is generally supposed.

Institutions.	Years.	Contributions from			
		Government.	District Boards.	Municipalities.	Private sources, including fees.
		Rs.	Rs.	Rs.	Rs.
Sibpur Civil Engineering College.	1890-91	60,888	...	...	11,499

* Excluding expenditure in the Eastern Bengal Province.

Changes in general education.

Now Government can, in the words of the Government of India resolution of the 28th June 1888, support technical education as an extension of general education

it can also promote and countenance technical education of a special character. For the former object, the compulsory teaching of drawing was introduced in Bengal in 1891 and 1901; and besides the University of Calcutta will have from 1909 for science students an Intermediate Science Examination corresponding to the First Examination in Arts, which has been divided into an Intermediate Examination in Arts and an Intermediate Examination in Science. Chapter XXVII of the Regulations of the University and section 21 of the Indian Universities Act show what measures have been taken to promote the improvement of the opportunities for practical study in chemistry and physics. As for education of a special character, it has been shown that the policy from 1891 has chiefly been to maintain the efficiency of the central institutions; the Engineering College and the School of Art. Let us see first what are the requirements of the province.

Men are required: (1) as managers, engineers, subordinates, draftsmen, surveyors, mechanics, estimators in the various forms of engineering—civil, mechanical, electrical and mining engineering—in Government and private employment. Men are also required: (2) as foreman overseers and managers in organized industries in Bengal, such as matches, soap, leather, etc., financed by the small capitalist. Now from the large literature—English, American and European—on the subject, I find that the leading principle is that each place must make arrangements to suit its own needs The following are, I think, the requirements of Bengal:— The requirements of Bengal.

(1) An engineering college proper, to teach civil, mechanical, electrical, mining and sanitary engineering. This should be Sibpur College in its present form, with the improvements which its enthusiastic Principal has suggested, though not on its present site. It has, I understand, been settled that the college will be removed to Ranchi. Engineering college.

(2) A technological institute, the nucleus of which should be the industrial and chemistry classes, which it has been proposed will be started at Sibpur. This institute should be in Calcutta itself and should be affiliated with the classes in chemistry and physics at the Presidency College, and with the textile instruction at the new Serampur Weaving Institute. The syllabus should be the same as that provided at the Victoria Jubilee Technical Institute at Bombay, or at the University of Leeds, in what is known as technical chemistry and should embrace the chemistry of leather and tanning, of the manufacture of commercial chemicals, and the chemistry of the processes required in the dyeing and printing of textiles, and in the manufacture of dyes, perfumes, soap, ceramics, varnishes and paints. The subject, however, has not yet been fully worked out in Bengal. The duplication of departments has to be avoided, and it has to be considered whether an institute for technology should be developed apart from, or in conjunction with, the Presidency College, where pure science as opposed to applied science is taught. Technological institute.

(3) So far for engineering and industrial chemistry; there is also required a central school of design. Mr. Collin proposed a school of drawing and design, for industrial purposes and the circulation of designs amongst native workmen. I do not propose a separate school of design, but recommend that the School of Art be brought more in touch with the industrial art of the province (its influence at present on indigenous art is imponderable), by the influence of the Principal, by the transfer of the Industrial Art Section of the Indian Museum to the School of Art, and by carrying out the proposals of the 1905 conference of the Principals of Schools of Art in preparing and circulating design books for workmen. On account of the fact that Calcutta must maintain an Imperial Museum for all India, the establishment of a separate Bengal provincial museum of industrial art, similar to those in Lahore, Lucknow and Madras, has been vetoed; but there is no reason why the Bengal School of Art should not fulfil the same function. School of Art.

As for the technical institutions, including classes affiliated to Sibpur, I advocate the following:—

(1) The Cuttack Survey School should be made into a school of engineering up to the sub-overseer standard; the amin's certificate given after one year's training should be abolished and only a surveyor's certificate given after the final survey Affiliated technical institutions.

standard examination at the end of a two years' course. There is no reason why at Cuttack an inefficient type of Bengali sub-overseers should be turned out as is done at present.

(2) The Bihar School of Engineering which at present teaches to the overseer standard, should be allowed to give practical instruction, so that the certificate of the qualification of upper subordinate could be granted; moreover, the amin's certificate should be abolished, and only a surveyor's certificate should be given after a two years' course in surveying.

(3) The Technical Schools at Midnapore and Burdwan should leave artisans alone, and should train youths up to the sub-overseer standard of Sibpur, on the condition that the passing of the Entrance Examination be the minimum qualification in general education.

(4) My own feeling is that the system of bifurcation known as B classes should be dropped entirely. It is stated in Mr. Hornell's report (page 102) to be a failure in Bengal. The object of Government in giving a "taste for an industrial career" is frustrated by the parents or guardians. All that happens at present is that boys join them for the same object as others join the sub-overseer classes, hoping to obtain the same qualification ultimately with a smaller stock of brains. This affects the classes at Patna, Bhagalpur, Ranchi, Midnapore, Burdwan and Khulna.

(5) On the other hand, I propose that the B class of Bhagalpur, the arrangements for which are almost a farce in connection with the zillah school, be changed into a proper technical school, teaching to the sub-overseer standard, and be financed and managed by Government instead of by the District Board. It should be a model school.

(6) Among the unaffiliated technical schools are those managed by the railway companies, and the Calcutta Technical School. The latter has a niche of its own in the framework of technical education. As a night school for those who are apprentices in factories in or near Calcutta, it should be assisted. Among railways the theoretical training of apprentices, who are to be the future foremen and heads of departments, is recognized. The State Railway Workshop at Kanchrapara was specifically mentioned in 1890 by Mr. Collin; but no system similar to that at Kharagpur, Lillooah or Jamalpur is yet in existence there. The best scheme, in my opinion, is that at Lillooah: it recognizes that the theoretical training should not be given at night after recognized working hours, but should be given within the Railway Company's hours. Two hours, twice a week in the mornings, do not interfere much with workshop practice. The syllabus at these three railway centres is fairly uniform and gives what is wanted.

(7) The other important private technical institutions are the Bengal Technical Institute and the technical department of the Bengal National College. The former at present does not desire affiliation, and independence is part of the creed of the latter. There is quite enough room for the Bengal Technical Institute; it should be placed by its supporters on a sound financial foundation. It is at present a composite institution for instruction in engineering and chemistry, and does not furnish the same temptation to the Bengali youth to aspire to service as sub-overseers or overseers under Government or *quasi*-Government departments, as the Government college does, and therefore it opens out a direct avenue to industrial employment.

Industrial schools.

The future of industrial schools is a difficult problem. As has been indicated in the first chapter, an industrial school is one dealing with the improvement of the artisan. There is: (1) the school for centralized industries growing in importance, and (2) the school in large stations and municipal towns, where there is a demand, which will repay those who acquire in local industrial schools superior skill (Government of India Resolution of 1888); there is also, (3) the school proposed, for local handicrafts, half-time primary and half-time industrial, with apprenticeship under approved artisans (Government of India Resolution of 1903). It has been shown in the Summary in Chapter I that the proceedings of the Bengal Government of 1904 ended in the scheme for the improvement of weaving in Bengal. The committee of 1904 resolved to take no action

regarding large manufacturing centres and did not press the system of half-time schools. In only two divisions has any attempt been made to put that system into practice: in Chota Nagpur, principally in the Hazaribagh district by Mr. Radice, who was a member of the Industrial Education Committee and is now the Deputy Commissioner; and in Patna division, where the only outcome of a prolonged discussion was the subsidizing of an existing school attached to a railway workshop. It seems to me that there is room for each kind of school in different localities; and that it is inexpedient to dogmatise about the comparative merits of the "class" system or the "apprentice" system.

Misconceptions concerning Industrial Education.

Let me first clear away some misconceptions. One is that manual instruction is industrial education. I am afraid that many in Bengal, both pupils and teachers entertain this belief. Manual education is now-a-days held in Europe to be part of a liberal education; it is the training of the hand and eye. One of the objects of the free use of manual instruction through the curriculum of the Bengal National College is to overcome the traditional prejudice amongst certain classes against manual labour. Manual instruction is used in certain Missionary schools in the hope, not always realized, that the boys, who do not belong to the artisan castes, will earn a living afterwards in a handicraft. But in neither case is it really industrial education. Another misconception exists as to the principles and objects of the half-time system; notwithstanding the fact that the Government of India in 1901 said that they attached great value to the dissociation of technical from ordinary literary education. Another misconception is that it is assumed that the employers of subordinate Indian labour are satisfied with manual dexterity in their journeymen. It is a fact, I find, that many employers have not given special attention to the improvement of the intelligence of their journeymen, but many have stated to me that a journeyman who could work the first four rules of arithmetic in English figures and who could make and understand simple drawings would be a more useful workman than one who has not this knowledge. Paragraph 66 of Mr. Collin's report shows that in 1890 employers, while admitting the benefits of a course of theoretical training, did not appear to have felt the absence of it, that they looked for practical training only, and were satisfied if they obtained that. But since 1890 a change has come across the attitude of employers in Europe.

Schools for centralised industries.

(1) As for the school attached to a centralised industry, the best example in the province is the Beniadih School of the East Indian Railway Colliery Workshops which have been described in section II of Chapter III. Literary education is kept apart, as the upper primary standard is the qualification for admission. It realises what the Indian Government said in 1888:—"To the Government railway workshops and factories may undoubtedly with great advantage be attached schools of drawing and design and of practical instruction in the scientific principles of the handicrafts there carried on." Now at Beniadih mechanical drawing is taught, and also simple mechanics and mensuration. It has just received the unqualified approval of the newly-appointed Chief Inspector of Mines, Mr. J. Wilson.

The advantages are—

(i) a commercial atmosphere;

(ii) teaching and discipline under European control; and

(iii) an assured livelihood.

I have asked the superintendents of the large workshops of the Bengal Iron and Steel Works at Barakar, of the East Indian Railway Carriage and Wagon Works at Lillooah, and of the Canal Workshops of the Public Works Department at Dehri-on-Sone and at Midnapore to consider this. The young artisan gets a small money-wage in proportion to his skill. In the words of paragraph 10 of the Resolution of 1904, it is necessary to enlist the active co-operation of employers of labour: the principle applies to the training of journeymen, as well as to the training of apprentices of the foreman type. My proposal for this co-operation is that, if a large employer of labour will maintain a school attached to his workshop, on the lines of the Beniadih school,

Government should assist by paying for the teacher up to Rs. 60 a month. The principle that under certain conditions Government would pay for a teacher was enunciated in Government Order No. 2584 of the 30th July 1904 in connection with the Khulna school. If we had a provincial inspector of industrial schools, he would, I am sure, have several such schools in working order. At present the Beniadih school suffers from unnecessary inspection by subordinate eductional officers, who do not understand its object. I think that no industrial school should be inspected by an officer under the status of an Inspector of Schools, and possibly in time such schools may cease altogether to be under the Education Department.

Schools in large towns.

(2) The next kind of school is an industrial school in large stations and municipal towns, where there is a demand which will repay those who acquire superior skill. In Bengal such schools have sprung up under no system. Apart from Missionary schools, for example, those at Hatohapra, Chaibassa and Ballyganj, which supply a demand for good material, but unfortunately not a demand from the Indian community, there is no genuine school of this kind in the province, except that at Khulna. The Khulna school is miscalled a technical school. It gives an improved knowledge of carpentry to boys of the artisan castes, and its chief defect is that the boys leave to earn their livelihood before they have learnt enough, partly owing to proverty, partly owing to short-sighted policy on the part of their parents. Outside the metropolitan area and away from the vicinity of large workshops, it is not possible to have the commercial atmosphere. But the next best thing is that the work to be taught should be that kind for which there is a remunerative local demand, if it be done well. Some officers desire a graduated syllabus for this form of instruction. It is acknowledged that a training of three or four years is required, and something definite for each year is demanded by the non-expert inspecting officer. In my opinion a too elaborate syllabus defeats its own object. Mr. Ward, the Superintendent of the East Indian Collieries says that to ask a boy to attend to fires in a blacksmith shop for a whole year is to damp any spark of enthusiasm the boy may have, while Mr. Heaton, the Principal of Sibpur, says that the best training is to make the boys proceed from simple articles to more difficult articles, and that it is impracticable to ask a boy to spend a whole year on one operation such as planing. In this connection I note that it is impossible to give practical training of any value, unless articles are made which are meant to be sold, otherwise boys will leave with knowledge neither of the cost of materials nor of market rates. I have not yet come across any institution in which progressive and methodical training was sacrified to the necessity of showing a profit, as the Government Resolution of 1903 foreboded. In fact either from want of business methods, or from the fear of the above imputation, the work is all the other way; as commercial undertakings, the schools are carried on at a loss. The theory that industrial schools should be primarily educational and not commercial enterprises is accepted without cavil; and has no objectors; but it was never intended to mean that nothing must be produced for sale. In fact the Resolution of 1903 has recorded that it is wholesome that schools should be brought to the test of producing saleable articles.

In this class of school, the pupils cannot afford to pay fees: they have to be supported either by a Mission or some local body. I think the industrial section of the Khulna school under the Khulna District Board is a good example for imitation. The conditions should be: (*a*) the pupil should be of the artisan caste; (*b*) no literary education should be given: the pupils should have reached the lower primary standard, and in the more advanced districts the upper primary standard, but simple mensuration and drawing should be taught; (*c*) Government should provide the salary of a teacher-superintendant, or preferably a passed foreman mechanic, up to Rs. 60; (*d*) the pupil should be maintained by progressive stipends at Rs. 1, 2, 3, and 4, per month respectively in each of the four years; (*e*) to prevent pupils leaving too soon, they should receive at the end of the period, but not before, a certificate of competency, and in cash the total of the credits which should be placed opposite their names, month by month, in accordance with their work; and (*f*) in all cases the District Engineer should be a member of the board of management.

I think that if Government paid for the teacher, as proposed above, other District Boards would start similar schools for carpentry and blacksmithy work. The Government School at Ranchi should be worked on the conditions above mentioned. A similar Government school at Muzaffarpore should be started; and the District Boards of Cuttack, Gaya and Champaran should start similar schools for carpentry alone at Cuttack, Gaya and Bettiah, and the District Board of Birbhum at Suri for blacksmithy

Half-time industrial primary schools.

(3) The half-time industrial primary school was suggested as a type for the whole of India, in the hope that a "practical beginning" might be made. Although I think that some little good has been done in the attempts made in the Chota Nagpur areas, yet it must be admitted that Bengal is one province, at least, in which the attempt to add literary to a practical education will fail. To add practical to a literary education is another matter; this is being done. The proposal is "that the boys should spend half the day at the primary school, and the other half on working as registered apprentices under approved artisans, who would receive a monetary reward for each apprentice on the conditions: (*i*) that they taught them the trade thoroughly, and not merely the elementary processes; (*ii*) that they accepted supervision from a Government expert", while at the same time "scholarships for all the pupils would be provided." The crux is to find the approved artisan The artisan selected in many places is no better than the bazar *mistri*, and officers complain that money is being uselessly spent in pretending to teach just as much as would be learnt without any Government or District Board scheme. If a good local artisan teacher can be obtained, if some of the ex-pupils of the Ranchi school can be tempted to be teachers in these local schools and make the teaching a reality, then some good may be effected; but I should like to see the money of the local District Boards granted for scholarships only in places where these conditions prevail. Elsewhere, as so many have said, the large workshops of Bengal are the real industrial schools, and in this province the dissociation of technical from literary training mentioned in Sir John Hewett's letter of 1901, should be recognised. The chief advance which should be made should be in making all reasonably possible use of such workshops and in obtaining the co-operation of the employers. And this can be effectively done rather by one officer, such as the proposed Superintendent of Industries, who can act personally, than by a department through correspondence.

Subsidies to private schools.

As will be seen in Appendix II, there are several private schools, either philanthropic or Missionary, which provide a training in a handicraft. My advice to them has been that the chief test of their efficiency is whether the ex-pupils keep up as a means of livelihood the crafts which they have learnt. Applications come from these schools for assistance; and the schools are treated as special schools under rule 17 of the Grant-in-aid Rules. The criterion of these schools is not a literary one; and in the past the Director has frequently had to apply to the Principal of Sibpur College for his expert opinion. There is also in the Department no separate grant for the aid of industrial schools; all grants are debited to the Grant-in-aid Fund, on which there are already heavy claims. It would be more satisfactory in order to avoid delay and circumlocution, if the new Inspector of Industrial Schools received a lump grant, similar to that given to the Inspector of European Schools, and distributed it in accordance with the results of his personal inspections. It is in accordance with the declared policy of Government to assist such institutions when they further or develop a local industry when it appears to be capable of expansion by the application of superior methods and implements.

It must be recollected that the advance movement in England dates from 1884, only twenty-four years ago; and that much of the expenditure in that country has not come from the public exchequer, but from local bodies (Report on Technical Education in Great Britain, Chapter VIII of Report of the United States Commissioner of Labour, 1902); that in America the advance was due, in a great measure, to private benefactions, with "a great variety of organization and practice and a marked impression of the personal element" (Address of Sir William Preece on Technical Education in America, *Journal of the Society of Arts*, 10th April 1908); and

that in Germany the advance was due in some measure to the education and opportunities for research study provided by the Universities (Industrial Education, by Sir Philip Magnus, 1888, page 215). But in India generally, and in Bengal particularly, the circumstances are different. It is Government from whom the initiative is expected, and the Government purse from which funds are provided. That being so, it is sound that expenditure by Government should primarily be on the central institutions; and secondarily in co-operation with the large industrial concerns in the improvement of apprentices and journeymen. On the other hand, I doubt very much whether a complete system of village industrial schools is either practicable or desirable throughout all the divisions of Bengal, but any industrial schools which are under private management should be encouraged, if they pass the test of producing intelligent artisans, who will follow the trades which are taught to them.

REVIEW OF THE INDUSTRIAL POSITION AND PROSPECTS IN BENGAL IN 1908 WITH SPECIAL REFERENCE TO THE INDUSTRIAL SURVEY OF 1890.

(PART II OF SPECIAL REPORT.)

CHAPTER I.

INTRODUCTORY.

Classification of industries.

THE subject of technical education is discussed in a separate review. It is difficult to arrange the industries of the province of Bengal in groups which will not overlap; but the following division, adopted by a distinguished expert in industrial training, is fairly logical:—(1) those involving the use of extensive machinery; (2) those mainly requiring the use of hand tools; (3) those dependent on artistic skill; and (4) agriculture in all its branches. To this list may be added the mining industries. Another expert in Indian manufactures makes the division of—(1) manufactures proper; (2) manipulation or preparation of agricultural, forest or animal produce; and (3) utilisation of minerals. We can have the following groups:—(1) factory industries, (2) mining industries, (3) handicrafts, (4) industrial arts, and (5) industries dealing with economic products. These will be considered in turn; and it is proposed to treat in detail the indigenous manufacturing industries and the indigenous industrial arts. Manufacturing industries cover both factory industries and cottage handicrafts. It is desired to indicate the nature of existing obstacles to development, the possibility of development, and the measures which Government may legitimately take to remove obstacles, or facilitate development. Special investigation has been made in the case of weaving, leather work, brass work and glass making. It is intended also in this review to bring up to date the report on the arts and industries of Bengal, prepared by Mr. E. W. Collin, I.C.S. in 1890, under the instructions of the Government of India issued for all the provinces in 1888.

Continuous development.

Twenty years have elapsed since 1888, and now in the newspapers, in magazine articles and in the addresses of Indian publicists it is stated that the country is on the eve of an extensive industrial development. Although fresh factors have been brought into operation within the last two years, yet it will be found that there has been a continuous development. The material condition of the people was reviewed in 1892 and again in 1902. In the former year it was found that, while silk manufactures and hand-loom weaving were decaying, there had been a "redistribution rather than destruction of wealth," and that the manufactures of Bengal were "more valuable than they were in days when her silks and muslins held every market in Europe." By 1902 it was stated that there had been an outburst of manufacturing and mining activity, which was converting the metropolitan districts into a vast industrial tract; and even at that time Mr. Shirres, who prepared the memorandum, was able to point to the growth of an industrial middle class. The following figures are sufficiently striking. Within twenty years jute mills have increased from 12 to 42: cotton mills from 6 to 13: the coal output from under two million tons to over ten million tons: the mica output from under 100 tons to over 1,000 tons. The greater part of this development has been due to European capital and enterprise, while the trend of the present movement is for the outlay of Indian capital and the exercise of Indian management. The outlay of capital implies the power of combination and the risking of reserve funds for industrial purposes, and management implies technical skill and business capacity. There is and has been for the last six years a desire amongst the educated classes to take to industrial enterprises—a desire not unconnected with the blocking by competition of the traditional avenues of livelihood on literary lines. The history of the Indian Industrial Association of Calcutta shows that its promoters were in advance of public opinion in 1893. Those therefore who now earnestly desire this industrial development must continue to call upon their countrymen to use their latent capital, either individually or collectively; and to acquire skill in technique and business management.

Present requirements.

One of the chief requisites in Bengal for the development of indigenous industrial enterprise—or "honest *swadeshi*"—is the appointment of a whole-time expert officer of Government, one possessing primarily engineering and scientific qualifications, and secondarily a knowledge of local conditions, sympathy and acquaintance with business methods. The Bengal Government have taken steps to obtain such an officer. He would be able to give disinterested advice to those who wish to take up industrial enterprises and to exert continuous personal pressure to put into effect the recommendations of Mr. Collin, almost all of which still hold good, and any other recommendations which Government may accept. The next requisite is patience. There is an impatience to achieve in a single year results for which decades would not be too short.

CHAPTER II.

FACTORY INDUSTRIES AND HANDICRAFTS.

SECTION (1)—GENERAL REVIEW OF FACTORY INDUSTRIES.

Government factories.

THE factories requiring extensive machinery, most of which are worked by European capital and under European supervision, are principally those in the vicinity of Calcutta on both sides of the Hooghly. Government is itself in Bengal a large employer of labour and a manufacturer on a large scale: of arms at Ichapore, of ammunition at Dum-Dum, of shells at Cossipore and Ichapore, of railway plant at Kanchrapara, Balliaghata, Sealdah and Chitpur, of steamers at Kidderpore, of clothing at Alipur, of telegraph stores at Bhawanipore, of opium and opium boxes at Patna, and of canal stores at Dehri-on-Sone, Midnapore, Cuttack and Calcutta.

Private factories.

It is not realised what an enormous variety of industrial activity exists at present in Bengal, with part of which Indian capital might be more associated than it is. The Department of Commercial Intelligence takes as a standard for statistical purposes any factory which employs 50 workmen or more. Even on this standard we find the totals for Bengal in 1905 as tabulated in the Financial and Commercial Statistics of British India for 1907, under many diverse heads.

I.—*Textiles.*

Ginning mills	2
Cotton mills	10
Jute mills	37
Jute presses	22
Rope works	3
Silk filatures	42

II.—*Minerals.*

Coal mines	246
Iron ore mines	6
Mica mines	205
Mica splitting factories	3
Saltpetre refineries	2
Iron and brass foundries	35

III.—*Transport.*

Dockyards	6
Railway workshops	22
Tramway works	1

IV.—*Miscellaneous.*

Bone crushing	2
Cement works	1
Chemical works	2

IV.—*Miscellaneous (continued.)*

Brewery	1
Dairy Farm	1
Flour mills	4
Ice and aerated water factories	4
Sugar factories	7
Gas works	1
Indigo factories	106
Kerosene tin works	4
Lac factories	34
Oil mills	9
Paper works	3
Pottery works	1
Printing presses	22
Soap factory	1
Tanneries	2
Tile factories	3
Miscellaneous private factories	27
Government factories	18

Factories within the metropolitan area.

On the east of the Hooghly is the 24-Parganas district and Calcutta, on the west the Hooghly and Howrah districts. These constitute the metropolitan area. I give below the distribution of private factories within that area in 1906-1907, taking the same standard. There are, of course, many others which employ less than fifty work people.

In 24-Parganas such factories are:— Lac 2, paper 2, ice 3, soap 1, sugar 1, silk 1, saltpetre 1, stone 1, gas 1, rope 2, flour 1, dairy farm 1, coach-building 1, tannery 1, tramway workshops 3, dockyards 2, iron and brass foundries 13, oil mills 2, oil depôts 3, jute 33, cotton 6, jute presses 11, municipal workshop 1, electric supply 1, chemicals 1.

In Calcutta itself, there are:—Municipal workshops 2, Port Commissioners' workshops 2, ice 1, foundries 5, jute press 2, lac 1, printing presses 21, coach-building 2, electric supply 1, cabinetmaking 1, wood works 1.

In Howrah district there are the following:—Jute 9, rope 3, jute presses 7, engineering works and foundries 9, docks 4, flour 4, cotton 6, railway workshops 3, printing 1, salt 1, lime 1, bone 1, paint 1, oil 1.

And in Hooghly district there are:—Brick-making 11, jute 6, cotton 1, chemicals 1, bone 1, surki 31.

Factories beyond the metropolitan area.

Outside Calcutta and its neighbourhood we find comparatively little industrial enterprise which is not connected with agriculture. I give an analysis on the same standard of fifty work-people per factory.

PRESIDENCY DIVISION.

Murshidabad District.—Silk 30.

Jessore District.—Sugar 1.

Nadia District.—Silk 1.

BURDWAN DIVISION.

Burdwan District.—Oil 1, brass 1, weaving 3, pottery 1, paper 1, iron 1, tanning extracts 1, railway workshop 1.

Birbhum District.—Railway workshops 2, silk 3.

Bankura District.—Brass 1.

Midnapur District.—Silk 2, railway workshop 1.

ORISSA DIVISION.

Cuttack District.—Tannery 1, printing presses 2.

CHOTA NAGPUR DIVISION.

Ranchi District.—Lac 7.
Manbhum District.—Lac 44.
Hazaribagh District.—Railway workshop 1, Lac 2.

BHAGALPUR DIVISION.

Monghyr District.—Railway workshop 1, brick-making 1.
Darjeeling District.—Railway workshop 1.
Sonthal Parganas.—Lac 2, brick-making 1.

PATNA DIVISION.

Patna District.—Oil and flour 5, darris 1, hides 1.
Gaya District.—Railway workshop 1, lac 3.
Shahabad District—Sugar mill 1, tiles and bobbins 1.
Saran District.—Saltpetre 1, sugar 2, railway workshop 1.
Champaran District.—Sugar 3.
Muzaffarpur District.—Engineering 2, sugar 2.
Darbhanga District.—Railway workshop 1, sugar 1.

This distribution gives, however, no idea of the extent of the lac industry, for instance. Only seven large factories are shown above in the whole of the Chota Nagpur Division, whereas there are no fewer than 82 small factories in Manbhum district alone. Nor does it give a fair idea of the brass industry in North Midnapore, where some capitalists employ 150 to 300 men. The tendency of the district staff, who prepare the returns of important industries, is, I find, to assume that an "important industry" must use mechanical power.

European enterprise.

Many of the factories in and around Calcutta are those described in Mr. Collin's report as European industries. It is not realised what an enormous amount of European capital is invested in industrial enterprises in Bengal. Take the case of jute; the capital invested in buildings and plant on the banks of the Hooghly is £12,000,000 sterling; and employment is given to 200,000 native operatives, whose wages amount to £3,000,000 or four and a half crores of rupees a year. In the districts too, European capital has within recent years started large factories such as the sugar factory of India Development Limited, at Otter in Muzaffarpur district, and the new factory of the Peninsular Tobacco Co., which is under erection at Monghyr. If, however, there is to be any really indigenous industrial development in the province, Indian capital must come forward, whether in joint-stock enterprise or through the small capitalist. A commendable beginning has been made, but an examination of the registration of joint-stock companies will show that Bengal is far behind Bombay in the inauguration of purely indigenous industrial concerns. Bombay provided 49 per cent. of the total nominal capital in 1906-07, and Bengal 24 per cent. In Bengal in 1907-08 there were 60 companies registered with a paid up capital of 13¾ lakhs, but coal companies accounted for more than half of the number and 12½ lakhs of the capital. Indigenous joint-stock enterprise is still in its infancy in Bengal; and the transactions are characterised by an almost excessive, though prudent, amount of caution and shyness. For instance, the Bengal Laxmi Cotton Mills, Limited, took over a working mill, the Laxmi Tulsi Cotton Mills, at Serampore; and the Bengal Hosiery Company, Limited, are taking over the works of the old Kidderpore Hosiery Factory. There have been some interesting developments of joint-stock enterprise for banks and insurance companies, which are so far hopeful signs. But the capital for these new enterprises is not coming from the large capitalists, but from the savings of the middle class. It is the opinion of a leading native merchant that it is much easier to make money by an agency in imported goods, than by investment in industrial enterprise. The large capitalist has still to be persuaded that he can get a good return for his money in manufacture rather than in zamindari or agency, or money lending. There are two good examples in Calcutta of successful indigenous enterprise: the Calcutta Pottery Works, and the Bengal Chemical and Pharmaceutical Works. These are financed by

Indian capital, and managed by Indian brains, which have had a scientific training. These are only nominally companies; they are really private syndicates. These works are commended as good examples of what is required. The essentials are a sufficiently large capital, scientific management, sufficient supply of raw materials, and a remunerative market which is capable of expansion. It is, therefore, by the small capitalist or by small syndicates that progress may be made in the immediate future, either in new lines of business or by improved methods adapted to strictly indigenous work, as for example brass manufacture. The joint-stock company is essential, but its growth will be slow. The Hon'ble Mr. (now Sir Vithaldas Damodar) Thackersey in his presidential address at the Calcutta Industrial Conference of 1906, quoted with approval the words of Mr., (now Sir Thomas) Holland, the Director of the Geological Survey of India, who said that Indians will continue to pay an unnecessary and undesirable tax as long as those in the country who possess money will not risk their reserve fund for industrial purposes. Essentials for promotion of Indian enterprise.

Apart from the investment of capital, another essential for industrial developments is that the young men who study engineering at Sibpur and elsewhere should acquire more than a superficial knowledge of mechanical engineering. This is dealt with in my other report. In all factories where machine plant is used some knowledge of mechanical engineering is essential; and there is a splendid opening for the middle class youth as foremen if they will only take advantage of it. It is a common complaint of large employers that the Sibpur youth quickly forgets all that he has learned in the workshop. One leading engineering firm says that there is no employee available between a native tindal and a European foreman mechanic. As I have recorded elsewhere, the firms which are financed by European capital and organised under European management prefer to employ European foremen, inasmuch as force of character in managing factory hands is considered an essential as much as technical skill, but still the training at Sibpur contributes not a little to strengthen the character of the students, and it is to be hoped that they may yet wear down the prejudice that the Sibpur youth is afraid of hard work and not suitable for a responsible position, even though his workshop experience and theoretical training may have been of the best. I am glad to find that the East Indian Railway at the Lillooah workshops and the Eastern Bengal State Railway at Kanchrapara are giving every reasonable opportunity for advancement to the literate Indian apprentice. Mechanical engineering.

SECTION (2)—GENERAL REVIEW OF HANDICRAFTS.

While agriculture occupies over 72 per cent. of the population, the whole of those engaged in the "preparation and supply of material substances," according to the census of 1901, comes up only to 10 per cent; and amongst these, handloom cotton weavers, though the most important workers in indigenous industries, make up only 1·2 per cent; workers in precious metals, 0·4 per cent; potters and iron workers each 0·3 per cent. Hence we see what a small proportion of the population is included under the head of artisans. In 1881, the proportion of those engaged inindustrial pursuits was only 8·7 per cent. Mr. Collin stated in 1890 that except in wood work, brassware, mat work and common pottery, the Bengal manufactures had been almost entirely superseded by imports from Europe. In 1894 Mr. Trailokya Nath Mukharji stated in his monograph on brassware that this was perhaps the only important industry which had not suffered from competition. In the memorandum on the material condition of the people of Bengal, Mr. Shirres in 1902 confirmed this view. In Chapter XII on Occupations in the Census of 1901, Mr. Gait pointed out that detailed information as to the industrial organization of a country cannot be obtained by the machinery of the general census. In fact, the elaborate and costly occupation tables tended, he thought, to obscure the main facts which a less elaborate method would have brought out. At the same time it was remarked that there had been a decline in the number of workers in wool and cotton and that machine-made goods were gradually replacing those made by hand in the villages. The *swadeshi* movement of the past two years Indigenous handicrafts. Recent developments.

(1906 and 1907) is a new factor stimulating production and creating a demand. I find that this has led to the improvement of the weavers in parts of the Presidency and Burdwan Divisions: that is to say, many weavers who had given up their caste occupation have returned to it. The weavers, however, in the Orissa Division were on the one hand not so affected by the previous competition of imported cloth, and on the other hand not so affected by the revival in favour of country-made cloths. In Bhagalpur and Chota Nagpur Divisions, there is a strong element in the population which prefers the coarse country-made cloth, apart from, and previous to, any *swadeshi* movement. As for the brass industry, there are signs of a double movement—in the districts near Calcutta, the poor people buy the enamelled goods because they are cheap, while better class people are becoming a little ashamed of their previous election of the cheaper ware on the ground of cheapness, and there is a feeling that every Hindu who can afford it should purchase brass and bell-metal ware. The motive for the latter attitude is something more than a desire to encourage indigenous industrialism, and should be respected.

The comparative importance according to the census of 1901 in the leading handicrafts was as follows:—(1) weaving, (2) pottery, (3) carpentry, (4) mat-making, (5) leather manufacture, (6) iron manufacture. These same handicrafts were stated by Mr. Collin to be the principal indigenous industries in 1890. The report of the Industrial Committee, 1903 (Vol. 1, p. 87) recommends that all the above should be encouraged in Bengal. The committee appointed by the Bengal Government in 1904 recommended in particular that weaving should be developed. This will be discussed in the next chapter.

Improvement in indigenous handicrafts.

After six months special investigation, during which I have examined industries in twenty-six districts, it appears to me that what is now required is not the teaching of the existing methods in cottage industries, but the teaching of improved methods, and also the assistance of the educated upper-middle classes in a more organized system of production and distribution. Mechanical power, or in some cases, an improved adaptation of human power is required. An acute observer, representing the United States Government, has recently reported to Washington that the *swadeshi* movement must recognize that this is the age of machinery all over the world. The artisan must not be left to himself to obtain his raw materials, to produce an article, and then sell the completed product. Also I hold that industrial schools outside of a commercial atmosphere and without highly qualified teachers are futile, and that enthusiasm without money and business-like methods is vain.

CHAPTER III.

MANUFACTURING INDUSTRIES.

TEXTILE INDUSTRIES.

Cotton Spinning and Weaving.

Spinning mills.

The factory industry has increased considerably since 1890. There are now 14 mills, in nine of which spinning is done. More then half of these fourteen are backed by Indian capital. Mr. Collin said in 1890 that cotton spinning, except as a cottage industry, did not exist.

Bengal produces now only seven per cent. of the total production of spinning mills in India. The Bengal climate appears to favour spinning, and spinning mills appear to have a chance in Bengal, because they can obtain cotton at a nominal freight by steamer from Bombay. The great difficulty is the want of skilled labour. The most recent figures show a falling off in yarns spun in Bengal:—April 1905 to March 1906, 51·2 million pounds; 1906-1907, 46·5 million pounds; 1907-1908, 41·8 million pounds. During 1907, the average dividend in one hundred selected Lancashire

companies was 15⅞ per cent., but for 1908 the outlook is not reassuring. In Bengal only two of the mills spin any yarn above 25s. As for factory weaving, it has received an impetus from the *swadeshi* movement. The Bengal Laxmi Cotton Mills started in 1906, and has a paid-up capital of 11⅜ lakhs. It declared a dividend for the last half of 1907 at the rate of 5 per cent. per annum; but it was admitted that the profit was comparatively less because the goods had to be sold at a much cheaper rate in order to encourage the industrial movement of the country. This is the only mill which weaves *dhoties*. It has passed through four sets of proprietors within ten years, and has over 26,000 ring spindles and 200 looms. There has been an increased local manufacture of T cloths, and there is a probability of further increased local manufacture. The woven goods produced in Bengal mills during the last three years have been as follows:—2·5 million yards in 1905-06, 5·8 million yards in 1906-07, and 7·9 million yards in 1907-08. The first figure is for *greys* alone, the latter two are for all woven goods. On the other hand, the imports of all cotton piece-goods into Calcutta were 1,171 million yards as the average of 1900-1905, 1,336 million yards in 1905-1906, and 1,160 million yards in 1906-1907. The decrease in 1906-1907 was greatest in *greys*. The imports of all cotton piece-goods have mounted up again in 1907-08 to 1,330 million yards, with a record value of 21⅜ crores of rupees. The position in Bengal shows that there is an opening for the extension of the textile industry more in the Indian market and less in the China and foreign markets, and for the weaving of fine goods.

Mill weaving.

Hand weaving.

The hand-loom weaving industry has existed, as Mr. Collin said in 1890, more or less in every district. The yearly accounts from 1892 were rather dispiriting. In the monograph for 1898, it was stated "that large numbers of weavers have abandoned their looms and have taken to other pursuits," or that the cotton weaving industry was in a decaying condition. In 1899 the industry was stated to be on the decline, but there was no change in the fine muslin of Golnagar and in the coarse cotton cloth in Orissa. By 1901 it was stated that the competition of European piece-goods was lowering the indigenous industry in the Burdwan, Presidency and Patna Divisions, but that the fly-shuttle loom was coming into use in the two former areas. In 1905 it was stated that the coarse country-made cloths were preferred in the Orissa and Chota Nagpur Divisions and in the Sonthal-Parganas. By 1906-1907, the industry had recovered. In Burdwan district there was an increase in outturn of one-half over that of the previous year. From Bankura there was an export trade. At Bolpur in Birbhum there was considerable manufacture. In Hooghly district the manufactures in Arambagh subdivision rose from 11 lakhs to 14 lakhs. In Howrah the mill outturn decreased; and the hand outturn increased. In Midnapore, Ghatal was the centre of weaving. In the 24-Parganas, the mill market was dull; the hand outturn smartened in Basirhat subdivion. In Jessore there was a considerable manufacture in both coarse and fine cloth; so also in Khulna. In Nadia coarse cloths, bed-sheets and towels were made at Kushtia, Meherpur and Shikarpur. Fine cloths with silk borders were made at Santipur for export. In Patna, both cotton and mixed fabrics were manufactured in Bihar. In Saran district, the *jolahas* wove a coarse cloth for winter use. There was some spinning in the Gopalganj subdivision. In Gaya, there was coarse cloth manufactured. In Darbhanga district there was the special *kokti* cloth woven near Madhubani, and *kanti* cloth at Bharwara and Pandaul. In Shahabad coarse cloth was woven all over the district. In Bhagalpur, coarse cloth was made, but an improvement in texture was made, so also in Monghyr. In the Sonthal Parganas, both *jolahas*, *tantis* and aboriginals did coarse weaving. At Kishanganj in Purnea district, *lungis* and *patanis* were made. Throughout Orissa and Chota Nagpur Divisions coarse cloths were woven, principally for local consumption. A comparison between this account and the earlier accounts shows what a revolution for the time being has been made in the industry by the new factor of an increased local demand. How far this factor will be permanent, it is impossible to say. The contrast is shortly as follows:—Country cloth will last over a year, and

imported cloth seven or eight months. The cost of the latter is Re. 0-11 to Re. 1-3, of the former Rs. 1-12 to Rs. 3-0.

Extensions of the Serampore pattern hand loom.

The subject of hand-loom weaving has given rise to much discussion since 1890. There is quite a literature on the subject; some of the leading pamphlets are quoted in the Appendix. In Bengal, as has been seen, from 1892 to 1902 there was nothing but decadence to record. From 1902 to 1905, the steps taken towards the improvement of the handloom weaving were made in the direction of introducing the Serampore pattern throughout Bengal. Mr. Collin had said in 1890 that the Serampore weavers used an improved hand-loom, and owed the vitality of their trade to that fact. Mr. Banerjei in his monograph of 1898 again called attention to this pattern, saying that it was a distinct improvement on the ordinary loom, in so far that it ed to a great deal of economy of labour. This was the old English fly-shuttle loom invented by John Kay and introduced more than fifty years in Serampore from Farasdanga (Chandernagore). No attempt had been previously made to introduce this loom outside Serampore.

Mr. Havell, the Principal of the School of Art, Calcutta, took up the matter in 1901. From that time, by lectures, letters and advertisements, Mr. Havell did a great public service in his efforts to extend the use of the Serampore fly-shuttle loom. Government circulated instructions and sketches; District Boards were importuned to send weavers for training at Serampore; a factory for the manufacture of Serampore looms was started at Chinsura, first under Ghosh, Chauduri & Co., then Ghosh, Palit & Co., then under Mr. P. N. De. The progress from year to year was summarised in the District Board reports, and Mr. Havell at one time was persuaded that 10,000 new looms were working; and in February 1908 was of the same opinion. An examination of the correspondence in many of the District Board offices discloses that there was too much amateur work; and recent enquiries show that the new form of loom, notwithstanding the impetus of the *swadeshi* movement, has not been sufficiently attractive to the working weaver. The reasons for the failure are many. The present attitude in the districts is not to worry any further about the fly-shuttle loom, on the ground that the attempts to popularize it have failed. Some who have been corresponding about the loom for years do not even know what a fly-shuttle is. The National Weaving School, which worked at No. 209, Cornwallis Street, Calcutta, is now closed. I was sorry to see lying idle in many places a number of frame looms of the Serampore pattern, which had been introduced by well-to-do people in several districts. I think a fresh start must be made in Bengal

Objections to the Serampore loom.

The fly-shuttle loom contains a string and lever mechanism for pushing the shuttle backwards and forwards across alternate sheddings of the warp threads, along the shuttle run; in the country loom the shuttle is passed by the hands of the weaver between the threads of the warp. I checked the picking in many places and found that it averaged 65 against 22 per minute in the country loom. The complaints were in different places (1) that the whole new frame loom was too expensive; (2) that the weaver had to sit on a bench instead of on the ground; (3) that the threads snapped; (4) that the wheels of the shuttle could not be repaired locally; (5) that the shuttle jumped out off the shuttle run; and (6) that sufficient work could not be prepared to keep up with the rate of weaving. I have given to this matter much personal enquiry and studied all the literature on the subject, and I think that some of the difficulties are due to avoidable causes, principally want of mechanical knowledge. What is wanted for the improvement of the individual weaver in Bengal is a cheap adaptation of the flying-shuttle mechanism to the country loom. The improved sley with the string-picking apparatus is the only essential part of the improved loom. The wooden frame-work and the raised seat are only copies of the original English loom. It is not necessary to give the ordinary weaver a stout wooden frame for his loom, or to ask him not to sit on the floor. The line of least resistance is required for dealing with the most conservative of Indian artisans. Mr Havell did, it is true, propose the adaptation of the fly-shuttle sley to the country loom at a cost of Rs. 7; but I do not think that the people in the districts realised its advantages

or that the suggested contrivance was mechanically perfect. A good adaptation is that proposed by Mr. Greenway, Supervisor of the Darbhanga District Board, at a cost of Rs. 6-11 (Government Circular No. 15T.M. of the 10th September 1906). The best adaptation which has come to my notice so far, is not the Bengal pattern, but the pit loom pattern of Mr. P. Theagaraya Chettiar in Madras, which costs complete Rs. 10. The Bengal pattern with some little devices could be made to swing more evenly, and could be made less costly. The shuttle box of the Bengal pattern is likely to jam the picker when it is first used. In fact the extension of such a pattern in Bengal was as much a mechanical problem as anything else. Moreover the Serampore men were accustomed to their English frame loom; they could teach "picking" on a duplicate loom, but they had no experience to teach the use of the adapted form of loom. Within recent years many patterns of hand looms have been publicly tried, at Calcutta in 1906, and at Madras in 1908. The last word on the subject is Mr. Chatterton's memorandum on the Madras weaving competition of 1908, in which he shows the advantages of Mr. D. C. Churchill's model of a pedal loom, th Sayaji Baroda loom, and of Mr. Maxwell's "Triumph" Salvation Army loom. It is necessary to indicate precisely what the problems are. First, the problem of assisting the weaver in his old individualistic ways is one thing; for that, the cheapest form of mechanism which will give an increased outturn is required. This will give an increased power of production. Secondly, the problem of applying generally human labour to work looms is another. This depends upon whether there is a market for the hand product, and whether it can compete successfully with the machine product. But even if those conditions are satisfied, this is not enough. Organised capital is required. The capitalist can either finance the weavers in their own homes in an existing weaver colony, and distribute their goods for them; or he can in a similar colony economise by bringing the weavers and their wives and children to work under one roof, in the manner in which the new Madras handloom factories are working. A factory does not necessarily connote mechanical power, or unhygienic surroundings. The Madras handloom factories were a revelation to me. Hence in Bengal, the capitalist can either go in for power factories or for simple financing, or for organized hand-power factories. For the last two, he should work at known weaving centres, like Serampur, Bishnupur, Santipur, Bhagalpur, Bihar, Madhubani, and so on. The capitalist should get the most efficient form of human-power loom possible even though it be expensive. Care should be taken to avoid one error: it is of no avail to teach weaving to those outside the weaver castes in a place where there is no demand for the goods.

Problems handloom weaving.

Development of hand loom weaving.

What has happened in Bengal is that in parts of Jessore district and most of Howrah district, in the Sadar and Serampur subdivisions, but not in the Arambagh subdivision of the Hooghly district, and in the Raniganj side of the Burdwan district, the Serampur pattern of hand loom has extended. But I believe that it was due more to intercommunication among the people themselves than to official efforts to popularize the Serampur fly-shuttle loom. On the other hand, the ordinary weaver throughout the Burdwan and Presidency Divisions has, whether a fly-shuttle worker or not, received a special demand for his wares on account of the movement in favour of local manufactures. And yet I found Serampur weavers themselves wearing by preference and for the sake of cheapness imported cloths, although they are the most prosperous among the weaving population, earning up to Rs. 25 and 30 a month. Improvements are also required in the preliminary warping and sizing. The Serampur weavers have adopted, in the formation of the warp, a simple labour-saving appliance by which 100 threads can be laid simultaneously instead of one or two. An Arrah zamindar has a machine for the same object, though unnecessarily complicated. I do not think that the efficiency of the Bengal method of sizing could be improved upon; but it is time-consuming. The proceedings of the All-India Weaving Conference of Madras showed that there is much to learn under these heads, and the improved methods adopted at the Madras hand-weaving factories could be followed in Bengal. There is room for a complete division of labour

between warpers and weavers. The Patent List of 1907 show five applications or specifications filed by Bengali inventors for improvements in hand looms or hand spinning wheels.

Proposed Government weaving institute.

The proposals for the Government Central Weaving Institute at Serampur have been detailed in page 8 of my other report. At present we await the arrival of the two experts whose appointments have been sanctioned. I think that their course of action should be, first to study the literature on the subject, then to study the actual indigenous looms in the districts, and then to consider the problem of how to improve the mechanical efficiency of the native looms in Bengal by small improvements, or the desirability of adopting any of the patterns used in other parts, and also the possibility of saving the labour in the preliminary processes. In other words the objects to be kept in view should be the same as those announced by Mr. Chatterton for the Government factory at Salem in the Madras Presidency—experiment as well as instruction. For the present I am arranging to test the Madras pit loom pattern in three districts, Sambulpur, Bankura, and Darbhanga, and the Inspector-General of Prisons has kindly agreed to replace some of his old looms by the Salvation Army loom and the Churchill loom, and to test their suitability in Bengal. The efficiency of the Serampur looms is greatly increased by the addition of an automatic take-up motion which conduces to evenness of weaving. This has been successfully done by Suresh Chandra Sarkar of Raipur in Birbhum district. The proposed weaving institute and capitalist organization would in time achieve the reforms proposed in the Bengal Monograph on Cotton. Dr. Forbes Watson, the great textile expert, once said that the weaver had no regular system or method of doing business. Mr. Banerjei suggested in his monograph that weavers in the backward district should visit the large weaving centres, and learn to improve the quality and design of their fabrics. He advocated also exhibitions; and the introduction of cheap hand machinery, especially the introduction of the improved hand looms of Serampore

Requirements in Bengal.

The memorandum issued by the Government of India on hand loom weaving in India in 1907, was circulated throughout Bengal. Opinions were collected from all districts, and they confirm my views that:—(1) a central experimental station is required; (2) the assistance of capitalists is wanted; (3) improvements on preliminary processes are necessary; (4) subdivision of labour must come; (5) exhibition are helpful; and (6) a simple really inexpensive adaptation of the fly-shuttle to the existing looms would be acceptable to the ordinary weaver, if he were convinced that it were remunerative. I do not propose co-operative credit societies for weavers, or industrial advances. Either the weaver should be tempted to improve his outturn by a simple device, or the work should be done on a big scale by capitalists, whereby weavers would be paid at piece-work rate for their outturn. Two separate solutions were proposed at the Madras conference; there is room I hold for each in Bengal. One was to make a good loom even though it be expensive and put it in the market where its own merits would tell; the other was to overcome the first objection of weavers to expense and intricacy and introduce a cheap and simple article.

Reeling and Weaving of Mulberry Silk.

Healthy cocoons.

This is the subject of an elaborate monograph by the well-known expert, the late Mr. N. G. Mukerji, who studied the subject for twenty years in the course of which he visited France and Italy. The industry covers the culture of the worm and the reeling of the silk; and also silk weaving. The former subject has been taken up by the Agricultural Department. The report of the committee appointed by Government in 1906 to enquire into the condition of the silk industry in Bengal should be read along with the monograph published in 1903. Those papers are of such a recent date that direct reference to them should be made by those interested in the subject. I give here only the conclusions. It is accepted that the present unsatisfactory conditions are due primarily to disease amongst the worms, and not to defects in reeling or manufacture, or to competition. Definite recomendations for the establishment of nurseries and for other remedial measures have been made, and

the Bengal Silk Committee have already taken steps for the propagation and distribution of good seed. The filatures are principally in the Murshidabad, Midnapore and Birbhum districts, and in the district of Malda and Rajshahi of the Eastern province, and are owned chiefly by the Bengal Silk Company, Ld., the Berhampore Silk Concern, the Rose Silk Filatures, and Messrs. Louis Payen and Co. The exports of raw silk were 47·4 lakhs average from 1901 to 1906, 55·1 lakhs in 1906-1907, and 46·9 lakhs in 1907-1908. The upward tendency has been noticeable since 1889. I was informed in Berhampore that what was required was an improved spinning machine in place of the native *ghai*.

Vicissitudes of silk weaving.

As regards silk weaving, I deal with mulberry silk weaving separately from *tussar* weaving and mixed silk weaving. Silk weaving still continues, as Mr. Collin noted, in Murshidabad, Birbhum and Midnapore districts. Mr. Mukerji pointed out in his monograph that while there has been a decline in the foreign export of woven silk, the manufacture of silk fabrics for country use continues as vigorously as ever; for, he said, "the whole rank and file of the Hindu population of Bengal have to use indigenous silks on certain occasions." This is a great advantage. Silk weavers, he also said, are "as a class far more prosperous than cotton weavers." I noticed also myself that the silk weavers seem to have more influential headmen; in fact Mr. Mukerji points out that the leading silk weavers have had the enterprise and influence to introduce improvements to their fellow craftsmen and to supervise colonies of weavers. On the other hand, the financiers of the cotton weavers are as a rule not master weavers; and have not improved the craft in the slightest.

Up till 1901 silk weaving had been declining in Murshidabad; from that date it improved. In Bankura district, there is export from Birsinghpur, Bankura and Bishnupur. At Bishnupur there is a weaver of great merit—Babu Lal Kit—whose weaving took one day for a cubit, and whose 12-foot *sari* sold at Rs. 32. There is a great demand from East Bengal for *cel* silk from Bishnupur. In Birbhum district there is silk weaving at Boswa and Palsa. In the Arambagh subdivision in Hooghly district, there are several centres of silk weaving. At Ballydewanganj in this subdivision, special cloths called "*urni*" and "*pagris*" have been made and exported to the United Provinces and the Panjab since the days of the Moghuls. There is little manufacture in Howrah and the 24-Parganas. In North Midnapore as much as 20,000 lbs. of silk is yearly manufactured. In Murshidabad district there are several well-known names, but they are rather silk merchants than manufacturers. They advertise extensively, and have a business-like connection with Calcutta firms, who put their goods in the market. In other districts principally *tussar* is woven.

The Bengal Silk Mills Company, Limited, at 11, Dhur's Bagan Lane, in Ultadanga, Calcutta is owned and managed by a Bombay Muhammadan gentleman, Mr. Ariff. He has a European works manager from Macclesfield. This firm is able to manufacture very fine silks for export all over India and Burma and is successful in producing an almost black dye. It is an object lesson to Bengali capitalists of what can be done by skill and capital. Mr Ariff informs me that he worked himself in his youth as a journeyman at every part of the processes. As Mr. Mukerji has said in the hand-book on sericulture: "skilled Indian labour guided by English enterprise can produce silks of European excellence and finish." I may mention that the Ecole Superieur de Commerce de Lyons receives pupils from foreign countries and teaches the entire silk business from the raising of the worm to designing, weaving and commercial methods.

As regards the hand loom weaving industry, the districts give pessimistic reports, but Mr. Mukerji gives reasons at page 63 of his monograph for thinking that the indigenous weaving industry is flourishing at present. My observation confirms this view. In Ghatal the cost of manufacture has increased on account of the increased price of the silk thread; it used to be Rs. 12 a seer; it had risen in 1908 to Rs. 22 a seer.

Present position of silk weaving industry.

The present position is that there is a full demand for local manufacture of the silk thread which is not exported and the silk producers have an increasing demand for export of the raw silk. I do not think that Government help is required in

mulberry silk weaving. At Berhampore an intelligent observer told me that the demand of silk was from people who could pay, and that the *svadeshi* movement did not therefore affect the weaving industry. At the same time the inroads of the Japanese imports should be watched. At a time when so much is said and written about the support of local industries, Bengali ladies of the better class are purchasing *saris* of Chinese silk manufactured in Japan and sold in Calcutta in preference to the Calcutta or the Benares product. The imports of Japanese silk into Calcutta was as follows in thousands of rupees:—

1902-03	1903-1904	1904-05	1905-06	1906-07
18	29	52	40	42

Tussar Silk Weaving.

Changes in the industry.

In Mr. Collin's account, this is described as prosperous. The details of distribution and of the methods of this industry is given in pages 103-138 of Mr. Mukerji's monograph. In 1898 it was recorded that the manufacture was decaying in the Burdwan Division; in 1900 that it was affected by the increased popularity of machine made goods; in 1903 that there was a decrease owing to the introduction of cheaper and finer cloths from Bombay, Japan and Assam; in 1905 there was a slight improvement in Burdwan, Manbhum and Bhagalpur districts, owing to the *svadeshi* movement. *Tussar* is worked also in the Hooghly, Midnapore, Birbhum, Bankura and the Sonthal Parganas districts; on the other hand, *tussar* cocoons are reared in the Singhbhum, Ranchi, Hazaribagh and Palamau districts; and in these no weaving is done, except perhaps a little in Singbhum district. For instance at Singbazar near Purulia I found that the weavers had to travel by rail and road to Chaibassa to get their cocoons.

Position of workers.

Like practically all the cotton weavers, the *tussar* silk weavers are in the hands of their *mahajans*; but they are probably a little better off, midway between cotton weavers and silk weavers. Mr. Mukerji after his special enquiry of 1904 said that the *tussar* silk industry was declining everywhere owing to *grasserie*, although the demand of *tussar* cloths was on the increase. The district officers did not agree with this conclusion. Mr. Mukerji states that the industry must under any circumstances be a precarious one and urges proposals for the improvement of the seed. This is for the Agricultural Department.

Requirement of the industry.

What the *tussar* weaving industry requires is a fly-shuttle mechanism for working *tussar*. I have tried several dodges myself, but have not been successful. Infructuous efforts to introduce fly-shuttle loom were made at Bhagalpur. One weaver of the Mourbhanj State, Bamdeb Uriya, is asserted to have succeeded; but I could not get this verified. The weavers of Kalipur Kodiya in Birbhum district succeeded only with a cotton warp and *tussar* weft. The complaint is that the reeds of the sley fray the threads of the warp. The remedy may be in a device in the loom, or in improved spinning. This is a problem for the new Government weaving institute to solve.

Mixed cotton and silk.

Under the head of *tussar*, can be considered *bafta* or mixed cloths. This is associated with Bhagalpur. A cotton *chadar* costs Re. 0-10 to Rs. 5 and lasts for two years; a *bafta chadar* costs Rs. 3-8 to Rs. 15, and lasts five to six years. In Champanagar I found that the *mahajans* were sweating the local craftsman; about eight annas was the labour return for four days work. In Bhagalpur itself the Bihar Trading Company under Kabir Ahmad Khan of Mujahidpur is doing good work in advertising and circulating samples, issuing new designs to the weavers, and in financing them without extortion. This is a method which the middle class capitalist might follow with advantage where there is any colony of weavers who are at present following individualistic methods of purchase of yarn and sale of material The Bihar Trading Company have customers in Bombay and Burma, in Bengal and the Deccan; and they have received orders from Europe. I sent several large samples to a leading, wholesale piece-goods merchant in London; but there was no demand there. From enquiries I believe that there may be a demand in Spain for this class of goods.

Woollen Goods and Blanket Market.

The position is the same as in 1890. The blanket weavers are principally to be found in the Bihar districts. The *gareri* colonies in Bengal have migrated from Bihar and the United Provinces. For instance those near Bankura came from Gaya district, those in Midnapore came from the Upper Provinces, those in Jessore came from Arrah. The centres from which most of the good exports are sent to Calcutta are Aurangabad in Gaya districts, and Jangipur sub-division of the Murshidabad district, where the blankets cost from seven to eight rupees each. In the Aurangabad sub-division of the Gaya district the industry is in a flourishing condition. The country-made blanket loses about one-third of its size during the wetting and rubbing process. The best blankets are those made from pure Punjab wool by up-to-date machinery under European supervision in Bhagalpur jail. The bullock transport during the South African war obtained some of these warm coverings from Bhagalpur jail. In Bankura I found that a single worker could turn out a blanket costing one rupee eight annas in a day and-a-half. His labour would be represented by five annas. The weavers usually own their own herds of sheep and do the shearing, scutching, rolling, spinning and weaving themselves. In the monograph of woollen fabrics in Bengal prepared by Mr. N. N. Banerjei (1899), detailed information is given regarding the processes of manufacture and in an appendix the distribution is given, thana by thana, of the industry throughout the province. The first suggestion for improvement is obviously that there should be improved breeding of the sheep which produce the wool, but the Bihar districts still wait any improvement in this direction. As regards the improvement in weaving itself, Mr. Banerjei stated that the country blanket was cheap, warm and durable and produced at a minimum expense and that, as the trade had no prospect of suffering from outside competition, it might well be allowed to remain untouched. I think, however, that in the production of the superior qualities, such as the 6′×7′ blanket costing from ten or twelve rupees and prepared in the Jangipur and Aurangabad sub-divisions, there is room for the small capitalists who might extend the market for finer qualities and introduce further variety of designs. I learnt that at Nabinagar in Gaya district the *gareri* can only dye red, yellow and brown, and for black they have to depend upon the naturally dark wool of the black sheep. Then again they have to depend for soft wool on the *phagun* cutting. They say that they would like to learn how to make soft blankets. If there were a superintendent of industries, he could arrange to have some men sent to Cawnpur for training. The ordinary *gareri* colonies, whom I found settled in Bengal, were happy, self-reliant and self-contained.

Origin of blanket weavers.

Possible improvements.

Carpet Weaving.

In Mr. Collin's report it was stated (paragraph 40) that carpets were made in Patna City, in Obra and Daudnagar in Gaya district, at Sasaram in Shahabad district and in Muzaffarpur district. No recommendations were made under this head. This industry was the subject of the monograph for 1905-06, to which, as it is a recent production, reference should be made by those interested in the subject. The industry does not flourish in Bengal proper, as the climate is not suitable for sheep rearing. The work is still carried on in the Patna Division in Patna, Gaya, Shahabad, Muzaffarpur and Champaran districts.

Industry in the Bihar districts.

Mr. N. G. Mukerji, the compiler of the monograph, has pointed out that it is very doubtful whether the industry would have lived at all in its higher branches, but for the encouragement given in jails. I find that in the following jails there is some work:—Arrah, Chapra, Motihari, Chaibassa, Purulia, Hazaribagh, Patna, Bhagalpur. The jails employ new thread, well-made forks, English shears and upright looms in nearly all cases.

The *kalins* and *galichas* are made by knotting in the warp, tuft by tuft, the material of the pattern: in *durris* and *shatrangis*, the pattern is woven in the loom. At Obra, in Gaya district, I found that the good workers were 20 men in four

families. The weavers make, as pot-boilers, cheap and nasty *durris*, called *asans*, which they sell at from one anna upwards. In these they earn as profit about 3½ annas per rupee. But they can make beautiful carpets, with delicate design, heavy pile, and indigenous colouring, at Rs. 8 or Rs. 8-8 per square yard. Very few except Europeans in South Bihar give them orders or pay them at this high rate. In their second-rate work they use aniline dyes because such dyes are cheap. What they require is publicity, both in Bihar and in Calcutta. In Calcutta they are judged by the fifth rate articles which they export. As they have no capital, they work on advances and are dilatory. Their daily earnings are two to four annas. If private speculators were to run the whole business, and placed their good workmanship in the market, there would be room for a good profit. In Sasaram, in Shahabad district, the *durri* weaver can earn Rs. 7 and the *kalin* weaver Rs. 12 a month. They are not very prosperous. In Champaran the cotton work is partly done from locally grown cotton. In Muzaffarpur the workers earn about Rs. 3 to Rs. 4 a month. At Sultanganj in Patna City, one Sain Mia, about twenty years ago, conceived the idea of using the ordinary country loom for the manufacture of *durris*. The *karga durri*, as it is called is now manufactured in large quantities. This is a rare instance of improvement in an industry owing to the ingenuity or enterprise of a worker. The weavers in Patna earn from Rs. 7 to Rs. 12 a month; but they have not been able to raise the selling price of their goods with the general rise of prices. The large *shatrangi* is dying out at that place.

Publicity required.

The invention of the karga durri.

Mr. Mukerji has several suggestions; but to my mind nothing much can be done, unless a capitalist works, for example, the whole of the Obra industry. At present the Gaya District Board and the local exhibitions give some assistance: much is due to the patronage of Europeans. The suggestions are as follows:—

Mr. Mukerji's recommendation.

(1) There should be show rooms at central places; (2) only the best materials should be used; (3) scholarships at the expense of wealthy zamindars should be given for the study of the superior methods at Bikanir, Mirzapur, Bhawalpur and Warangol; (4) only indigenous dyes should be used; (5) local enterprise should start factories, utilising men trained in jails; (6) the best jail methods should be employed; (7) advertisements and encouragement should be given at the local fairs. Mr. Jvala Pershad, who wrote the monograph for the United Provinces in 1907, pointed out the importance of fairs and exhibitions to take the place of the art of advertisement.

POTTERY AND EARTHENWARE.

No change in country pottery.

The potter is proverbially not particularly intelligent: he is parsimonious and self-centred. Hence much improvement cannot be expected from his class. The village manufacture of earthen utensils is much the same as it was in 1890. The works of Messrs. Burn & Co, at Raniganj, in Burdwan district, though employing over 1,100 workmen, have not had any appreciable affect on the work of the potter outside: the boys who are trained in modelling there work on as journeymen. The chief work of the firm is still the manufacture of bricks, tiles and drain-pipe of the annual value of about seven lakhs. Brick burning up to 800 million bricks, in the year, is a leading industry in the Serampore subdivision of Hooghly district. The pottery works at Kaliganj in Khulna, continue to enjoy popularity. A superior quality of water pots is made at Kanthalia, in Murshidabad district. There is a large export of pottery from the Ghatal subdivision in Midnapore district. In the Bihar districts, pottery is of importance in Sewan, Samastipur and Sasaram subdivisions. The pottery of Sasaram is flourishing; that of Sewan requires a more extensive market. In the south of Sasaram subdivision at Banjari is an up-to-date manufactory, run by electric power, where Messrs. Octavius, Steel & Co. manufacture earthen tiles and wooden bobbins. The industry is prosperous and capable of development. The manufacture of earthen vessels as ordinary household articles, is, of course, carried on everywhere. There is a special development in the manufacture of flower pots in the south of Calcutta. I have never seen finer firing than that of B. C. Pal & Sons, at 20, Diamond Harbour Road.

Manufacture of articles from china clay.

The chief development since Mr. Collin's report, is the manufacture of white porcelain from kaolin. Mr. Collin said the difficulty was to find the proper clay. Deposits of decomposed felspar or kaolin have been found at Mangalhat, between the Taljhari and Rajmahal railway stations in the Sonthal Parganas. This was worked privately in 1902-03, but not successfully. It has been taken up again with much success by the Calcutta Pottery Works, 45, Tangra Road, Calcutta, which are the result of the enterprise of Maharaja Manindra Chandra Nandi of Kasimbazar, and Babu Baikantha Nath Sen of Berhampore. This firm is a good example of what is required in Bengal for indigenous development. It has sufficient working capital; it has its own coal and its own raw material; it has a ceramic expert in Mr. S. Deb, who studied at the Higher Institute of Technology in Tokyo, Japan; it has up-to-date German and English machinery, and up-to-date furnaces with the best of Stourbridge fireclay bricks; it has found a local market, as well as an export market, in ink-pots, gallipots, insulators, cups, saucers and plates, and even dolls. It is a curious development to find in Calcutta, as the product of Indian labour, such a western product as a chinaware doll dressed in European clothes. I have shown the firm what are the white porcelain articles which are required by the Medical Store Department at Calcutta and the Pasteur Institute at Kasauli, and have placed the firm in touch with these departments. The firm might be able to manufacture according to these specifications. The Government departments named are willing to purchase locally if the quality and price do not compare unfavourably with the imported articles.

Others have taken up the manufacture of kaolin. The works of the Bengal Pottery Works, Limited, are at Baranagar and the show-room is at 20, Cornwallis Street. This company has only Rs. 5,000 paid up out of Rs. 20,000 advanced capital, and suffers accordingly. A factory which has only six workman cannot be expected to do very much. Cups, saucers and small china ornaments are made, but I regret to have to say that the workmanship is extremely bad. This firm gets its supply of clay material from the Calcutta Pottery Works and its glazing material from abroad. The work was started by Babu Satya Charan Bose, who is now the managing agent. Another small attempt is the Eureka Porcelain Works, started at Giridih by Mr. M. N. Dutt, under the patronage of Mr. Justice Sharfuddin. Mr. Dutt had first-hand knowledge of such work in South-East China. The material is obtained from Garanji, 36 miles from Giridih, discovered in 1903. Both these enterprises, however require futher outlay of capital, and a defined market for their goods.

Glazing now possible in Bengal.

Kaolin has also been found in the Orissa Garjats, and in Belaur in Gaya district. It is also called china clay. Sir Thomas Holland, F.R.S., the Director of the Geological Survey, was good enough at my request to depute Mr. Murray Stuart of the Geological Survey to examine locally these kaolin deposits. The experience of the Calcutta Pottery Works is very hopeful for the future of this real *swadeshi* industry. The chief thing is that Mr. Deb has succeeded in producing a glaze. Bengal has previously not had the skill or the appliances for the special form of vitrification required. Sir William O'Shaughnessy as long ago as 1839 investigated the question of the production in India of glazed pottery, sufficient for use in Indian hospitals. He used lime-borate. It would be useful and probably economical if the felspar glazing in the up-to-date kilns of the Calcutta Pottery Works could produce locally an article, which at present has to be imported by scientific departments Mr. Collin in 1890 wrote that the potters of Bengal did not understand the art of glazing. The difficulty in Bengal is to find clay which will be sufficiently free from iron. Mr. T. N. Mukharji in his Monograph on Pottery in Bengal in 1895 wrote that glazing was all but unknown. In fact, in Bengal, pottery is almost entirely terra cotta, that is, plain unglazed ware.

The kind of articles manufactured and the methods of manufacture are described at pages 5 to 9 of the above monograph. The best potters are those on the banks of the Bhagirathi in the Burdwan district, where the clay is specially suited. The only suggestion I have for indigenous manufacture is the extension in the Bihar districts of the form of potter's wheel used in parts of Bengal. The Bihar wheel, the ancient "rota," is solid; the

improved Bengali wheel has a heavy periphery attached by spokes to the central hub. The latter is mechanically more efficient.

The import trade

The imports of earthenware and porcelain have risen in the last five years from 9½ lakhs to 14½ lakhs, and the feature of the trade is the increase from Germany and Austro-Hungary and the decrease from Belgium. The United Kingdom supplies over a third of the total.

CARPENTRY.

Decline of the Hindu carpenter in Bengal.

Carpenters are found scattered all over the province, and, except in the case of cabinet and furniture making, carpentry is not a centralized industry. There has not been much change in the disposition of the workmen throughout the province since 1890. There has, however, been a change in the character of the work and in the class of workmen. In Calcutta, Hindu carpenters formerly were in the ascendency; but, owing to the fact that youths of the younger generation are frequently not apprenticed to the trade, but encouraged to be clerks, the Hindu carpenters are giving place to Muhammadan and Chinese carpenters. I find the same complaint from a large private employer like Messrs. Lazarus and Company, as well as from a large Government workshop like the Kidderpore Dock-yard. Mr. John Wallace, the editor of *Indian Textile Journal* in a recent article in *Cassier's Magazine* on the industrial regeneration of India has mentioned that the chief faults of the Indian carpenter are his neglect of accurate measurement, his carelessness with regard to the efficiency of his tools, and his lack of perception of the value of time as a factor in the execution of work. This fault of unpunctuality, I may note, is attributed specially to the carpenter in the people's proverbs. The carpenter's saw, Mr. Wallace adds, is in such a bad order that he cuts tenons as a rule with a mallet and chisel, and his ignorance of gauges renders him unable to make even twenty articles exactly alike; also the carpenter rarely knows what size of nail or screw is required on a given job, whilst his screw is always too small. The carpenter has to be taught to measure accurately, to use sharp tools, and to cut to the mark. In Calcutta under European supervision the workmen of Messrs. Lazarus and Company conform to these axioms and the firm of the Chatterjee Furnishing Company, 52-7, Bowbazar, have an equally high standard, but much of the ordinary bazar work is scamped. There is apparently no inducement for the ordinary worker to follow a high standard. A good carpenter can earn in Calcutta from ten annas to one rupee a day, and on piece-work a good man might earn even as much as Rs. 40 a month. As regards the quality of the work, it is, of course, a question of cost; it depends upon how much people are willing to pay for good articles. At Dinapore the quality of the furniture mentioned by Mr. Collin is still good and the prices are reasonable, but not cheap. At Ghatal I found plain rough carpentry, which was just what was desired and what the people were willing to purchase. Mr. Collin pointed out that the supply of improved tools and the supply of designs were two essentials for improvement. I find that the workmen appreciate good tools when they can afford to pay for them. And the country-made rope bit is as efficient for ordinary work as the more expensive English bit turned by means of a bitstock. The native lathe with its double rope ends should, however, be supplanted by a rope pulley which would work continuously when driven by a large wooden wheel. This kind is to be found outside Bengal, in Cawnpore and in Madras. As for design, much improvement has been made by Europeans in the Bihar districts; they have retained carpenters whom they cause to copy designs and turn out articles with high finish. In Madhupur near the town of Monghyr I found a carpenter who worked from an old catalogue of Messrs. Lazarus and Company, and a catalogue of an English wholesale furniture manufacturer. His work was apparently appreciated by well-to-do Indians. He is bringing up his boy in his business. In a decentralised industry it is difficult to introduce the leaven which will leaven the whole lump. I have, however, suggested in my report on industrial education that there should be good schools of carpentry at Cuttack, Gaya and Bettiah, but the difficulty is to obtain instructors who will be superior to the bazar *mistri*. But I have found that there are carpenters with a high

degree of skill in Cuttack and in the Bihar districts, and such could be recruited if the pay were sufficiently attractive. It must be remembered, however, that it is the work-shops under European control which are the real centres of technical instruction. But the men trained in such workshops remain as a rule with their employers, and consequently do not extend their training to their countrymen. Carpentry is the most common form of industrial employment taught by the Missionary agencies. The best results are those obtained by the Oxford Mission Industrial School at Ballyganj in Calcutta and the Hatchapra Church Missionary Society Industrial School at Hatchapra in the Nadia district. The youths trained at these schools are encouraged to earn their livelihood at the craft. Much good can be done by the insistence on the teaching of drawing to scale in all industrial schools. As Mr. Nathan has remarked in his review of the progress of education in India (1898-1902), it is a poor testimony to the efficiency of industrial schools in Bengal that, although carpentry is the principal object of instruction, the native carpenter of Calcutta does not hold his own against his Chinese rival. The Hon'ble Mr. F. A. Larmour in the Bengal Council on the 4th April 1908, stated that the Bengali carpenter gets small wages, but that he earns for his employer even less than he gets, that he takes little or no interest in his work, and if not carefully watched will scamp his job. So the Hon'ble Member emphasized the necessity for some system of training that will improve the status of the Indian mechanic.

Real centres of instruction.

This trade furnishes a good opening for middle class capitalists outside Calcutta. They should have some machine plant driven by mechanical power, such as a band saw, planing and morticing machines; they should make use of the services of existing carpenter *mistris* in places like Burdwan, Cuttack, Gaya, Monghyr, Bettiah, Muzaffarpur; they should insist on good quality and should advertise, as the successful shops in Bowbazar, Calcutta, have done. But a master-carpenter should also have skill and knowledge, which is best acquired by the unpalatable drudgery of a regular apprenticeship. I have tried without success to get middle class youths apprenticed to the carpentry trade.

Suitable sites and methods for development.

MAT-MAKING AND BASKET WARE.

The details given in paragraph 22 of Mr. Collin's report still hold good. If there has been any change, it is in the improved exports in the Kishanganj sub-division of the Purnea district, by the opening of the Barsoi Extension. Mats and palm-leaf braids are manufactured at Falta and Diamond Harbour in the 24-Parganas district and are exported to Calcutta for sale. There is some centralised mat-making in Jessore district, Nuddea district, Sitamarhi sub-division and throughout Orissa. The industry in the Sabang and Panskura thanas of Midnapore district gives employment to about a thousand workers; as much as one thousand to two thousand rupees is paid on each *hât* day at each of the four recognised local markets. There have been increased exports, but the profits have not correspondingly increased on account of the increase in the prices of jute string and of the *mundari* reels. The industry is a flourishing one. The workers have a steady cash market close to their own homes. There are four leading dealers who export goods to Postabazar in Calcutta. The workers told me that they were quite ready to adopt new designs, but they asked what pecuniary benefit this would be to them. Mr. Collin suggested in paragraph 78 that this was one of the special home industries which might be assisted by the establishment of classes, and he specially suggested the above mentioned localities in South Midnapore. He said, however, that the subject was one perhaps for private enterprise. I agree with Mr. Collin that there is no reason why India should not export a large quantity of fancy and useful basket ware. But I do not think that we can do more than call the attention of private enterprise to the possibility in this direction.

An opening for private enterprise.

CURING, TANNING AND LEATHER WORK.

In 1890, Mr. Collin drew attention to the curing of leather in a few factories in Calcutta, and to the small manufacturing work done in Calcutta, Patna and Darbhanga.

Changes since 1890.

Since then, there have been phenomenal exports of hides and skins from Bengal. There was till 1907 an extraordinary world demand for leather, and so the Indian market was exploited to the full. Motor cars, change of taste in boot leather, and the boom in the cotton industry, all contributed as causes. In December 1906, an expert called attention to the scarcity of hides. In 1907 there has been a strong reaction.

Exports. The exports from Calcutta are instructive:—

	1900-1905. Average.	1905-06.	1906-07.	1907-08.
Raw hides	311	448	554	380
Raw skins	192	327	255	176
	503	775	809	556 lakhs.

The prohibitive rates against tanned goods on the Continent and America prevent any export. England is the only country to which there is an export of tanned goods.

Imports. The imports of boots and shoes from abroad into Calcutta were as follows:—

1902-03.	1903-04.	1904-05.	1905-06.	1906-07.	1907-08.
9·01	9·56	12·86	10·93	6·41	9·40 lakhs.

The "boycott" movement contributed to the fall in 1906-07. The imports of leather other than boots and shoes consist of unwrought leather, saddlery and harness, and other sorts. There was a decrease in imported saddlery also:—

IMPORTS (IN LAKHS) OF—	1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
Unwrought leather ...	2·66	2·08	2·20	2·21	2·42
Saddlery	2·13	2·35	2·19	1·94	1·67
Other Sorts	2·94	3·36	3·23	3·24	3·34

The present moment is propitious in Bengal for the increased local manufacture of leather goods for local consumption, not for export; and this consumption includes both country shoes and shoes of European pattern.

Special enquiry directed by Government in 1907. The committee appointed by the Government of Bengal in 1904 to consider industrial education in Bengal, resolved that the fact that there was a large export of uncured hides should be brought to the notice of Government, so that enquiries might be instituted. In consequence of this Mr. E. R. Watson, M.A., F. C. S., Indian Educational Service, has recently prepared two valuable reports in connection with the leather industry, one concerning the curing, the other concerning the tanning of hides. These reports have been circulated to many associations and individuals who are likely to be interested in the industry. These reports are full and suggestive. I give below my own views.

Curing of hides. As regards curing, Mr. Watson's proposals are two-fold, to give publicity to the artificial state of the Calcutta hide trade, in which the advantage to the seller is almost in favour of badly cured hides, and to set a good example by starting a demonstration curing department under Government auspices. For the first object the Calcutta hide merchants are to be asked through the Bengal Chamber of Commerce to form an association of hide buyers. This I think should be done; such an association would be analogous to the associations recognised by the Bengal Chamber of Commerce (see page 95, Report of 1906, Vol. I), such as the Jute Fabrics Shippers' Association and so on. Still the

proposal has been mooted before without success, and all the hide buyers are not enthusiastic. And next, the principal associations of tanners in Europe and America, it is proposed, should be addressed in order that the requirements of the tanning trade might be more carefully attended to by the collecting and distributing trade. On this I would suggest that the Bengal Chamber of Commerce might be requested to make this reference, rather than that Government should do so itself.

As regards a demonstration department at Tangra on the east of Calcutta, which would be the means of the second object—to show the correct method of curing—I think that this is feasible; but I suggest that it would be better if the actual work of buying, curing and selling were done by a private firm with the help and under the advice of the expert appointed by Government. I have sounded the firm who have the lease of the *bhagar* under the Cossipore-Chitpur Municipality. Sheikh Nabi Buksh was a sorter for Messrs. Thomson, Lehzen & Co., and Munshi Ramzan Ali, his brother, was a buyer for Messrs. Cohn Brothers and Fuchs. These are practical men. I suggest, as Mr. Watson does, that Government should acquire a site, and erect sheds, and appoint and pay a superintendent; but that an agreement should be made with this firm, that they should try and sell, but that the flaying and curing should be done under the advice of a Government superintendent. The methods proposed by Mr. Watson could be adopted; to flay without scoring, and to cure with Madras sea salt. The firm have told me that they would work under these conditions. Mr. Watson thinks no butcher or *chamar* would allow a Government instructor to interfere in the curing of hides, which were the butcher's or *chamar's* own property. Perhaps not in the case of small men; but these men are not small men. The advantage is, if the scheme could be worked, that the proof of commercial success is at once apparent, whereas if Government financed the buying and selling, it might be not so practical a demonstration. If Tangra be not considered a suitable site, it might be possible to start such a demonstration curing department at a local centre of the hide trade, such as Patna.

After further personal enquiries in Darbhanga district, I do not favour the proposal of Mr. Watson to start a hide collecting agency in the north of Darbhanga district directly under Government control. The improvement in curing, I consider, must be made by the insistence on a better cure by the large firms acting through their mufassal agencies. Messrs. Schröder, Smidt and Company have improved curing in this way, and Messrs. Ralli Brothers, who have recently taken up Muzaffarpur district, might do the same. It is a matter which concerns the self-interest of the exporters. The Collector of Customs has reported that during 1907-08 there were complaints on the part of German and Austro-Hungarian tanners regarding the systematic manner in which some Calcutta trade shippers have been lowering the standard of their assortments.

Tanning of hides.

Turning now to the tanning of hides, I find that Mr. Watson's recommendation completely tally with the results of my own enquiries. There has always been some tanning done in Calcutta and the suburbs—perhaps up to five lakhs a year. The oldest firm is Messrs. J. Teil and Co., of Kidderpore. There are four places outside of Calcutta where tanning has been taken up in recent years. Mr. Madhu Sudan Das, C.I.E., has the Utkal Tannery at Cuttack, which has a retail depôt in College Street, Calcutta. He gets the hides principally from the Orissa Tributary States, has a German tanning expert, and a English practical boot-maker from Messrs. Cooper, Allen & Co., Cawnpore, and lately was turning out about 400 or 500 pairs a month. Mr. Bipra Das Pal Chaudhuri, who has in other things shown enterprise in advance of his countrymen, has a small factory at Maheshgunj, Nadia district, with a local agency at 7, Mirzapur Street, Calcutta; has as manager, Babu Sisir Bose, who studied for a time under Mr. Chatterton in Madras; and makes a speciality of chrome-tanning. Dr. Nil Ratna Sircar has the National Tannery,—a small chrome-tanning business, near No. 4 Bridge, in Beliaghatta, with a retail shop at 66-2, Harrison Road. This place is to be used as a training ground for students of the Bengal Technical Institute. All these three gentlemen are directors of a new Boot and Equipment Factory Company, Limited, which has been started at Agra in the United Provinces by amalgamation with the Steuart Factory Company of Pandit Mohan Krishna

Dhar. It was at first proposed that the new company should acquire the factories at Cuttack and Maheshganj, but this idea has been since dropped. This company have engaged Mr. P. A. Taher, B.A., a young Muhammadan of Hooghly district, who has had a specialised training on tanning and leather work in America. It would therefore appear that the advice of Mr. Watson, namely, to make known the desirability of establishing tanneries in Bengal, would be taken if it were published. At Bankura, Ranchi and Muzaffarpur I have suggested to local people that there is a hopeful future for tanneries and factories if they be started where there are (1) a hide market, (2) a supply of the raw material for tanning, (3) good water, (4) a cheap supply of labour and (5) local colony of *chamars* or *muchis*. At the same time I fully recognise the prejudices which must necessarily exist amongst the Hindu community against this industry. And my efforts to bring capitalist and expert together, for instance, at Bankura, have not been so far successful. But I fully approve Mr. Watson's recommendations that the Government of India should be asked to establish a branch Army Supply Harness and Saddlery Factory in Bengal, that the establishment of local tanneries be encouraged, that the patronage of the Bengal Government, say for example, in foot-wear for constables and warders, should be given to local factories, and that scholarships be given by Government to youths desirous of studying at Madras or at Cawnpore, or, I would add, of going abroad under the auspices of the Association for the Advancement of Scientific and Industrial Education of Indians. For such scholarships I would suggest Rs. 50 a month, for two years at Cawnpore, or for one year at Madras; and Rs. 50 a month for two years in Europe or America.

Requisite for tanning in Bengal.

Tanning materials.

The difficulty about curing may right itself with the help of a little practical instruction from Government. But the chief difficulty about tanning is in the supply of a cheap and plentiful tanning material. The chief material used in Bengal and Upper India is the *babul* bark (*acacia arabica*). The Cawnpore manufacturers complain that they have to go further afield for their bark: the President of the Upper India Chamber of Commerce has suggested that the bark used in Madras known as the tanner's cassia (*cassia auriculata*) should be cultivated in Upper India. The myrobalan plant (*terminalia chebula*) is found in Chota Nagpur districts. An extract from the fruits is, prepared by the Bengal Tanners and Dyers Extract Co. of Raniganj and exported. The Nadia Tannery at Maheshganj uses myrobalan fruits and Madras bark, as well as chrome salts. The Cuttack tannery uses vegetable bark, and so do all the Calcutta tanners. Mr. Hooper, F.I.C., F.C.S., of the Indian Museum, suggests that in Bengal the Australian wattle bark (*acacia decurrens*) should be cultivated. *Babul* bark gives only 16 per cent. of tannin, while the *cassia auriculata* gives 23 per cent., *terminalia chebula* 28 per cent. and *acacia decurrens* 33 per cent. The present problem is, however, not the cultivation of tannin for export; the English and Continental tanners will not change their tanning agents readily. The problem is the tanning of some of the hides for local leather manufacture, and the simplest course is to increase the quantity of the tanning materials which are locally procurable. The *babul* tree unfortunately is destroyed after use, whereas the South Indian agent, the *cassia auriculata*, gives a perennial crop. Doctor McCann's Monograph on the Dyes and Tans of Bengal was prepared as long ago as 1883; neither that work nor Mr. Hooper's monograph of 1902 on tanning materials, nor the Bengal Monograph of 1904, Chapter VI on tanning materials, furnish the information which a practical tanner in Bengal wants, namely, a full and accurate account of the habitat of the *babul* and other local tanning agents. It is desirable that the Bengal Agricultural Department should make this enquiry, and should experiment in growing the trees which have been suggested. The Agricultural Ledger No. 9 of 1896 tells us that the *babul* is not a forest tree in Bengal, but a roadside and village tree.

Chrome-tanning.

As regards chrome-tanning, it is more independent of local conditions. The potassium chrome alum can be prepared by chemical manufactories in Bengal by the addition of sulphuric acid to a solution of potassium dechromate and by passing sulphur dioxide through the liquid. I visited the Government chrome-tannery in Madras. It has quite recently been enlarged, and those who wish to take up the industry,

should study there. Chrome-tanning is successful at the new Agra factory. Some good chrome-tanning was recently done in Muzaffarpur, and exhibited at the Bankipore Exhibition in January 1908. From all I can gather, there appears to be a good future for chrome-tanning in Bengal.

At Bankura I came across a colony of leather workers, who supplied work to A. C. Roy, of Faujdari Balakhana, Tiretta Bazar, Calcutta, under the name of the Bankura Boot and Shoe Factory. The leather they received from the Bengal Tannery, Chowson Tannery and other firms in Calcutta. This business might be better organised, and they could do better work if they possessed wooden or metal lasts on which to work. I suggested to them an inexpensive expedient to take the place of a metal last. There is also a good opening for a leather factory at Dumka, where the craftsmen have some enterprise.

Mr. Rowland Chandra, who wrote the Bengal Monograph in 1904 has several recommendations. His remarks at page 24-26 should be studied by capitalists and others interested in the subject. I am sorry to find that the existence of this monograph was not even known to one who was in charge of a Bengal tannery. Mr. Chandra suggested amongst other things that young men should study abroad. Six have been sent by the Scientific Association in Calcutta, and the industry was the second selection of the Bengal Government for the State technical scholarship in 1908.

IRON AND STEEL WORK.

Insignificance of indigenous work.

Iron and steel work is a subject of the Provincial Monograph prescribed for 1907. It was prepared by Mr. E. R. Watson, M.A., F.C.S., of the Indian Educational Service, and is still under issue. Mr. Watson has stated that the art of working in iron and steel in Bengal has from very remote times been indebted to the outside world for assistance, not only by ideas but by actual supervision and control of the workers by foreign experts, so that it becomes almost a question whether any part of the industry can be called indigenous. Machinery and engineering workshops are concentrated in Howrah and Calcutta. Iron foundries are in the same neighbourhood and in the Burdwan district. Practically all indigenous workers are Hindus, while the Mussalman workers in iron and steel are almost all confined to factories conducted on European lines. Mr. Watson's report is very full and interesting; and as it is quite up-to-date, those who desire detailed information, especially regarding statistics, should refer to it. As regards the outturn of indigenous work the country blacksmith is not capable of much improvement. He supplies cheap plain articles for which there is a local demand. A small beginning in improvement has been made by the extension of village schools in the Chota Nagpur districts, specially in Hazaribagh. At Jhalda in Manbhum district I found that the workers were capable of doing much better work than they were doing. They require an extended market for their manufactures. A small capitalist might do a good business there. I tried to interest a local capitalist in this work. They should be induced to take up the manufacture of knives and scissors, instead of sword-sticks, the export of which has been stopped.

Cutlery.

There has been, I think, an extension of the manufacture of cutlery since 1890. I found Prem Chand Mistri whom Mr. Collin visited, still working at Kanchannagar near Burdwan. He has shown his enterprise by obtaining a small size oil engine for working his lathes. He is bringing up his son to follow him, and some of his workmen have been able to start for themselves. There is also good cutlery made at Shaspur, thirty miles from Bishnupur in Bankura district. One Makhan Kamar has taken to the use of an iron pedal lathe on the model of the sewing machine. A good workman can earn up to one rupee a day. I found that the best cutlery was made from old cast-off English files. Babu N. M. Bose, an educated young man in Muzaffarpur, has taken up the manufacture of surgical cutlery. Bechu Mistri and his son of Jagadispur in Shahabad district turn out work of the highest quality. I find cutlery taken up specially in Birbhum, Bankura, 24-Parganas, Khulna and Nadia. Superior nut-crackers (*jantis*) are made in Jangipur subdivision in Murshidabad, and in Satkhira subdivision in Khulna. Messrs. Khan and Co., of Sookea's Street, Calcutta, have a high reputation.

This cutlery trade furnishes an opening for the small capitalist. Improved mechanical appliances for filing and polishing are required, and a system of distribution of the completed product at a central place is essential

Rice bowls. The figures regarding the import of rice bowls from the United Kingdom into Calcutta should afford reflection.

1902-03	1903-04	1904-05	1905-06	1906-07
7	7·9	8·6	8	8 lakhs.

These cast-iron rice bowls are universally used, yet not one is made in Bengal. The people prefer them to the old wrought iron *karahis*, which are also more expensive. Only one private attempt has to my knowledge been made in Bengal to manufacture these thin globular castings. The Principal of the Sibpur College, Mr. B. Heaton, suggests that the problem of making these thin castings in this country should be attempted to be solved by experiment in the workshop of the Sibpur College.

Steel trunks. The manufacture of steel trunks has become very popular within the last three or four years. It owed its birth in Patna six years ago to Muhammadans from Allahabad. Mansudan Brothers started the Bihar Trunk Works in 1904 at Bhagalpur; and a man who learnt the art in a Calcutta shop has started in Khagra, at Berhampore. Murshidabad district has four factories altogether. These small factories are doing well and the prices are cheaper than those of English-made goods. The Berhampore man has agencies both in Rampur Boalia and in Calcutta. Although the sheet metal has to be imported, yet this is an industry which might be taken up by small capitalists in the same way as has been done by the Berhampore man. He has good material, good workmanship and good distribution. The Arya Factory of 107, Machua Bazar Road, Calcutta, turns out good articles. Importers such as Messrs. Alexander Young and Company are now putting in the market ready-made corner pieces. This is a convenience as the machinery for stamping dies locally would be rather expensive. Manufacturers can obtain the plant for ridging the steel sheets from Messrs. T. Rhodes and Son of Wakefield, England. I found that neither the Patna nor the Bhagalpur manufacturers were reaching the market which exists at their own doors. A dealer at Madhubani in Darbhanga district was obtaining his goods from Allahabad. The reason was that the Patna goods were not sufficiently well finished. I advised the Bhagalpur firm to make their hinges and locks stronger. Another word of warning is that these manufacturers should resist the temptation to produce inferior articles. Since the industry started, some manufacturers have been using sheets of a 102-lbs to the bundle instead of 112.

Iron-safes. Another form of iron industry is open to the small capitalist, viz., the manufacture of iron-safes. There is one enterprising blacksmith in village Lohani, thana Kushtia, who since 1905 has been manufacturing iron-safes at a cost of fifty rupees to one hundred rupees. Messrs. Das and Company, Chitpur, have had for some time a reputation in this class of work.

Guns. Mr. Collin gave a full account of the manufacture of guns at Monghyr. The industry still thrives in Cossimbazar, Monghyr, so called after the Nawab who brought a carpenter from Delhi for making gun stocks, from which small beginning this gun industry arose. There used to be 22 shops, but there are now only 13. The annual outturn of guns and pistols rose from two thousand in 1890 to three thousand in 1897. At present the number manufactured annually is about eight hundred. It is really wonderful what fine results can be obtained by means of the crudest of methods and the simplest of appliances. The gunsmiths complained of loss of custom; but they appear to be sweated by the wholesale Indian firms in Calcutta, about six in number, who buy their guns at eight to ten rupees for a

single-barrel and fifteen to twenty rupees for a double-barrel gun. The guns made to order fetch higher values according to their quality. A single-barrel breech-loader costs locally thirty rupees, a double-barrel breech-loader fifty rupees. A good workman can earn as much as thirty rupees a month Sudarsan Mistry has sometimes as many as 20 workmen. Mr. Collin suggested that the gun barrels should be tested before they were sold and pointed out that there could have been no difficulty in testing them in the same way as the water tubes of boilers are tested. This suggestion, however, was not accepted by the then Commissioner of Bhagalpur on the ground that it would be a needless interference with the industry. But I may be permitted to point out that the workmen themselves asked that an inspector be appointed. However, it has not been brought into notice in recent years that the bursting of Monghyr barrels has been so marked as to necessitate Government interference. Similar guns, but inferior in quality, are made at Jhalda in Manbhum district. The Government rifle factory at Ichapur is silently effecting a revolution in the teaching of Indian workmen The most callow of labour material is being induced under skilled supervision and guidance to turn out the highest class of work in which accuracy is required.

Future progress in the manufacture of steel.

But the real future of the iron industry in Bengal depends upon the local manufacture of steel, and in Mr. Watson's words "the only pleasing side of the industry in this province is what we may call the 'modern industry,' namely, iron and steel work carried on in large works according to European methods" Mr. Watson proceeds to state:—"This industry is, of course, quite small, but it has developed very greatly within recent years, and its condition and future prospects appear very hopeful. And although there are only a few such, this province can boast of engineering works which in size and equipment compare very favourably with all but the largest works in England; and the Bengal Iron and Steel Works produce pig-iron in blast furnaces of the most up-to date pattern." In fact it is the only province in which pig-iron is produced. As regards the manufacture of steel it is a melancholy sight to see plant to the value of a hundred thousand pounds sterling lying idle at Barakar. In the case of the Bengal Iron and Steel Works a subsidy to the extent of Rs. 45,000 a year, was granted by the Secretary of State in 1903, coupled with the provision that the material sold to Government should be three per cent. under normal prices. But no definite standing order for material was given. Government, however, is prepared to subsidise the Tata Iron and Steel Co., which has arranged to start operations in Bengal at Kalimati on the Bengal Nagpur Railway, to the extent of a standing order of twenty thousand tons of steel per year for ten years. The latter firm selected its site in Bengal after making the most detailed scientific preliminary enquiries. The Bengal Iron and Steel Co. in 1903-1904 laid down plant for the outturn of twenty thousand tons of steel per year; but in two years the total amount of orders from Government was only for six hundred tons altogether, requiring no fewer than seventy rolling sections and representing less than three tons per order. It is a matter for regret that in the case of the local firm the good will of Goverment was not converted into a tangible standing order. As Mr. Watson has stated, the production of steel from country pig appears to be the advance which above all others is now required in the local industry. In the manufacture of pig-iron there is surely something wrong when Indian requirements are met by orders from England while the Bengal Iron and Steel Company have to seek a market outside of India in Australia. In 1906-07, 1,996 tons were sent abroad from Bengal, principally to Australia. The total production of pig at the works in that year was 39,246 tons. The proposed new works of the Tata Iron and Steel Company, at Kalimati are not noticed by Mr. Watson in his monograph. The works will have far reaching influences in Bengal. Coal in the Jherria field, iron in Gurumaishini in Mourbhanj, manganese and lime stone quarries in the Central Provinces have all been acquired. It is anticipated that at Kalimati will be prepared not only iron but steel joists and structural shapes, and all sizes and shapes of steel bars; and that within five years work will be available for 20,000 people. The meaning of this is apparent when it is stated that all the existing iron and steel and

engineering works in Bengal are estimated to give employment at present to only 40,000 men.

WORK IN BRASS, BELL METAL AND OTHER ALLOYS.

Stability of the industry.

This industry I have examined in considerable detail, and am able to say that there has been no decline; in fact it has, if anything, improved within the last ten years. Yet, although the industry is flourishing, I think much could be done in cheapening the cost of production. The monograph on brass was written by Mr. T. N. Mukharji in 1894. He gives an exhaustive list of places, showing the distribution of the industry throughout the province, and its concentration in the Burdwan Division Mr. Mukharji, who has retired for several years, and who was the main spring of the Indian Industrial Association, tells me that he had not time for much local enquiry, and compiled most of his monograph from district reports. He has, however, kept in touch with industrial matters, and his present views are therefore, of interest. These are:—(1) The industry is not on the decline. (2) The enamelled ware has not been an altogether successful competitor, owing to the defects of the ware, the *svadesh* movement, and the views of orthodox Hindus about the use of iron as well as to the fact that old brass ware has always a market value. (3) But the industry might have been developed further; the high price of copper was one of the obstacles. The following figures are instructive:—

	1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
Imports of enamelled ironware into Calcutta in lakhs.	1·38	4·15	3·59	3·26	3·10
Imports of wrought brass into Calcutta in lakhs.	2·00	1·60	1·53	2·05	2·03

I find that the district reports of 1894 reported a decline owing to the import and use of enamelled ware and other ware made of zinc and tin. In 1898, the rise in the cost of living had affected the outturn. There was a strong fillip to the manufacture in 1905, but early in 1907 the price of the raw materials, especially copper, led either to dull trade or to an increase in the prices of the local products.

The industry is of importance in the following places:—

Centres of manufacture.

Calcutta.—Kansaripara, Chitpur, Bhawanipur.
Burdwan.—Kamarpara (Boopas), Dainhat, Purbasthali, Matiari.
Bankura.—Bankura, Bishnupur, Patrasayer.
Birbhum.—Dubrajpur, Nalhati.
Hooghly.—Bansberia, Khamarpara.
Midnapore.—Chandrakona, Kharar, Ghatal, Ramjibanpur.
Nadia.—Ranaghat, Santipur.
Murshidabad.—Khagra, Jangipur.
Patna.—Patna.
Gaya.—Nabinagar, Daudnagar, Manpur.
Saran.—Sewan.
Darbhanga.—Jhanjharpur.
Monghyr.—Gidhaur.
Purnea.—Kishenganj.
Cuttack.—Cuttack.
Puri.—Balkati, Rathijima.
Balasore.—Balasore, Ramna.

Wages and organization in Bengal.

A perusal of the Provincial Monographs in brassware (written by Mr. Dampier for the United Provinces, Mr. Johnstone for the Panjab, and by Mr. Mahon for the Central Provinces) reveals a similarity to the conditions in Bengal, and specially the fact that the industry is not confined to *kansaris* or *thatheras*. All castes appear to

work at it. I found a *kayastha* fashioning a copper dish in North Calcutta; a *teli* manufacturing the well known Chandrakona horn; and in Berhampur I found *bagdis* and *kaivarttas* handling bell-metal. The workmen are paid in most places at piece-rates per seer and per maund, and can earn from Rs. 15 to Rs. 19 a month in Bengal, and Rs. 10 to Rs. 15 in Bihar; and one hard worker in Bhawanipur, Calcutta, was getting up to Rs. 30. Labour rates vary from 1½ to 5 annas for beaten brass per seer, and 7 to 9 annas for cast metal. From some old figures of 1876, I find the master's return on his outlay for material and labour was 15 per cent. The figures given to me in 1907 in respect of plain beaten brass work showed a return of 20 per cent, but rent had to be paid out of that. This industry is better organized than any other in the province; and it is most highly organized at Ghatal and Kharar in Midnapore district. The masters there are enterprising and wealthy; they obtain the material in economically large quantities, tin from Straits Settlements and copper from Japan and so on; they distribute the labour; they pay by piece-work, and they have a steady demand from Bara Bazar in Calcutta. Krishnamani Paramanik and some others have more than 100 men in their factories. They told me that 4,000 at Kharar out of a population of 9,000 were metal-workers; the whole village resounds with the beat of the hammer on the bell metal. In Mr. Collin's report, paragraph 13, are mentioned the specialities of various places. To that list may be added Kharar for bell metal *thalis*; Ghatal for *garhus*; and Kansaripara, Calcutta, for large brass vessels.

Mr. Collin in the Industrial Survey, 1890, recommended: (1) the use of dies for stamping out the metal, (2) better hand lathes, and (3) plate moulding. His view then was, and it is mine:—"Existing processes are costly, and a great saving of hand labour might be effected by machinery." Mr. Bipra Das Pal Chaudhuri of Moheshganj and Calcutta, who studied mechanical engineering at Middlesborough, England, and has had practical experience of brass manufacture, has assured me that there is an opening in brass manufacture for the educated capitalist; for, on the one hand, the cost of raw material is falling, and on the other hand, there is an increased demand for good ware from those who can afford to pay for it. It should be remembered however, that the copper trade is subject to fluctuations; at present, the American mines have outstripped the demand, and Europe has became "gorged" with copper.

Moulding.

It seems to me that there is room for improvement in the (1) moulding, (2) hammering and (3) lathe work. In moulding, there are three methods for the manufacture of the ordinary *lota*. In Balasore, a layer of wax is placed over an inner core, and an earthen mould over the wax. The wax is melted out and leaves a hollow space. In Bengal proper and at Mirzapur, United Provinces, the outer mould is made first in earth upon any old metal vessel; this mould is divided vertically in two halves, and the imprisoned pattern is then released and the parts joined again. Then the inner core is made by ramming earth inside the earthen outer mould. This core is taken out, scraped and dried, so that there is a space left for the casting. (Compare page 24, Brass Founder's Manual, Weale's Scientific Series.) In Bihar, a reverse method is followed: first, the inner core is laboriously made by additions of earth, and the core turned on an improvised lathe so as to take the shape required: next, the outer mould is made by plastering earth round the core, and the core is thinned again. The Bihar method has the merit that the artificer can make any shape he likes; but that is unnecessary, if articles of standard form are being turned out commercially. When I visited Madras, I found that method which is at present followed in Bihar was formerly followed there, but that it is now considered antiquated. The Orissa method is scientific, but expensive. The wax method is used also in making little models in Sambalpur and Gaya. In Bihar district the inner and outer mould are kept apart by little nail heads, except at Jamui and Gaya. There is also the method of making models, by making two matrices from a solid pattern, and placing the two together again. This is done at Gaya and Sambalpur.

Now I found only one man in the whole province who was making moulds from a special pattern, and even his next door neighbour was unaware of its merits. This man in Midnapore town had a very thin copper pattern made up of four pieces

which fitted into one another. This he had been using for twenty years, making both the core and the outer mould from the same pattern. This ensured accuracy and saved much time. In Madras I found that aluminium vessels were being cast from a pattern vessel, made in two vertical pieces. From this suggestion I had a pattern *lota* experimentally made for me at Alipur Central Jail. It consists of an ordinary *lota* cut into two vertical halves, the pieces being kept together by four small friction clutches. The Patna braziers admitted to me that this method would be better for them, and I am endeavouring to circulate this pattern.

Stamping from dies. The next improvement is in the stamping from dies instead of hammering. A hydraulic press worked by hand power, costing about Rs. 300, can give a pressure of 10 tons per square inches and press plates, *thalis* or *rekabis*, up to 9 inches in breadth. I have asked an agent of a firm importing these articles, to show them to the leading manufacturers in Kharar and North Midnapore. The bottom portion of the large *gagras* in Kansaripara, Calcutta, could also perhaps be stamped out by this method. Mr. Bipra Das Pal Chaudhuri and Babu Tarakali Chatterjee started the use of dies many years ago, but gave them up. Dies should be tried again. There will not now be the same prejudice against them.

Lathe work. In lathe work, it is not necessary that an improvement should necessarily mean steam power. In fact what can be tried first is an improvement on the hand lathe. At present one coolie, pulling a double-ended rope, gives a reciprocating movement to the axle, and there is thus waste of power at every reverse pull. What is used in Madras, might be copied in Bengal as a beginning. A large wooden wheel about the size of a cart wheel is propelled by a coolie holding a crank handle, and by means of a rope passing round the shaft of the lathe, communicates a continuous rotary motion. There is not only saving of time from the emission of the reverse pull, but by this device one coolie can work two lathes. This might be adopted at once in all the places where polishing is done on a factory system such as Khagra, Ghatal and Bankura. There is a further development, on which I am experimenting, in the use of a Romayne punkah machine for working this wheel.

If I had had more opportunity, I would have introduced these myself; I have circulated the ideas amongst many who are actually at work. The officer who may become Superintendent of Industries might very well push these methods by practical example. This will be more satisfactory than any system of teaching. I recommend that the big factories in Kharar, Kamarpara, Dainhat, and at Khagra should adopt power machinery, and that the smaller works should adopt improved hand methods.

Alloys. In the making of alloys, we have nothing to teach the people, and they are themselves capable of adopting new ideas. For instance, about eight years ago at Bankura, they started making a nickel ware (1 part nickel, $\frac{1}{4}$ or $\frac{1}{5}$ zinc) which has a very fine polish; it is circulated in the neighbouring districts. But there is a want of enterprise in pushing wares in Bengal. Inferior Benares ware was being hawked about on the platform of Asansol station, in a district in which first class ware is produced. Where the work is organised, as at Kharar, the master workers should be induced to take up mechanical power; and at Sewan, at Patna and at Gaya, where the work is not organized, there is an opportunity for educated capitalists to organize the industry. It is not creditable to Bihar districts that there should be so large imports of Mirzapur ware.

Brass locks and telescopes. Under the head of brass, I should like to notice the exceedingly good workmanship on brass locks turned out by the few families still left at Nataghar, near Sodepur, 24-Parganas, and in the manufacture of Newtonian telescopes carried out by Messrs. S. K. Dhar and Brothers, Hooghly. The present manager is Babu Gokul Nath Dhar. The first are artisans of the blacksmith class, who have once learnt in a European shop accuracy and neat finish and have never forgotten their training, and the other is a member of the educated middle class, who combines scientific knowledge with mechanical skill.

GLASS MAKING.

No real progress in glass manufacture.

The constituents of glass are silica and alkali; both of these are obtainable in India, and the fire-clays for the furnaces and fuel are obtainable in this province, yet in spite of these advantages the manufacture of glass has not advanced beyond the rudest stages. The imports from the United Kingdom have remained almost stationary, whereas the imports from foreign countries, especially from Austria-Hungary have steadily been increasing, until in 1906-07 the imports of glassware from that country into Calcutta were valued at Rs. 11·8 lakhs out of total glass imports of Rs. 38·2 lakhs.

In 1890 it was recorded that glass ware was made in Patna, Bhagalpur and in Calcutta. Simple vessels were made in the former place, and glass bangles at Bhagalpur and Patna. The material was river sand and impure carbonate of soda. In 1908 there is practically no manufacture of glass in the province. A few Muhammadans in Harrison Road, Calcutta, and in Lodikatra in Patna City, fashion simple articles by melting down broken glass. In Calcutta coarse pressed ware in the shape of ink bottles, medicine phials and small lamps are turned out by the thousand. The methods and patterns are of the simplest character.

Attempts in Upper India.

In Upper India, the manufacture of glass on a commercial scale has been attempted with some success at Rajpur, near Dehra Dun; at Ambala City; at Sekendra, Aligarh district; at Ahmedabad; and at Firozabad in Agra district. The Upper India Glass Works of Ambala City have a sample room in Harrison Road, Calcutta, and the factories of Rajpur, Sekendra and Ambala, as well as the Patna workmen sent exhibits to the Calcutta Exhibition of 1906. Now in Bengal proper there have been the Pioneer Glass Manufacturing Company, Limited, of Titagarh which worked from 1890 to 1899, and the works of the Indian Glass Company and later of the Bengal Glass Company at Sodepur from 1898 to 1902, both in the 24-Parganas district. I have visited the buildings of these two factories, now shut down, and have enquired regarding the cause of their failures, whereby several lakhs of rupees have apparently been spent to no purpose. The installation at Sodepur was found to have been most elaborate, while that at Titagarh was plainer but extensive. There were many minor causes; but the difficulty common to both was the supply of skilled labour for glass blowing in the climate of Bengal in the vicinity of Calcutta. For instance, it seems unfortunate that it should have been at the beginning of the hot weather in the valley of the Hooghly that the freshly imported European craftsmen should have started in a tropical country the trying occupation of glass blowing. It will be seen later that the Bombay expert, Mr. Wagle, has given his views regarding the difficulties and failures in Bengal and Upper India, and has held that many of the failures were preventable. The same has been said in Mr. Dobb's Monograph for the United Provinces (1895) as regards the experiments made at Jhelum (1877), Alipur (1879) and Bhagalpur (1882), all in Upper India.

Attempts in Bengal.

Mr. Wagle's enquiries in Bengal in 1904.

In 1900 the Bengal Government sent round samples of sand from the south of France and enquired whether similar sand for glass manufacture was available in Bengal. The Rajmahal sand mixed with potter's clay was found similar. Then in 1901 Sir Cecil Stevens suggested that the question of glass-making in Bengal might be investigated. Mr. N. B. Wagle, B.A. of Bombay, who had spent four years in Europe in practical glass-making, having worked as a journeyman in Blackfriars Glass Works in London and having studied at the University College, and at Newcastle, was appointed to prepare a report and to submit proposals for starting glass manufacture in Bengal He had asked for Government assistance to tide over the interval of experience and research. His deputation extended from January to May 1904; but he did not submit his report until Government took strong measures. It was received two years afterwards, in February 1906. In the meantime Mr. Wagle had taken to other industries in the Gwalior State. I made an attempt to communicate with Mr. Waglo, but was informed from Gwalior that he had left India; and so his proposals for floating a joint-stock company could not be discussed with him. Nothing definite has yet been done on the basis of Mr. Wagle's report, but the

subject came before a conference which was held in March 1906 to consider a proposal for a technical college in Bengal. Raja Pyari Mohan Mukharji thought that there should be a class for glass-making, preferably at Barakar. The conference recommended that the industry should be encouraged and that Government grants be offered to persons already engaged in it to enable them to proceed to Europe or America to improve their knowledge and skill and that assistance be given to them for finding a market for the sale of their manufactures. [Mr. Oldham's letter dated 2nd April 1906, paragraphs 10 and 16 (iii).] These are my own independent recommendations, as will appear below.

Mr. Wagle's report.

Mr. Wagle's report is full and interesting; but, as far as Bengal is concerned, the prospects of glass manufacture do not seem hopeful. The report should be read by itself, but for the present purpose it may be summarised as follows:—raw materials—available in Bengal; labour,—difficult to procure; previous attempts,—unsuccessful, but failures due to preventable causes; market,—local productions should be only plain and simple, as they would have to compete with the cost-price dumpings of the Belgium and Austrian manufactures. My own enquiries confirm these conclusions.

Raw materials.

Quartz sand is available at Rajmahal with over 90 per cent of silicic acid, and at Barakar, at Giridih and at Titagarh with over 80 per cent of silicic acid. The Titagarh factory used Hooghly river sand, but it has over 3 per cent of oxide of iron. The Sodepur factory imported Belgium sand with 98 per cent of silicic acid and obtained quartz from near Siui with 97 per cent of silicic acid The perfect sand must be fine, uniform, angular and white. Alkalis have to be purchased in Bengal proper. In the United Provinces the existence of *reh* in the soil is more convenient, but the enquiry made by the Government of India about 1880 disclosed the fact that *reh* could not give pure glass, yet that in a good furnace it could give superior bottle glass. (See Agricultural Ledger No. 5 of 1902 regarding Alkali Compounds).

Labour.

The supply of labour is really the most important item; a sufficient number of skilled hands and foremen from the old factories could be collected for a new factory; but experience has shown that the climate of the plains of Bengal handicaps the workmen. The up-country men are stronger than Bengali workmen, but not so good.

Items of manufacture.

As for manufacture, the Sodepur firm selected soda-water bottles; the Titagarh firm undertook tumblers and bottles, at one time making in a day 10,000 bottles of all sorts. As Mr. Wagle has explained, the pressed ware is the kind which requires least skilled labour and this should be taken up by any new factory, though it has to meet the competition of the articles of third quality which are exported at nearly cost price from Austria and Belgium. This is the real difficulty to which Mr. Wagle alludes in pages 23-24 of his report. Government in the Medical Store Department import a considerable quantity of plain glass ware, which could be made in India, and, if the Indian article be, quality for quality, the more favourable in price, the Director would prefer to buy, and has authority to buy, the locally made articles. New American machines can, however, turn out twelve bottles a minute; and can press glass with great economy in portable hinged moulds.

Proposals in Bengal.

Babu Bihari Lal Pain of 71, Phear Lane Calcutta, who was one of the Directors of the Pioneer Glass Company at Titagarh, says he would be prepared to start again if Government would assist him to obtain an expert, and if Government give him patronage in the demand of Government stores. Messrs. F. W. Heilgers & Co., Calcutta, have no present intention of making a fresh start with the Sodepur factory. Mr. Saligram Singh, of Ghaighat, Benares City, who has studied glassware in Tokyo, Japan, is trying to float a company to start a glass manufactory near Barakar to prepare block glass for bangle-making and to prepare bottles and phials. This Barakar was the site which Mr. Wagle had proposed when considering the opening of a glass factory in Bengal. From the monographs on the subject we can glean some items of information for comparison's sake. Mr. T. N. Mukharji (1895) said that glass ware in Bengal was made only from English imported glass. In the Panjab, Mr. C. J. Hallifax (1892) wrote that only *churis* and bottles and chimneys

Suggestions from various reports.

were made from glass which was locally manufactured, but that only broken glass was used; and that it was an unimportant industry which could only be effectively and economically improved by manufacture on a large and permanent scale, but that it would continue as long as there was a demand for native-made *churis*. The story is the same in the Central Provinces (1905): only *churis* are made, and made from material obtained from the United Provinces. Mr. Dobb's monograph for the United Provinces (1895) suggested that what is wanted is that two practical glass blowers should proceed to a glass factory in England and in Wurtemberg, should return with a complete set of tools and appliances, and should be set up by Government as instructors. These views may be considered along with the recommendations of Mr. Wagle, which were: (1) imposition of a protective duty on glass imports; and (2) the buying over of one of the old concerns and its management under State guidance until it could be handed over to a private company. He also proposed: (*a*) certain concessions in railway freight; (*b*) Government patronage of products; and (*c*) free use of Government land.

In India people are accustomed to get much done for them by Government; there is a fair cleavage of opinion as to whether Government should pioneer at all. But if Government is to pioneer at all, on full consideration I do not think that Government is justified in selecting this subject of glass. Compared with leather, for instance, it is less important. India cannot hope to make plate glass: and the market for articles for domestic ware is not so wide as in Europe, as brass and earthen vessels are the vessels for which the people generally have an affection. Mr. Waglo's expectation that glass ware will supplant metal ware (page 25) is, I am afraid, not likely to be realized. But though Government should not pioneer, and admittedly the previous failures in private enterprise are discouraging, yet the private capitalist even in Bengal has an opening. It is possible to make glass in Bengal, and there is a market for a certain quality; but the real difficulty is in the acquisition of skilled labour. If an arrangement could be made with the syndicate who control the use of the Owen's bottle-blowing machine, this difficulty could be overcome to some extent. I have consulted both those who started the original Pioneer Glass Factory and those who use glass commercially; they assure me that a glass factory should pay, that a little skilled labour from the Continent is necessary for a short time, and that bottles and pressed goods could be turned out at a profit. Hence this industry is recommended to capitalists. Mr. Alakh Dhari, the Secretary of the Ambala Works, in his paper before the Industrial Conference of 1906, emphasized the study of the business and commercial aspects of the industry. In the first place, the neighbourhood of Barakar, which Mr. S. N. Singh has selected, is probably as good as could be selected in Bengal. The climate is not as trying as in the neighbourhood of Calcutta, and Sini quartz, Damodar sand, and coal are obtainable. At the same time, Titagarh has its advantages, as it is close to the great distributing centre. As for the alkalis, both carbonate of soda and carbonate of potash are found in India, and the suggestion of utilising waste products from gas works and from the increasing number of soap factories deserves separate research. In the second place, Mr. S. N. Singh has had an expert's training, and his services should be utilized by some of his countrymen. It is not likely that amongst the new subjects to be selected for the Government of India technical scholarships, the art of glass-making may be included; but the Association for the Advancement of Scientific and Industrial Education of Indians might very well select glass-making as a subject. The record of the work of the Association is such (Special Report, Part I, Chapter V) that the Bengal Government might make a grant to the Association for this purpose, in furtherance of the proposals of the conference of March 1906; *e.g.*, Rs. 50 per month for two years. Out of the first 48 names in their list from 1905 to 1907 there is only one, Mr. W. N. Chaudhuri, who has taken up glass as a special subject, and that at the Cothen Polytechnic in Germany. He will probably return to India in 1909. Amongst the next list of 80 names for 1908 is one Upendra Nath Roy, of Chittagong, who has taken up the subject of glass manufacture. In the third place, the requirements of Government in the Medical Store and Telegraph Departments, and possibly in other departments, such as State Railways, could be met from locally-made articles. The management of the factory should ascertain the precise specification

Recommendations.

required by these departments, and thus give quotations for each class of article landed in Calcutta. For example, I have learnt from the Director of Medical Stores that he would gladly give orders locally; and that he has an allotment for local purchases. There seems to be in India a market for 4, 6, and 8 oz. medicine bottles round and octagonal and for larger bottles 20 and 26 oz. If the local factory would supply the requirements of the Director of Medical Stores at rates which were no greater than the rates for imported goods, Government should be prepared to insist that the local goods were purchased. Government patronage cannot, however, very well go beyond this. A business-like local factory, which made articles within its capacity, should however, expect in addition the patronage of wholesale chemists and should be able to find a market for the ware amongst the Muhammadan population. Finally, I think that it is a pity that greater publicity is not given to information such as Mr. Wagle's report: it is even now not directly available to the private capitalist. It has been suggested to me that further experiments should be made; but I do not think this necessary. Such experiments would not cost less than Rs. 15,000: the result would be intelligible only to chemical experts. On the other hand, there seems to be no doubt that, given good material and suitable furnaces and annealing chambers, glass can be made in Bengal. As to whether it can be made at a commercial profit has not yet been properly tested, for neither the methods used nor the product selected have been appropriate.

I do not recommend a protective duty or pioneering in the case of the glass industry; but I suggest that encouragement in the way of Government patronage be fully given to any manufactory in Bengal which can make up to specification. I have endeavoured to explain to those concerned what material can be made in Bengal, and what are the requirements of Government departments, and to bring together expert and capitalist.

Chemical Industries.

Local manufacturing firms.

I have long thought that in analytical chemistry there is an opening for educated Bengal, provided accuracy could be obtained; and also in the manufacture of chemicals, if business enterprise accompany knowledge. There are no local manufacturers of chemicals beyond Messrs. D. Waldie & Co., of Konnagar, the Indian Pharmaceutical Works, 13, Upper Circular Road, and the Bengal Chemical and Pharmaceutical Works, Limited, 91, Upper Circular Road, Calcutta. The first well-known firm is mentioned by Mr. Collin as a manufacturer of acids, which it still is. The sulphur for the sulphuric acid has however to come all the way from Sicily. The firm also manufactures various salts, sulphates, manures, disinfectants and general chemicals. The factory was formerly in Chitpur: for 13 years it has been at Konnagar; although it is what might be called a *swadeshi* factory, yet it suffers from the lack of many items. Wooden barrels cannot be made out here and iron drums are indifferently made: bottles have to be imported: the only acid-proof jars are those that come from Doulton & Co., of Lambeth. Local enterprise might practice on these items: the firm would gladly take local glass bottles and local acid-proof jars if they could be made. The Indian Pharmaceutical Works make drugs from indigenous articles by means of hand machines.

The Bengal Chemical and Pharmaceutical Works, Limited, is one of the most go-ahead young enterprises in Bengal. Dr. Prafulla Chandra Ray, D.SC., F.C.S., started it as a small private concern in Lower Circular Road about 15 years ago and made drugs from indigenous materials. About six years ago it was made into a limited liability company, with a capital of two lakhs. Many of the leading chemists in Calcutta are share-holders It has now a well-thought-out and well-managed factory with about 70 workmen, at 82, Maniktola Main Road. Babu Rajshekhar Bose, the manager, is an M. A. in chemistry. The variety of manufactures is considerable. Besides the manufacture of drugs and acids, the manufacture of laboratory apparatus, which requires skilled craftsmen in wood and metal, has been taken up. The latest development is in perfumes The enterprise shows

sign of resourcefulness and business capacity, which should be an object lesson to capitalists of this province.

Industrial alcohol.

The great difficulty with which the chemical industry has to contend is in connection with industrial alcohol. It is occasionally mentioned in the press that the manufacture of crude alcohol for industrial purposes under proper Government regulations would be a fine *swadeshi* industry. Alcohol is required: (*a*) for chemical transformation, as in the manufacture of iodoform; (*b*) as a solvent or precipitant, as in the case of papain; (*c*) for burning; and (*d*) for the finished product, as in the case of liquid extracts, tinctures, essences and liniments. Section V of the Board's Rules in the Excise Manual is prepared on the assumption that spirit prepared after the English fashion is for direct human consumption. Section IX deals with the making of spirit unfit for human consumption by the admixture either of caoutchine or of naptha Messrs. D. Waldie and Company have a private distillery at Konnagar. The Bengal Chemical and Pharmaceutical Company at Maniktola purchase imported spirits 68° over proof at Rs. 1-10 per gallon, which becomes Rs. 13-4 after duty has been paid: so the duty is nearly eight times the prime cost. This spirit is used in preparing tinctures, extracts and ether. At present the Government is willing to allow the spirit to be manufactured or stored in a bonded warehouse: full duty to be paid when it is removed to the factory, and refund to be granted of the duty of the amount lost in course of manufacture, after keeping only 5 per cent. *ad valorem* duty. The Bengal Chemical and Pharmaceutical Company ask that they be allowed to manufacture in a bonded factory under supervision of excise officers, and to pay after manufacture the full duty on the spirit contained in the preparation, and 5 per cent. *ad valorem* on the amount of spirit lost. If it is the fact, as is asserted, that this concession is allowed to manufacturers in Europe, it is for consideration whether it may be allowed here. Government does not gain interest on the excess temporarily handled, whereas the private company feels the loss of the capital locked up in duty. From my enquiries in the Excise Department, I learn, however, that the request of the firm goes beyond what is allowed in Europe.

I think that special concessions are required for the use of industrial alcohol in the lac trade. This will be mentioned later.

Analytical chemistry.

I find that Indian analysts are employed in the Konnagar works and in analytical laboratories. There is the patient drudge who cannot get more than a clerk's pay. There are also highly skilled experts, who can command high salaries. Still in the best laboratories in Calcutta, the Bengali analyst is not yet more than second rate. The graduates in chemistry should take up this work instead of becoming, as so many do, teachers in chemistry.

Classes in industrial chemistry.

Mr. Puran Chand in the paper at the Benares Industrial Conference in 1905 urged the necessity of experiments in industrial chemistry. I trust that the objections to the industrial chemistry classes which the Bengal Government are desirous of opening at Sibpur College, may be overcome and that these classes furnish the nucleus of a technological institute in Calcutta. I have dealt with this subject in pages 10 and 31 of Part I of this Special Report.

Dyeing and Printing.

Monographs on dyeing.

In 1883 Dr. McCann published an account of the dyes and tans of Bengal, the history of which goes back to 1875, when the Secretary of State at the instance of Mr. Thomas Wardle ordered an enquiry into dye stuffs of Indian growth and production. The memorandum prepared in accordance with those orders by Mr Liotard in 1880 excluded Bengal. The report for Bengal was not issued till 1883, but unfortunately recited only information collected in 1875-77. There is, however, a wealth of practical information about dyeing as well as about dyes in Dr. McCann's memoir. There is a tendency to depreciate these old compilations simply because they

Indigenous *versus* aniline dyes.

are old. The Provincial Monograph on dyes was written in 1896, by Mr. N. N. Banerjei, whose instructions were to deal with indigenous processes, rather than with products and materials. Mr. Collin in 1890 had stated that the use of vegetable dyes was becoming uncommon. In 1896 it was stated that the importation of cheap European goods and European aniline dyes was proving fatal to the indigenous industry. At the same time Mr. Banerjei pointed out the want of ingenuity in the production of colours and the want of assistance from capitalists. In 1908 the only place where I found the industry flourishing was in the Serampore subdivision; and to a lesser extent in Patna, in Saran, and in Bhagalpur. Mr. Banerjei said that the industry had became extinct in northern and eastern Bengal and in Orissa. The imports of aniline dyes from Belgium ports to Calcutta have increased steadily as follows:—

1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
1·69	3 26	3·79	3·73	6·70 lakhs.

On the other side of the picture is the following interesting record of Calcutta's export of indigenous dyes—the figures are in lakhs of rupees:—

	1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
Indigo ...	65·97	60·13	56·07	41·03	45·07
Myrobalans ...	2·95	4·76	6·85	13·67	11·75
afflower ...	0·55	0·66	0 32	0·30	0·50
urmeric ...	1·32	0 68	0 59	1·21	1·17

In Bihar districts I have found a desire on the part of the country dyer to take up natural indigo; the indigo now produced is finding a local market at about Rs. 120 a maund for its inferior qualities. The decrease in the number of factories has diminished the amount which filtered to the bazar through petty pilfering. The country dyer is content with a quality which the Calcutta broker would despise.

Prospects for future enterprise.

Even in the dyeing of foreign materials there is room for the capitalist in Bengal. Bengal imported in 1906-07, 204 lakhs of coloured piece goods. The Bengal Laxmi Cotton Mills consume Rs. 3,000 of dyed yarns monthly. It is calculated that there is a profit of two annas a pound in the dyeing of yarn. Bengal has, moreover, many dyeing materials; Dr. McCann's book names 18 giving red dyes, 21 giving yellow dyes, 2 giving blue dyes, 20 giving brown and 4 giving green dyes. Mr. Banerjei's monograph mentions 53 indigenous dye-producing plants. There is a prospect of the capitalist succeeding in dyeing piece-goods by means of indigenous materials, if up-to-date methods are used. It is unfortunate that the Bengal Dye Works, Limited, was not floated. It was to have engaged the services of Mr. G. C. Sen, an expert in dyeing and colour chemistry, who returned in 1907 after study in Leeds and in Germany.

Fastness of dyes.

Regarding the fastness of indigenous and imported dyes, Mr. E. R. Watson, F.C.S., has made scientific experiments from which it will appear that bakam (*caesalpinia sappan*) manjista (*rubia cordifolia*) and catechu (*acacia catechu*) compare very favourably with the great majority of the synthetic products; but that, contrary to accepted opinions, the majority of indigenous dyes give fugitive dyeings. Other information about catechu is to be found in the Agriculture Ledgers No. 1 of 1895, and No. 35 of 1896. It is well known that any after-treatment of copper sulphate will increase fastness in certain cases; and there is a new German patent for adding the copper to the printing colour itself in the form of an alkaline solution. These facts are worthy of attention. I found that even in the mixing of the European chemical powders, the indigenous dyer is careless and wasteful, because he uses more than he need do if he carefully followed the instruction

on the tin boxes. In Bihar districts I found that the tins bore the name of Bombay importing firms. The use of the lac dye had become unprofitable even in 1890.

Colour printing.

The colour printer is even more elusive than the dyer. He is fairly prosperous at Serampur, where he prepares handkerchiefs which are exported, as Mr. Collin said, to Rangoon, Madras, and Mauritius. At Madhubani on the other hand there was only one printer in the whole bazar. The calico printing is also done in North Calcutta and at Hajipur. As a rule dyers and printers simply colour the articles given to them: the Serampur printers are an exception. The wooden blocks for printing are made at Nawabganj near Barrackpore, at Patna, Benares, and at Samagaddi in the Nepal Terai.

There is an opening here for the Indian capitalist who would organise the business in Serampur or in the Bihar districts.

Pencil and Button Manufacture.

A new industry.

This is to be taken up by the Small Industries Development Company, under two of the students who were sent abroad by the Scientific and Industrial Advancement Association (see *Industrial India*, Volume III, February 1906). The Bengal Button Factory has been started at 130, Bagmari Road, Calcutta, under one who has studied the industry in Osaka, Japan.

Ink Manufacture.

Development since 1890.

Since 1890 considerable improvement has been made and there are several manufactories of writing ink in Calcutta. It is an industry which requires little capital. Mr. J. P. Bose studied the manufacture of printing ink in Japan, and has now a manufactory in Ultadanga financed by a Mymensingh capitalist.

Babu Srish Chandra Dutta, joint-secretary of the Indian Industrial Association lectured in 1894 on printing ink manufacture from lamp black and linseed oil varnish. He was perhaps the first Indian manufacturing chemist (see proceedings of Indian Industrial Association for the year 1896).

Paper Making.

The indigenous industry.

There has been a further decadence since 1890 in the indigenous manufacture. Hand-made paper is still produced at Hooghly district, principally at Mahanad Gosainmalpara, Neala and Ballidewanganj by a class of Muhammadans known as *kagjis*. They are fast dying out. Their paper has a market at Rs. 10 per 100 sheets amongst Calcutta traders for account books. The same class is found at Mainan in Howrah district and at Krishtopore and Srirampore in the Jangipur subdivision of the Murshidabad district. The manufacture ceased five years ago at Nasriganj in Shahabad, and in Cuttack it has practically ceased. (See the notes on *champat* paper in Banerjei's Report on the District of Cuttack, page 171, Calcutta, 1893, and O'Malley's Gazetteer of Cuttack District, page 134; also on *basota* paper, O'Malley's Gazetteer of Shahabad, page 93).

The factory industry.

A practical manufacturer writing in May 1907, said that Indian mills could make profitably a large proportion of imported paper, if new up-to-date mills were furnished with the most modern plant for effecting economy in manufacture. The Maharaja of Mourbhanj is anxious to lay down such a mill. The prospectus for the Mourbhanj Paper Mills Company with a capital of 16 lakhs has been issued, of which the Maharaja will subscribe one-third. The works are to be at Baripada on the river Boorabolang. The material is to be *sabai* grass, which can be obtained locally. In Bengal the only paper mills are the Titaghar Paper Mills Company, Limited, which has acquired the Imperial Paper Mills and the Bally Paper Mills, and the Bengal Paper Mills Co, Limited, of Raniganj. The former gave a dividend of 2½ per cent. on the second half year of 1907. I am informed that a leading Indian publisher complains of the quality of the Indian paper for publishing purposes. In

1906-07, the Government of Bengal purchased 5½ lakhs of paper in India. This may be compared with the local purchases in lakhs for each of the previous ten years since 1896-97:—4·55, 5·11, 5·41, 4·42, 4·97, 5·59, 6·08, 4·51, 4·54 and 4·52 lakhs. The imports by sea into Calcutta were in 1906-07:—printing paper, 8 lakhs; writing paper, 5$\frac{1}{10}$ lakhs; other kinds, 4½ lakhs. The Bengal Paper Mills of Raniganj employed over one thousand work people, and turned out 11½ lakhs in 1905-06, and over 17 lakhs in 1906-07. The two mills at Titagarh and Kankinara under the Titagarh Paper Mills Company, turned out 28$\frac{4}{10}$ lakhs in 1905-06 and 30 lakhs in 1906-07. These mills manufacture white printing, *badami*, coloured printing, cartridge, blotting paper and foolscap out of rags, grass, straw, jute, old gunnies, hemp baggings, ropes and waste paper. The wood pulp used abroad gives a better finish than these materials. *Sabai* grass for the mills comes principally from Sahebganj in Rajmahal subdivision at an average rate of Re. 1-4 a maund.

MATCH MANUFACTURE.

New factories. About eight years ago there was an attempt made to start the local manufacture of matches in Bengal. Factories have been started at Ahmedabad, Kotah, and in the Punjab. There is now one manufactory working in Bengal since January 1907, the Bande Mataram Factory at 38, Russa Road, Tollyganj, belonging to Dr. Rash Behari Ghosh and Babu Sailendra Kumar Mitra. The assistants are Messrs. P. C. Roy and A. P. Ghose, who have returned from Japan. The wood used is the Sundarbans "genwa" (*Excæcaria Agallocha*), a soft wood used for cheap house furniture in Calcutta. They tell me that they had previously experimented with many others. After examining their machinery, I think that the unevenness of the match splints is due to the wood and not to the machinery. The dipping machines are made by Babu Charu Chandra Mullick of Bankipur. Rai Sahib Upendranath Kanjilal, F.L.S., read a paper on the Indian woods suitable for match-making at the Calcutta Industrial Conference of 1906; and an account of the manufacture of matches compiled by Babu Hari Das Chatterjee is given in *Industrial India*, Vol. III, April 1906. Another factory has not yet started: the Oriental Match Manufacturing Company, of 124, Canning Street, Calcutta with a nominal capital of one lakh. A match factory is being started at Tarikere in Mysore by Mr. V. G Joshi of Poona. The Berar Match Manufacturing Company of Ellichpur, Central Provinces, with a capital of one lakh, is using *salai* and *maharuk* woods (see Mr. C. E. Low's Note on the Match Industry).

SOAP MANUFACTURE.

An attractive industry. The manufacture of soap has recently advanced and is attractive to Indian capitalists. The example of the North-West Soap Company of Meerut, who started at Garden Reach, Calcutta, under European supervision was helpful. At the Calcutta exhibition of 1906 there were exhibits from four Bengal companies; there are now only three besides the English company, namely, the Bengal Soap Company, 54-1 Mechuabazar Street; the Oriental Soap Factory, Goabagan, and Dr. Nil Ratan Sircar's National Soap Factory, 92, Upper Circular Road, Calcutta. They have all taken to highly scented, highly coloured toilet soaps, for which I find there is a large and expanding demand. The Bihar Pioneer Soap Manufacturing Company, of Dinapore exhibited at the Bankipore exhibition of 1908. Babu Kamlanand Singh of Srinagar started a factory at Purnea, but it was closed in 1906. Mr. E. R. Watson, F.C.S., has made an analysis of the *swadeshi* soaps (*Statesman*, February 5th, 1907.) European soap of the highest quality has 93 per cent. of pure soap. Six samples of *swadeshi* soap showed proportions varying from 66 per cent. to 91 per cent. Three were classed very good, but one was found to be grossly adulterated with 20 per cent. of starchy matter.

There would appear to be an opening for the commercial manufacture of the common *dhobi's* soap, but one of the ingredients is dear, because it is used as an adulterant of *ghi*. Indigenous soap manufacture is nowhere done on a factory scale.

Patna soap was formerly used all over Bengal. The ingredients are given in Dr. Buchanan Hamilton's Account of Patna District (Martin's Eastern India, Vol. I, page 329).

Brush Making.

Mr. Collin said that this was a new trade, and that the demand was increasing. Brushes continue to be manufactured at Khurdah, Panihati and Sukchar.

Perfumery.

Further development possible.

Much has been written lately about the prospects of perfume manufacture in India. The local manufacture of an expressed oil impregnated with the odour of the *chambeli* flower has been carried on at Fatwah in the Barh subdivision of Patna district for over a century. There are now only twelve families, and the industry is decaying. Mr. D. Hooper, F.C.S., of the Indian Museum, gave a paper on Indian essential oils at the Calcutta Industrial Conference, 1906, which gives information for those desirous of starting in Bengal. Mr. J. N. Banerjee stated at the same conference that in Bengal there are grasses from which the essence of lemon and peppermint are extracted. This subject deserves more attention and enquiry in Bengal; for other provinces seem to be more fortunate in possessing the raw materials. I find it on record, however, that there is a good opening for a perfume factory equipped with up-to-date machinery, (see *The Indian Age*, March 1908, page 18). Moreover, if there is to be any export (at present only ¾ lakh is exported), the scents for export must be made less heavy, by the use of some other than gingelli oil.

Other Industries.

No special remarks beyond those of Mr. Collin are required on the following:— Boat-building, book-binding, electro-plating, fishing-hooks, gilding, masonry work, musical instruments, tape-making, tin foil, watch-repairing.

CHAPTER IV.

MINING INDUSTRIES.

Mining Industries are principally in the Burdwan and Chôta Nagpur Divisions.

Coal.

Enormous increase in output and consumption.

The industry of coal mining has advanced with enormous strides since 1890. In that year Mr. Collin described the industry as still in its infancy and as growing. The output of coal in Bengal has risen from 1½ million tons in 1887 to 8¾ million tons in 1906 and over 10 million tons in 1907. At the end of the year 1907 there were 81 companies, with a nominal capital of 411 lakhs; of these companies, 38 were floated in 1907; none pay less than 10 per cent. and some very much more. The average number of workpeople employed in the Giridih, Jherriah, Asansol and Ranigunge fields was nearly 120,000 in 1907. Another field is being opened in the Palamau district, and the industry has got great possibilities in Birbhum district. There has been an increased expenditure of native capital in the development of mining. It is a matter of common knowledge that the supply has not been able to cope with the demand both for local consumption and for export, notwithstanding the great extension of the industry. It is the view of the Bengal Chamber of Commerce that the position of the coal industry is so strong and the prospects are so good, that it seems to be likely to be by far the best and most lucrative opening for young Indian students. The Superintendent of the Bengal Coal Company, Limited, Mr. H. H. Macleod, has stated that it is the finest of all the

svadeshi industries, and that it has a magnificent future before it. The attention, therefore, of the middle class youth is directed to the opportunities which exist at Sibpur and in the mining districts, as detailed on page 14 of the report on technical education, for obtaining skilled knowledge in practical and theoretical mining and to the probability of obtaining employment in the mining industry. The actual labourers earn four annas to ten annas a day. They are in the fortunate position that the demand is in excess of the supply. It is not improbable that this may lead to the introduction of mechanical plant for coal cutting. A system of mechanical sifting has already been introduced at one of the East Indian Railway Company pits in the Giridih field.

Mica.

A monopoly of Bengal.

Mica is worked principally in the districts of Gaya, Hazaribagh and Monghyr. The output has increased from 87 tons in 1887 to 1,018 tons in 1908. The export has reached to 23 lakhs, more than half of which is sent to England. Bengal is reaping the advantage from the fact that mica is the best non-conductor of electricity known. There was a recent fall through the American collapse, but still there is a firm demand owing to increased requirements. In the Hazaribagh district, in the vicinity of Koderma, mica gives employment to more than 6,000 people. In mica mining there used to be a great deal of wastage, but an invention for compressing broken mica into block form, called micanite, has been of great service. In this industry also there is an opening for Indian youths who will combine scientific training with practical experience. One producer informed me that the industry suffered from the want of accurate knowledge of the requirements of the European and American manufacturers. There is evidently some doubt on the subject as will appear from the interesting correspondence published in the Agricultural Ledger No. 24 of 1900.

Other Minerals.

In parts of Manbhum, Singhbhum and Ranchi districts, plates, bowls and the like are manufactured on a small scale from soap stone. The quarries give employment to about 200 labourers in Manbhum and to a similar number in the Singhbhum district. Iron stone is worked in Dhalbhum within the Singhbhum district by the Bengal Iron and Steel Company. The outturn was over 7,000 tons in 1906. In Hazaribagh the industry is insignificant. Sambalpur district turns out varying amounts of iron ore; in 1907 the amount was 800 tons. The smelting of iron for local use is carried on to a small extent in few places in the Sonthal Parganas. The Tata Iron and Steel Company, have secured the rights to iron ore within Mourbhanj, one of the Orissa Tributary States. Messrs. Ambler & Company turned out in 1906-07 as much as 200 tons from their slate concerns in Monghyr district. Manganese has been worked in the Singhbhum District.

Requisites for any improvement.

The first requisite for the indigenous development of the mineral industries is patient and scientific prospecting. This requires the bold outlay of capital, of which there may be no prospect of immediate return. The next is that there must be as greater bias on the part of under-graduates to the study of the sciences concerned, such as geology and metallurgy. In March 1908, 1,200 students appeared for the examination of the Calcutta University for the B. A. degree, and only 38 for the B. Sc. degree.

CHAPTER V.

INDUSTRIAL ARTS.

Position and possibilities of industrial arts in Bengal.

The artistic industries of Bengal province are not supported as they ought to be. Much of the patronage whereby some of the arts have been kept alive is from the European residents. As Mr. Collin said, Indian noblemen appear to be more inclined to patronise foreign productions than the arts of the country. Although the fact may

be deplored, yet it is only natural that each community should be attracted by the arts of the other. Indigenous artistic industries at present suffer from want of patronage and want of publicity; and any real encouragement must consist in providing publicity and a ready sale for the articles of the best type. The Indian Museum in Calcutta is imperial; Bengal has no provincial museum similar to those in Lahore, Lucknow and Madras. At the museum of the School of Art there should be an art depôt, where should be exhibited samples of the best work of Bengal craftsmen, with the names and addresses of the makers and the market price. If Government are not prepared to subsidize a private art-ware depôt in Calcutta, I recommend that Government itself should maintain at the School of Art a model art-ware depôt. This is done with success in Lahore and Lucknow. Moreover, if similar depôts were started at divisional head-quarters under the auspices of local enthusiasts, some good might be done. At my request, grants have been given to local bodies at Bankura and Bankipore. The subject has also been discussed in pages 19 and 31 of my report on technical education.

Gold and Silver Work.

Degradation of indigenous design.

The monograph on gold and silver work in the Bengal Presidency by Mr. D. N. Mookerji (1905) describes the articles made in Cuttack, Dacca, Murshidabad, Patna and Monghyr districts. Mr. Collin said that native jewellery, so long as it was kept to country designs, was of great merit, but there was a tendency to imitate English designs. This tendency has not diminished, but indigenous ornamentation is being placed on articles meant for European use. Such for example is the work turned out by Girish Chandra Dutt & Sons, of Bhawanipur, Calcutta. This firm is enterprising in that it uses Canning's polishing calico mops attached to the boss of an electrically driven motor lathe. The Cuttack silver ware is known outside Bengal principally for the delicate filigree work, which however is only carried on in the Cuttack town itself. This form of the art received considerable development from the Orissa Art Union Factory started by Mr. Madhusudan Das, C.I.E., who has organized on a factory basis with subdivision of labour the hereditary skill of the native craftsman. Mr. Das told me that he was anxious to give up his factory as it was not a commercial success. The number of his employees has diminished and he has given up the Calcutta agencies. Mr. Das lamented the deterioration in quality of the work in precious metals, and the difficulty of obtaining a market for the produce. But some central sale emporium in Calcutta and the issue of catalogues are necessary for maintaining and increasing the market for such wares. Articles of personal adornment of traditional design, as well as articles of European pattern, like picture frames and card cases, are prepared at Cuttack.

In the matter of designs Mr. Das has recruited a man from the School of Art in Madras, but as some of the latter's designs include in one piece of work a cherub with wings, a peacock and a Greek god, his skill as a teacher of oriental designs may be open to question. If Mr. Das had a show room in Calcutta in addition to the one in Cuttack, his goods would obtain the patronage which they deserve. As regards the other places, the Kharagpur fish made of overlapping thinly beaten-out ovals is, of course, well known; but the number of workers in Monghyr district is decreasing. In Murshidabad the Nawab Bahadur informed me that malaria was playing sad havoc with such industries as still do exist. The centres of the craft are at Khagra, Kandi, Pulinda and Bhagirathpore.

Gold and silver smiths are extensively found in the Patna district. Generally we find that the traditional types of Indian jewellery are giving way to the jewellery of European patterns amongst the better classes. Mr. Mookerji had no suggestions to make for the improvement of this art.

Ivory Carving.

A dying art.

This art was practised at Barabari in Rangpur district and in Kendrapara in Cuttack district, as well as in Murshidabad, according to Mr. Collin's report.

Mr. G. C. Dutt in his monograph of 1901 stated that the industry had disappeared at the former place in Rangpur district, and from enquiry I learn that it no longer exists in Cuttack district. The Chiefs of the Orissa Tributary States appear to have retained carvers who reached a high standard of proficiency: beautiful examples, fifty years old, were sent by the Chief of the Nayagarh State to the Delhi Exhibition of 1903. There is a little unpretentious work in ivory done in Harkata Lane, off Bowbazar, in Calcutta. The ivory is obtained from the Orissa Tributary States. Thirty-five years ago there were no fewer than fifty families of carvers at Mathra, one of the several centres, in the Murshidabad district, but now there are not more than twenty carvers in the whole district, the best of whom are working at Khagra. The Bhaskars of Murshidabad are professional image makers, who during the declining days of the Nawab took to ivory carving. In 1888 the Murshidabad workers were declared to be perhaps the best in India, "fully displaying the finish, minuteness and ingenuity characteristic of all true Indian art." According to Sir George Watt they met a local demand for certain representations of the gods, but for some years past they have produced an assortment of table ornaments mainly for the European market. Murshidabad ivory work is remarkable for the absence of joins. In Royle's Lecture on the Arts and Manufactures of India, 1852, it is stated, concerning the ivory carvers of Berhampore, that their representations of the elephant and other animals, which were sent to the London Exhibition of 1851, were so true to nature that they might be considered the works of real artists. Mr. Dutt is not without hope of effecting an improvement in the industry, notwithstanding the absence of the support of the wealthy noblemen which the carvers formerly had. The establishment of the Murshidabad Art Agency is a step in the right direction for advertising and exhibiting specimens of the art. But it suffers from the fact that it has no outlet for sale in Calcutta. The workmanship of the existing craftsmen could be much more exploited than it is, if firms or individual capitalists would, as Mr. Dutt suggests, supply the Bhaskars with good ivory, purchase from them their products, suggest new designs, exhibit their specimens and advertise for them.

Manner of possible revival.

METAL-INLAYING (BIDRI WARE).

An art now moribund.

The art of inlaying pewter with silver, called after Bidar in the Deccan, whence the industry was introduced, prevails only in Purnea and Murshidabad. It has further degenerated since 1890. The Murshidabad Art Agency attempts by exhibiting specimens and by advertising in Calcutta newspapers to keep the industry alive. The art is explained at pages 46 and 47 of Watt's Indian Art at Delhi, at page 164 of Birdwood's Industrial Arts of India and in Mr. R. J. Hirst's article in the Proceedings of the Asiatic Society of Bengal for July 1907. In Purnea district Bidri ware is a dying craft and only one man, Mohan Sonar, is left with a fertile invention in designs. It is curious that in such a small art the engravers should be wholly dependent upon others who prepare the amalgum. These are Satua Kanseri and Mauju Kanseri of Belauri and Udhu Sau Kanseri of Katihar. Unless their art is studied and communicated, the industry will cease. Some students of the School of Art, Calcutta, which it is proposed, will in future have more direct connection with industrial art, should therefore be sent to study the processes, which should be repeated in the Calcutta school.

CLAY MODELLING.

A characteristic Indian art.

The clay models of Krishnagar have obtained considerable celebrity. In 1888 it was stated that the figures were instinct with life and expression, and that their pose and action were excellent. Mr. Collin expressed a regret that so much skill in modelling should be wasted on ephemeral works of art, as the material used was unbaked clay. As is natural to assume, the industry started from the making of idols for worship, from which grew the manufacture of toys and miniature figures. Sir George Birdwood said in 1880 that Indians had failed to develop the art of figure sculpture, and it was only because their ivory and clay and stone figures of men and animals were on so minute a scale that they excite admiration.

By 1903 Sir George Watt remarked that the Krishnagar modellers had failed to advance above the preparation of toys dressed in real clothes and had steadily raised their prices to a prohibitive extent. On visiting the centre of the industry, Ghurni near Krishnagar, I was prepared to be disappointed and I was sadly disappointed. There are five families left amongst whom the principal workers are, Rakhal Das Pal, C. C. Pal, Nibaran Chandra Pal, Bakeshwar Pal and Jadu Nath Pal. The first two have price lists printed in English, but they have no agency in Calcutta and not even one in Krishnagar. They are content to live on orders which they obtain indirectly. They have given up almost entirely the preparation of minute models in which they gained their reputation and have taken to relief work and to statues and busts on European models. The workers have strongly developed artistic talents, and it is a pity that they should use their talents on such unsuitable objects. They are, however, so very self-willed that it is hopeless to do anything with them. Mr. C. A. Radice, I.C.S., when Collector of Krishnagar, did his best to get them to prepare glazed figures which would stand exposure.

Abandonment of minute modelling.

ORNAMENTAL GLASS WARE.

In 1888 it was stated that the glass ware of Patna had acquired a reputation for graceful shapes and beautiful colours, and *The Journal of Indian Art* stated that Patna glass ware had curiously coloured specimens of considerable excellence. But when specimens were sent to the Indian Art Exhibition in Delhi in 1903 some of them were declared to be artistic and in good taste, but a large percentage was declared to be a miserable imitation of English ware, in bad taste and worse execution. The amber colour which frequently occurs in this ware is obtained from a mixture of the Sone river sand. The Patna ware is made from broken glass melted down. Ahmad Hussain and Zakir Mia are the only two workmen now left. The development of the glass industry must be sought for, as has been shown in Chapter III, on its industrial, and not on its artistic side.

A mimetic art.

STONE CARVING.

Stone carving was the subject of the monograph for 1904-05, and the Bengal Monograph was written by Mr. Havell, the Principal of the School of Art in Calcutta. A schedule attached to the monograph gives full details of the distribution of the art in the province. Stone carving is usually associated with Gaya, but Mr. Havell states that the carvers of Orissa acquired the most extraordinary technical skill in architectural decoration which Hindu art has known. As late as 1902-03, the Director-General of Archæology declared that the work of a modern stone-mason of Bhubaneswar did not fall much behind the old work. I found in Gaya that the stone work for the new *dharamsala*, which is being erected by Rai Surja Mull Bahadur, was being carved by stone workers imported from Mirzapore and Hathras. It is unfortunate that the skill of the carvers, who were originally imported from Jaypur in Rajputana to build the great Bishnupada temple, should be allowed to become atrophied from want of practice. There is now in Gaya only one man who does regular figure carving. The best bowls carved from Pathalkatti black stone are sold at one rupee eight annas, the bowls made from a medium kind of gray stone at ten annas; and there is an adulterated form of blackstone made from the slate stone of Dharhara in Monghyr district which is polished and blackened. There are also some stone carving done in parts of the Ranchi district. Mr Havell states that about seventy or eighty families prepare cheap stone utensils, which are used by colliery coolies at Raniganj. The earnings of carvers are from four annas to eight annas a day. Mr. Havell also states that the almost total extinction of the art is due to—(1) the exclusive use of European styles in public building; (2) the neglect of the study of Indian architecture in Indian colleges of engineering, and (3) the want of discrimination in public taste. The definite suggestion which he made in the monograph was that two of the inside doorways in the new Art Gallery, which is being erected on the Chowringhee Road in Calcutta,

Indigenous in Orissa.

Suggestion for encouragement of the art.

should be carved by the best men obtainable from Orissa. I regret, however, to find that nothing has been done on this suggestion.

Wood Carving.

Decline of the art.

A monograph was written in 1903 by Chevalier O. Ghilardi, who was then officiating Principal of the School of Art, Calcutta. The art is found in Monghyr, Bhagalpur, Patna, Gaya and Cuttack. Mention of wood carving in the Bishnupur subdivision of Bankura district is made in the Annual Administration Report of 1903-04. Patna has instances of pure Hindu work; Gaya has the characteristics of Burmese work. The Patna carvers have to content themselves now with making blocks for cotton printing. The wood inlaying in Monghyr was an industry brought in with the gun manufacturer. The Chevalier tried to persuade the worker to produce better work. The man's reply was that the people did not care to pay for it. I found at Monghyr that this worker obtains ebony from Jamui subdivision, and uses deer horns for inlaying. He took periodically a consignment to Calcutta and hawked his goods about the curio shops in Chowringhee. The conclusion of the writer of the monograph is that what is required is more the restoration to Indian art of all that was admirable in its earlier forms rather than a change in the classic traditions of artistic industries. The Calcutta School of Art must take its share in this work. The carpenters of North Bihar, as Mr. Collin pointed out, are still able to do any kind of ornamental wood work.

Shell Ornaments.

Shell bracelets are made at Dacca; but in Bengal proper only in Bankura and Birbhum districts, especially at Bishnupur in the former districts and at Karidha in the latter. The Sankaris of Karidha, it is said, have attained perfection in the art.

Embroidery.

An art capable of expansion.

The gold and silver embroidery of Patna is still well-known. Murshidabad and Patna have still skilled embroiderers. The embroidered caps of Patna and Bihar town are frequently seen worn in the Bihar districts. There are two kinds—*kamdani* and *sardoshi* for caps and the trappings of horses and elephants. The work, however, has not the reputation of the Lucknow or Benares work. Chikan work is still thriving. This is carried on in Calcutta, and in the Barasat subdivision. Mr. Collin indicated the business-like method of export. In Madras I found that it paid Belfast linen merchants to send their goods to Madras to be embroidered, principally by female labour. There is drawn-thread work done by the girls of the Bankura Wesleyan Mission; it is all exported.

Soap Stone Carving.

Plates, bowls, tumblers, images and the like are manufactured in thanas Chandil and Manbazar in Manbhum district, in pargana Dhalbhum in Singhbhum district and in the south-west of Ranchi district.

Horn Carving.

Horn carving is carried on commercially at Tirhetta Bazar, off Bow Bazar, Calcutta. A Mr. Lucy proposes to start a factory at Cuttack.

Lac Work.

As Mr. Collin said, lac bangles are made all over the country. There are stil 40 families working at Ilambazar in Bolpur thana in Birbhum district. Only three families are working at toys, the women of the other families dye cotton with shellac dye. The other centres for lac turnery are Patna and Murshidabad.

Lace Making.

This is an exotic industry in India, introduced by the missionaries, but Sir George Watt has stated that it has become at Quilon and other places in Southern India a popular industry. Fifteen years ago lace making by hand was an extinct handicraft in England; but to-day it is a recognized industry. Mr. Collin in 1890 recommended that it be taught to native ladies, as was done in the Nazareth Convent in Madras. Dr. J. A. Graham of Kalimpong started in 1905 a lace school at Kalimpong, where the hill girls, already adepts at knitting, have taken kindly to the industry under the teaching of an English lady expert. There are 124 girls working either at their homes or at the school in connection with it. Government has assisted by Rs. 600 down, and Rs. 89-8 a month for three years. Dr. Graham's proposals for the development of a scheme for making at Kalimpong a central school, where teachers might be trained for all parts of Bengal, is at present under the consideration of Government. Up to the present, pupils from Kalimpong have become teachers for the German Lutheran Mission at Ranchi and for the Mahila Shilpasram in Calcutta. Four other missionary agencies at Chaibassa, Jessore, Ballyganj and Calcutta have asked that students be trained at Kalimpong. I have seen the lace factories at Ranchi, Chaibassa and Krishnagar. That of the German Evangelical Lutheran Mission started in August 1907 as an offshoot of Kalimpong, has 32 pupils, who can earn from Rs. 2 to Rs. 6 a month. The patterns and thread are sent from Kalimpong. The Government grant is Rs. 77 a month. The Roman Catholic Mission at Ranchi is independent of Kalimpong. The Ursuline Convent have started lace making since August 1906. There are 60 girls making torchon lace under a European lady expert. The girls, who are aboriginal Kols, can earn as much as Rs. 8 a month. The Government grant is Rs. 50 a month. The work is done in a lofty and roomy building, and the conditions of hours of labour and of discipline have been carefully considered. At the Krishnagar convent there are 57 girls under training. The school deserves encouragement. The defect at present is that the market in all cases is a catch market. It is a good thing to introduce such pleasant, remunerative employment among native women. But a fixed market is wanted, similar to that furnished by the Irish Lace Depôt established in Dublin by the late Mr. Ben Lindsey for the cottage lace industry in Ireland; or the commercial methods of the Nagercoil School in Madras should be followed.

A craft with great possibilities.

But a commercial outlet required.

Toy Making.

Rude articles are still made in Patna and Kalighat; lacquered toys at Ilambazar.

Wood-engraving and Lithography.

There is an increased demand for engravers in Calcutta: the art is taught in the Government School of Art and in private schools.

CHAPTER VI.

INDUSTRIES DEALING WITH ECONOMIC PRODUCTS.

This head covers many industries which are under the special observation of the Agricultural Department, such as indigo and sugar. I propose to deal only with the lac, tobacco, oil and the alkali industries.

Lac.

The culture of the lac insect and the manufacture of shellac were not treated in detail by Mr. Collin. I have examined some of the factories in Chota Nagpur, and the literature on the subject, and venture to think that, as Mr. Puran

A helpful and progressive industry.

Improvements suggested.

Chand said at the Benares Industrial Conference in December 1905, the methods of working are crude. I suggest therefore more mechanical power. The new factories starting at Purulia are better fitted than the old factories. In the second place, the twisted cloth bags from which the heated exudation is scraped, contain some resinous matter, and under present methods the bags are boiled in alkali to remove the residuary matter This residue would be removed more effectively by a spirit and hence there is the necessity of obtaining industrial alcohol to which reference has been made under "Chemical Manufactures." In the Chota Nagpur tract the spirit which could be obtained would be that of the *mahuwa* flower, from which country spirit is distilled at present. In the third place, it should be realised that the lac is not now gathered for the dye, but that it is gathered for its resinous properties. This has been pointed out in Mr. Stebbing's recently published note on the lac insect. But the old process of manufacture continues, and at present there is much time and trouble taken in removing the dye from stick lac. Hence it is a matter for further enquiry as to the exact state in which the lac should be collected; for the lac from which the insects have swarmed contains less colouring matter. In the fourth place, I found that the District Officers were taking active steps to remove the nuisance which the washings create round lac factories. Now Mr. D. Hooper, F.I.C., F.C.S., at page 305 of the Monograph on Lac (Agricultural Ledger No. 9 of 1901) states that dye liquor is a rich source of nitrogen, and would constitute a valuable manure. At Ranchi I found that it had been so employed with considerable success: and I have advised elsewhere that the dye liquor be spread out on neighbouring cultivated fields; whereby the nuisance might be removed and at the same time the fields benefited. There is an example in the similar use of indigo washings. I am informed that it would not pay to consolidate the dye washings into poudrette cakes. There is a sufficient number of cheap manures in the market already.

One manufacturer told me that, comprehensive as Sir George Watt's monograph is, there is still much more that a practical maker of shellac ought to know. The industry is a good one in that it affords remunerative employment at many scattered centres to the working population, and is a complete antidote to the failure of agricultural crops. Certain Marwaris have within the last two years started manufacture in the Pakaur subdivision in the Sonthal Parganas: people flock in for labour, and earn four annas to twelve annas a day. At Jhalda in the Manbhum district I found that the factories had increased in ten years from 10 to over 30, employing about 1,500 people. In the whole district in 1907 there were 5,056 people employed in 122 factories, small and large.

The market is a sensitive one. It was affected by the American crisis of 1907 and by a strike in the hat manufacturing districts in England. (Reynolds and Sellers' Review of the Shellac Trade in 1907).

The trade both in stick-lac and in shellac and button lac is an enormous one, as the following figures show:—

Exports from Calcutta in lakhs.	1902-03.	1903-04.	1904-05.	1905-06.	1906-07.
Stick-lac ...	1·19	1·07	3·14	4·54	8·86
Shellac ...	157·15	217·49	258·37	264·52	289·60
Button lac ...	23·38	49·25	38·64	44·38	44·43

The industry has had one curious result. It has increased disputes about trees in Chota Nagpur and the Sonthal Parganas.

Tobacco.

The development of cigarette manufacture.

Many years ago endeavours were made by Messrs. Bogg, Dunlop & Co. to establish at Pusa in Darbhanga district tobacco growing and manufacture for the European market. The increased local demand for cigarettes has altered the situation. The Peninsular Tobacco Company, financed by an Anglo-American syndicate, who already have a factory at Karachi, have been building a large manufactory in the vicinity of Monghyr to make cigarettes for the million. Since May 1908 it is in working order. The Collector (Mr. Hugh McPherson) wrote in 1907:—"The new industry will increase the importance of Monghyr as a manufacturing and trading centre, there will be a considerable addition to the demand for labour, and the cultivators of the plant will get better prices for their crops and be stimulated to improve its quality. Tobacco is at present grown over 12,000 acres of land, mainly in Begusarai, and the area may be expected to increase considerably in the near future."

In Jessore district, tobacco curing was started by Mr. McLeod of Kotchandpore but was given up in 1907.

In the Rangpur district in the Eastern Province, the Rangpur Tobacco Company with a capital of one lakh is being floated.

The habit of cigarette smoking is spreading amongst all classes, and in Calcutta the manufacture of cigarettes is being undertaken with vigour. There are the Globe Cigarette Company at 20, Tangra Road, the East India Cigarette Company at 17, Baliaghatta Road, and the Bengal Cigarette Manufacturing Company, at 42, Shampukur Street. These firms have been importing cigarette making machinery, and have a well organized system of distribution. Ten cigarettes of the cheapest quality are being sold for a pice. It would have been better if indigenous manufacturing activities had been diverted into a more productive channel.

Oil Manufacture.

More power-mills required in the Bihar districts.

Outside the metropolitan area, within which are large mills like those of the Howrah Oil Mills Company, Ltd, of Ramkristopore, and the Gouripore Company, Ltd., of Naihati, there are very few oil mills in the province. I found one worked under European supervision at Berhampore, one in Nadia district, two under Marwaris and Bengalis in Patna district, two in Bhagalpur district, and nine in Burdwan district, the best of which is worked by Marwaris. The mills in Burdwan and Berhampore were working with imported seed: in one case the seed came all the way from Hathras. Hence the industry might be more developed in the Bihar districts, where seed is locally procurable. The total quantity of linseed which came into Calcutta from Bengal districts in 1906-07 was 128·7 lakhs. It is not necessary that there should be antagonism with the local *teli*. I found the following plant in different places:—a 20 horse-power engine working 54 mills; a 20 horse-power engine working 42 mills; a 16 horse-power engine working 32 mills; another 16 horse power engine working 26 mills, and 12 mills worked by an oil engine. The Victoria Mills Company of Bhagalpur was started by Babu Kirtti Chandra Chatterjee, a retired pleader; and after some vicissitudes it is now expanding to 50 mills. Some are worked in conjunction with other industries, such as flour grinding, rice husking, timber cutting and *surki* making. Babu Baij Nath Goenka of Monghyr has shown considerable enterprise in erecting a combined mill—a Stamford's corn grinding mill, a timber-cutting machine, a Carter's disintegrator, and an Empire oil mill. I think that at all the district and subdivisional head-quarters, in the *rabi* producing areas of the Bihar districts, there is room for combined flour and oil mills. There is a constant demand for good oil. The jails produce pure mustard oil, and can sell it above the local market rate. In some parts *sarguja* (*Guizotica abyssynica*, niger seed) is used with mustard seed in the proportion of 1 to 20, partly to assist the expression of the oil on account of its gritty nature, partly as an adulterant. In Calcutta besides the oil of the niger seed,

the oil of the poppy, sesamum, and cotton seeds are mixed with mustard oil; these, however, are considered by the Health Officer as not injurious to health.

It is desirable that the oil-cake should not leave the country. In Dr. Voelcher's words (Report on Indian Agriculture, paragraph 127) "the oil having itself no manurial properties, and being derived from the atmostphere and not from the soil, is a fitting object for export, but to send away the entire seed, or the refuse after the removal of the oil, is to send away the valuable manurial constituents contained in the seed; in brief, to export them is to export the soil's fertility." The following figures are relevant to these remarks:—

	Export from Calcutta in lakhs.	1905-06	1906-07
Suitable for export ...	Vegetable oils ..	25·6	28·5
Unsuitable for export	Oil-seeds ...	228·4	220·7
	Oil-cake manure ...	6·3	13·6
	Total ...	234·7	234·3

In the matter of castor oil I found at the hand-mill in Sewan considerable waste of power and material. There is room for the introduction of more economical devices, and capitalists have an opening here. I find that oil mills with mechanical power will pay in the Bihar districts, if the cost of supervision be not too high. The recently invented American Continuous Extracting Press requires an engine of 40 horse-power and can crush 25 maunds of vegetable oil-seed per hour. The remarks of Mr. K. N. Ramanujachari in *The Indian Review* for March 1908, on the Oil Trade of India indicate the number of subsidiary advantages arising from the increase in the local expression of oils; the increase in lubricants for increased machinery, and the application of oils for medicine, paints, varnishes and soap manufacture.

ALKALIS.

The imports of caustic soda.

It has been laid down by Sir George Watt that the industrial progress of a country can be judged of by the extent to which it produces the alkalis required by its own industries. Such industries as India possesses are, he continues, a century behind the times. Among alkalis there are ammonia and its salts, potassium and its salts, sodium and its compounds. One of the last, caustic soda, is required in many of the nascent manufacturing industries, and it is at present imported. It was hoped that it would be possible to obtain it by decomposition from common salt, sodium chloride, which India has in abundance. Sir George Watt, however, pointed out (Indian Alkalis, 1902) that the possibility of under-selling the product of the chemical works of Europe was doubtful.

CHAPTER VII.

MR. COLLIN'S PROPOSALS AND THE FUTURE DEVELOPMENT OF ARTS AND INDUSTRIES IN BENGAL.

THE text of Part I of this Special Report dealing with industrial instruction was, that it should be kept in view that the instruction which is given should enable pupils to earn a livelihood, and that the central institutions should be kept in the highest possible state of efficiency. In this Part II, dealing with industries and industrial arts, the text is that under present conditions it is for the small capitalist to take up in a business-like way the manufacture of articles for which there is a demand and the raw material of which exists in the country; and, in the case of industrial arts that what is required is greater publicity and an extended market.

Mr. Collin's chief proposals relating to industries were six in number. They were—

(1) the stimulation of native industries by the preparation or purchase of materials of public works in India, and not in England;

(2) the establishment of a school for drawing and design for industrial purposes and the circulation of designs amongst native workers;

(3) the circulation of practical instructions among leading braziers regarding moulding and working in dies;

(4) the introduction of schools for mat and basket work in localities where the business is carried on;

(5) the improvement of ornamental pottery; and

(6) the establishment of a weaving school at Berhampore in connection with silk and cotton weaving.

The principles of these proposals I repeat and support. The first will be considered below amongst my general recommendations. The second has been discussed under the subject of the Government School of Art in Part I and under the head of "Industrial Arts" in Part II. The third has been considered under the head of "Brassware" in Chapter III of Part II. So also the fourth proposal under the head of "Mat ware" in the same chapter. The fifth proposal is included in the general remarks under Chapter V of Part II, and the sixth proposal in connection with the improvement of the weaving of textiles has crystallised in the scheme for a central weaving institute at Serampore, which has been considered in Chapter III of this part and also in the summary in Chapter I of Part I.

There are certain general recommendations which I desire to make as to the manner in which Government may foster industrial development in this province.

1. One means of stimulating native industries lies in the preparation or purchase as far as possible, of materials for public works in India, and not in England. This is accepted in principle by Government; the desirability of translating good will into tangible orders for material is shown under the head of "Ironwork". The public still await the report of the Stores Committee. The value of Government stores imported into Calcutta for each of the last five years to 1907 has been:—3·22, 3·73, 2·67, 3·61, and 3·00 crores respectively.

2. It is advisable, if not absolutely essential, to have an expert Superintendent of Industries, or Director of Industrial Enquiries, as the appointment is called in the Bombay and Madras Presidencies. On the one hand there is required the sympathetic enthusiasm of one man rather than any elaborate scheme, if anything practicable is to be done. On the other hand it is not the fault of many would-be industrialists, but of their traditions and environment, that they lack initiative, co-operation of capital, business capacity and organisation. The feature of the present position is that it is not the Indian commercial classes who wish to engage in industrial enterprise,—commerce pays them better; but it is principally classes in whom the commercial instinct is not fully developed and who are finding that the pressure for existence in literary lines is too great. There are other reasons—some of which, but not all, are praise-worthy,—for the movement towards industrial development; but the fact remains that it is not the business heads in the Indian community who are being attracted to manufacture, but the professional and landholding classes. The real difficulty is to find an expert officer who would combine suitable scientific qualifications in engineering and chemistry with sympathetic knowledge of the country and of local conditions. The Bengal Government have made some proposals for such an appointment, and the subject is still under discussion. There were many causes of the comparative failure of the extension of the improved hand-loom in Bengal, but in my opinion the chief reason was that most of the agents employed were admittedly amateurs. An officer of Government is required not only to give the impetus, but to give advice and encouragement. In a sentence, a second Mr. Chatterton is wanted for Bengal.

3. Next, it is advisable for Government to improve technical instruction by the concentration of thought and expenditure on the central institutions. These are in Bengal the Sibpore Engineering College, the scope of which is much wider than its limited title would denote, and the Government School of Art. My proposals under this head have been given in detail in Chapter II of Part I. They are simply the development of the policy laid down by the Bengal Government in 1891. Concentration is also required in the industries which Government has selected as subjects for technical instruction. These are weaving and leather work, the proposals for which are to be found in Chapter III of this Part II.

4. The imperial technical scholarships have since 1904 been given in Bengal for the subject of mining engineering; and the advice of the mercantile community is to continue this subject for state scholarships. But only one state scholar can, as a rule, be selected in each year for each province. In the year 1908, however, two scholarships were given to Bengal in mining engineering and in leatherwork. I recommend that the Bengal Government should be prepared to subsidise, under certain conditions, the local association which has already sent abroad many youths of this province for technical education, and also that the Bengal Government should independently give scholarships to youths who wish to study the industry of leather-tanning in Madras or Cawnpore.

5. Encouragement should continue to be given to district exhibitions of industries and industrial arts. Hitherto assistance has been given only by the Agricultural Department and on account of agricultural products. The conference which the Industrial Education Committee held with Bengal officers on the 14th December, 1901, decided that such exhibitions were of great value, specially at *melas*. Sir George Watt suggested that money awards be given and that the best articles be purchased as samples. It is perhaps too much to say that a spirit of emulation has been excited. Some of the exhibitions would lapse entirely in the absence of official support. But still it is in this way that the local artisan can be encouraged, and that the local notables can be induced to take an interest in encouraging him. Some exhibitions have been started in connection with *melas*, as those at Dumka and Behta; some as an industrial show, as that of Bankipur; and some in conjunction with agricultural exhibitions, such as those at Bankura and Hooghly. There was also the comprehensive industrial exhibition in Calcutta in December 1906. There are now 20 districts out of 33 in Bengal, Bihar and Orissa in which annual exhibitions are held. *Melas*, indeed, must in Bengal for some time take the place of the other forms of advertisements, such as catalogues, circulars and newspapers, amongst the uneducated public. At the following places the exhibitions specially include industrial products:—Banjetia, Barasat, Basirhat, Kushtia, Jhenidah, Bankura, Chinsura, Midnapore, Suri, Kendrapara, Angul, Balasore, Sambalpore, Ranchi, Bankipore and Monghyr. A perusal of the reports of these exhibitions reveals an unexpected amount of inventive ingenuity principally in connection with weaving. This is likely to be lost, unless examined by an expert and made the subject of experiment at a Government weaving institute.

6. The local industrial arts can be effectively encouraged by a ready sale of the best articles, which arises principally from advertisement and publicity. Hence grants should be made for the inauguration of sample art ware depôts at district head-quarters, provided the local public take up the matter themselves, and in connection with the School of Art in Calcutta. In most districts will be found men of public spirit and culture. Samples of the work of those artists and artificers, who are ready to execute orders, should be obtained, and each sample should bear a note as to the maker's name and address and the price of the article. As Mr. Collin and others have said, native workmen are frequently unenterprising and usually dilatory; but still there is even now a difficulty in obtaining orders from want of publicity. There is an art agency at Murshidabad and another in Cuttack, which effect a little good; and I have recently obtained Government assistance for sample depôts which are being started at Bankura and Bankipore. I am simply repeating

what Mr Coldstream, a zealous Panjab officer, urged before the Art Conference of 1894 held at Lahore.

The subject is discussed at page 19 of Part I of this Special Report as well as in Chapter V of this Part II.

7. It is advisable that Government should disseminate more freely among the public the information which is obtained so laboriously by its officers. Let me point out that Mr. Collin's report of 1890 on arts and industries, full of excellent suggestions as it was, was never formally published. It was criticised by a few heads of departments, and in 1895, three years after its preparation when I asked for a copy, I was informed that it was confidential. A monograph on a selected subject has year by year been prepared; a copy has been forwarded to the Government of India; but few outside official circles have known that it has been published. The recent reports by Mr. Watson on leather-curing and tanning deserve the widest publicity. I found that the manager of a new tannery in Bengal had never heard of Mr. Rowland Chandra's exhaustive monograph on tanning published in 1904. Professor T. K. Gajjar in his address before the Industrial Conference at Surat in 1907 has drawn attention to the imperfect circulation of such literature. A Director of Industries would circulate much information through the press; he would know to whom particular information might be useful; and would doubtless copy the methods of the Agricultural Department in issuing leaflets. In the Appendix to the present report a small bibliography of books and papers dealing with industries has been prepared. The following is a list of Bengal industrial monographs, as prescribed by Government. Eleven out of the fourteen monographs have been written by Indian officers.

Year.	Subject prescribed by the Government of India.
1893-94	Brass and Copperware.
1894-95	Pottery and Glassware.
1895-96	Dyes and Dying.
1896-97	Cotton Fabrics.
1897-98	Woollen Fabrics.
1898-99	Silk Fabrics.
1899-00	Ivory Carving.
1900-01	nil
1901-02	Wood Carving.
1902-03	Tanning and Leather Work.
1903-04	Gold and Silverware.
1904-05	Stone Carving.
1905-06	Carpet Making.
1906-07	Iron Work.
1907-08	Paper Making.

8. Government should, I think, in addition to the provision of technical education, hold tests and give certificates of competency. There are two models to follow: the Madras system of technical examination (Calendar of the Commission for Government Examinations, Madras, 1907-08, page 64), or the Bombay system (Calendar of the Victoria Jubilee Technical Institute, 1908, page 60). In the former, the Government itself gives a certificate, a group certificate or a diploma for an immense variety of subjects ranging from practical telegraphy to horticulture and from carpentry to lace making. In the latter, the Technical Institute holds the examinations on behalf of the City and Guilds of London Institute, which has a list of no fewer than 74 subjects, ranging from soap manufacture to motor car machinery. As Bengal already gives, or is about to give, recognised diplomas in mechanical engineering, electrical engineering, mining, agriculture, and veterinary science, I suggest that the

new joint technical examination board for Sibpur College and its affiliated schools in both provinces might arrange to hold examinations in several of the subjects named in the City and Guilds of London list and grant certificates therein. I am sure from what I have heard that many employers as well as employees would welcome some such impartial proof of qualification. The argument that examinations would be held in some subjects in which no instruction is formally given is not conclusive. The system has prevailed in Madras for many years, and under its old name of "Higher Examinations in various branches of Technical Science and Art and in Industries" was one of the few things which met with commendation in the MacDonnell Memorandum of 1886.

9. It is finally submitted for consideration that in the distribution of honours for public service recognition might be given to those who have proved themselves public spirited captains of industry and who have piloted new industries successfully; and that rewards be offered by Government for certain inventions which might improve the quality and outturn of indigenous manufacture, such as for example, the adaptation of the fly-shuttle hand-loom for the weaving of tussar silk.

In the body of this report it will be found that it has been suggested that Government may appropriately assist in the following industries:—Weaving, leather manufacture, iron work, brass ware, and chemical manufacture. It has also been pointed out that there are openings for Indian capitalists in the following industries:—weaving, carpet weaving, pottery, carpentry, matware, leather tanning, cutlery, brassware, glass manufacture, chemical manufacture, dyeing, match making, soap making, perfume manufacture, lac manufacture and in the manufacture of vegetable oils.

Mr. Trailokya Nath Mukharji, whose opinion is of value as he was the founder of the Indian Industrial Association, informs me that in his opinion there are openings for the manufacture of umbrellas, paints, hosiery, braziery, soaps, candles, leather articles, lamps, and in the preservation of fruits. These are also recommended to the notice of capitalists. Mr. E. R. Watson, F.C.S., of the Indian Educational Service, whose researches in leather manufacture and in iron work are of great value, suggests that there is an opening in the following subjects:—Dyeing and cotton printing, soap making, lac refining, glass manufacture, varnish and paints, scents, cement, matches, tanning extracts, oil, enamelled ware, pencils, tobacco, silk weaving, rice bowls, and in sugar. Indigenous enterprise has already taken up the manufacture of soap, matches, pencils, tobacco and silk weaving. Mr. Henry T. Tozer, the industrial expert of the India Office, commends the indigenous manufacture of leather goods, silk goods, paper, iron and steel, and soap. Mr. S. J. Tellery, a recognized expert in Indian art industries, commends the revivification of fancy silk weaving, metal work, wood and stone carving, and states that the manufacture of the following might be worked with commercial success: woollen pile carpets, embroidery, enamelling on metal, and hand printing on cotton and silk.

Though Government assistance is expected and on certain lines has been granted to a considerable extent, yet both Indian and European official and non-official observers coincide in the view that it is by the addition of indigenous capital and brains to the indigenous inherited skill, both manual and artistic, of the Indian artificer that any improvement in indigenous manufactures, whether purely industrial or artistic, will ensue.

A few quotations are given. In the Viceregal Council, the Hon'ble Mr. Harvey, the Member for Commerce and Industry, said at the Budget Debate in March 1908:—

"Government have already done a good deal and are anxious to do more, but it is only with the co-operation of the people themselves and active assistance from capitalists of the country that great results can be obtained."

At the Industrial Conference for the United Provinces in August 1907, the Lieutenant-Governor, Sir John Hewett, said:—

"But if Government does its part, if it trains up skilled workmen and foremen capable of managing industrial businesses, the people must do their part, they must make up their minds to invest their capital in the development of the country."

In his address at the opening of the Chittagong Cotton Mill, Sir Lancelot Hare, Lieutenant-Governor of Eastern Bengal and Assam, said:—

"You have risked your own money—not I truly hope running an immensely great risk—and have not, as some have, called upon other people whom it is their fashion to represent as on the verge of pauperism to pay the cost of protecting an industry against its own inefficiency due to a conservatism which refuses to take advantage of improved methods."

Mr. Pramatha Nath Bose in his "Essays on Industrial Development" has written:—

"Besides the comparative scarcity of capital, the inadequacy of technical training and the lack of the amount of co-operation requisite for large undertakings, there is another and probably more patent cause which stands in the way of industrial development—the hereditary aversion of the higher castes for trades and industries which have hitherto been relegated to the lower, and in some cases, to the very lowest classes of the Indian society."

The Hon'ble Babu Bhupendra Nath Bose has stated in *The Indian World* for January 1908:—

"It is becoming more and more apparent that the realisation of our political ideals is to a great extent, if not wholly, dependent upon our progress as a nation in the paths of useful knowledge, industry and commerce, and upon our powers of co-operation, combination and organization."

Mr. R. C. Dutt, C.I.E., presiding at the Benares Industrial Conference of 1905, said:—

"We must change our old habit of universal cottage industries, and learn to form companies, erect mills, and adopt the methods of combined action, if we desire to foster or revive our industries."

We find also the same opinions expressed in organs of the press which ordinarily have different points of view. *The Statesman* confirms the findings of the Industrial Conference of 1907 that the obstacles to development are lack of adequate technical knowledge and lack of capital. *The Pioneer* says that the most hopeful sign for the future is the recent development of some interest in the subject of industrial enterprise, academical and intermittent as that interest is, and that when the leading politicians back their sentiments with capital and send some of their sons into industry the battle will be more than half won. To the would-be industrialist in Bengal, I can only say:—

"Ingeniis patuit campus, certusque merenti
Stat favor: ornatur propriis industria donis."

Enquiry as to the possibility or desirability of improving the cure of hides (and skins) exported from Bengal.

Information which led to this enquiry being taken up.

At a meeting of a Committee called together by the Bengal Government to discuss the starting of a weaving school at Serampore, it was mentioned by Mr. Nimmo, representing the Bengal Chamber of Commerce, that the export of hides and skins from Calcutta was a very important trade, and that it might be worth consideration by Government whether any instruction could be given to improve the cure of these hides (and skins), and consequently obtain a better price for them.

Mr. Earle made enquiries in England on this subject and understood from Dr. Gordon Parker, Director of the London Leather Industries Research Laboratories, Herold's Institute, Bermondsey, that the hides (and skins) exported from Calcutta were not properly cured, and that in consequence they fetched a much lower price than they would if cured properly.

Outline of the present enquiry.

I was in consequence placed on special duty by the Government of Bengal to make further enquiries to decide if it were desirable for this Government to start any form of instruction, in order to bring about a better cure of the hides (and skins) exported from this province. For this purpose I consulted the Secretary of the Bengal Chamber of Commerce, and from him obtained a list of the more important merchants exporting hides from Calcutta (viz., Messrs. Ralli Brothers, Messrs. Ernsthausen, Limited, Messrs. Cohn Brothers and Fuchs, Messrs. Thomson Lehzen & Co., Messrs. Schröder Smidt & Co., and Messrs Maurice Feilmann & Co.). I had interviews with representatives of these firms and also with a representative of the firm of Messrs. Wutow Guttman & Co., also hide merchants of Calcutta. I was able to inspect many different preparations and classes of hides in the godowns of these firms, and in company with Mr. Frerichs, of Messrs. Schröder Smidt & Co., I visited the hide market in Calcutta and saw the system of buying in vogue there. I visited the Calcutta Municipal Slaughter-house situated at Tangra to see there the method of flaying and the selling of hides. This is the only place within the municipal limits where cattle may be slaughtered. I also interviewed Messrs. Moll Schutte & Co., a firm who have formed an agreement with the Calcutta Municipality and take all cattle which die within municipal limits, flay them and work up the carcases for manure, tallow, etc. I visited the few tanners around Calcutta, viz., Messrs. J. Teil & Co., Messrs. Monteith & Co., the Bengal Tannery and the Calcutta Tannery, and obtained their opinions as to the efficacy of the Indian method of curing hides.

Having obtained an idea, from my enquiries in Calcutta, as to the most suitable districts in the mufassal to visit, I made somewhat detailed enquiries in the Darbhanga district, obtaining the assistance of the Civil officers of the district, and also of the managers of estates in that district. I also visited the Jessore district; and made enquiries from Mr. Cumming, the Collector of the 24-Parganas.

I visited Mr. Chatterton, the Director of Technical and Industrial Enquiries in Madras, who, in connection with the Madras School of Arts Chrome Tannery has practical experience of hides and leather; at the same time I was able to compare the treatment given to hides and skins exported from Madras with the cure of Bengal hides and skins. I also visited Major Forestier-Walker, Superintendent of the Government Harness and Saddlery Factory at Cawnpore; and during my visit to Cawnpore, I also met the managers of the various large private tanneries of that city, and Mr. Noronha, a hide merchant, who supplies all the hides to the Government Harness and Saddlery Factory and a large number to the other tanners of Cawnpore. I thus obtained the opinion of the largest tanners in India on the efficacy of Indian methods of cure.

In addition to these enquiries I have also corresponded with Dr. J. Gordon Parker of Bermondsey and Mr. A. Seymour Jones of Messrs. J. Meredith Jones and Sons, Limited, Leather Manufacturers, Wrexham. I availed myself of all the statistical information I could find concerning the hide and skin trade and had also occasion to call on Mr. Noel-Paton, the Director-General of Commercial Intelligence, to ask his opinion as to how far I was safe in drawing a certain deduction from trade statistics as published by his office.

Description of the present trade in hides and skins in Bengal, methods of curing, methods of collecting, etc.

The word 'hide' is technically used for the skin of a bullock or cow; the word 'skin' is used only for the skins of goats and sheep. The skins of buffaloes are always known as 'buffaloes.' A 'cured' hide or skin is one which has been treated in some way to preserve it temporarily until it reaches the tanner.

Hides are exported from Bengal *viâ* Calcutta cured in the following ways:—

Air-dried or flint-dried.—The hide as it is taken from the animal is spread out or pegged out on the ground with the 'flesh' side uppermost or stretched out on a bamboo frame and allowed to dry in the air. The hides come in this condition to Calcutta. Before export they are frequently 'arsenicated' by dipping in a very dilute solution of white arsenic in caustic soda and again allowing to dry. This arsenic dip is supposed to act as an insecticide.

Dry salted.—The hides, when taken from the animals, are spread out on the ground with the flesh side uppermost and on the flesh side a strong solution of 'Patna' or 'Muzaffarpur' or 'Earth salt' is poured. This is then generally worked into the hide by rubbing with a piece of stone or brick, and the hide is then allowed to dry. Further applications of salt solution or mixture of salt and water are subsequently given, and the hide again allowed to dry. Patna salt and Muzaffarpur salt and earth-salt are apparently all the same thing,

essentially an impure sulphate of soda mixed with earth. The hides come in this condition to Calcutta, and are not further treated for export.

'Skins' are either *air-dried* or *dry-salted* in much the same way as hides. In either preparation the skin is stretched out on a board to which it is pinned by a considerable number of nails all round the edge. It is the usual practice to stretch the skins quite tightly in this way

Buffalo hides are almost always *dry-salted*. Those which are not so cured are *air-dried.*

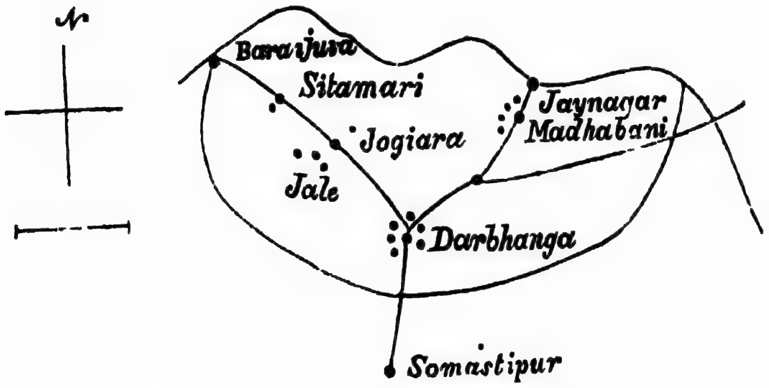
Hides and skins are collected from every district in Bengal and a large number of these hides and skins are brought to Calcutta for export.

Hides may be divided into two classes—'*slaughtered*' and '*dead*'—the former being from slaughtered animals and the latter from animals which have died from disease or old age or by accident. The number of slaughtered hides collected is probably very much smaller than the number of 'deads.'

In every district where there are Muhammadans there will be found villages in which cattle are slaughtered. In the Darbhanga district I visited two such villages near Darbhanga, Kuruni, 8 miles distant, and Jale, 15 miles distant, and one such village, Bowi or Bowri, 2 miles from Madhubani. The butchers in these villages send out men or go to neighbouring 'haths' within a radius of about 12 miles and buy old cattle, which are no longer fit for work or for milking. These cattle are chiefly bought from Muhammadan cultivators, as a Hindu is prevented by his caste from selling his cattle for slaughter. The butcher may get a certain number of cattle from Hindus by misinforming the sellers as to what he intends to do with the cattle, but the number obtained in this way is not great. After these cattle have been slaughtered, the meat is sold in the village, and either the butcher air-dries the hides himself or he sells them to the owner of a hide godown in the 'green' state (a hide just as it is taken from the animal is termed 'green'). In each of the villages above mentioned from 6 to 10 cattle are slaughtered daily. The hide is much the most valuable part of the animal. The whole animal will, on the average, be worth about Rs. 7, and the hide of this animal will be worth about Rs. 5.* If the butcher sells his hides 'air-dried' to the owner of the hide godown, he appears to get from 10 annas to 12 annas per lb. according to quality and cure.

In the towns possessing Municipalities there are usually Municipal slaughter-houses in which the butchers of the town must slay their cattle. In Bihar and in and around Calcutta a large number of cattle are slaughtered. Thus, taking Darbhange as a typical small town in Bihar, here from 30 to 100 cattle are slaughtered per diem, In Calcutta itself all cattle must be slaughtered at Tangra. Here about 250 cattle are slaughtered every day. Around Calcutta there is a belt of smaller Municipal slaughter-house, *e.g.*, Cossipore and Dum-Dum. and from Calcutta and neighbouring slaughter-houses about 600 hides per day are obtained. From the larger slaughter-houses the hides are always sold at once in the 'green' state to the owners of hide godowns. These 'green' hides may be sold by weight, as at Darbhanga, or for a lump sum, as at Calcutta, where the hide is bought while the animal is still alive. At these larger slaughter-houses the butchers have no difficulty in disposing of their hides—the buyers come down to the slaughter-houses and are very keen on getting the hides.

In every case the slaughtered hides are first purchased from the butchers by Muhammadan *biparis*, owners of small hide godowns. These small hide godowns can be found almost anywhere in Bengal. As we shall see later they are the first step in the collecting agency of 'deads' also. The number of hide godowns and their distribution within the Province may be judged from the following examples:—



(*1*) *The northern portion of the Darbhanga district* (roughly the area marked out in the accompanying sketch map).

Around Darbhanga town there are three large godowns and at least three smaller ones. At Jale, near Jogiara, 15 miles north-west from Darbhanga on the Darbhanga-Baraignia Railway, there is a small godown. Ten to 15 miles further up the same railway line at Sitamari is another godown. At a village Bowi or Bowri, near Madhubani, about 15 miles north-east of Darbhanga, on the Darbhanga-Jaynagar Railway, there are 3 or 4 small godowns.

None of the godowns are more than a few miles from the railway.

(*2*) *The Jessore district.*—This is a rather large district, and is subdivided into five subdivisions, viz., Sudder, Narail, Magurah, Jhenida and Bongong In the Sudder subdivision there are two godowns at Jessore and one at Kaliganj. In the Jhenida subdivision there are two godowns, and without doubt the other subdivisions are equally served in this way.

* FOOTNOTE.—These and other figures given as current prices in this report refer to the period of my enquiry, viz. June, July and August 1907.

From these godowns the hides are generally sent direct to Calcutta. The smaller *biparis* may sell to larger *biparis*, but the majority send direct to Calcutta, to an *aratdar* or commission agent. In Calcutta there are a large number of hide-godowns belonging to these Muhammadan commission agents, mostly situated in the neighbourhood of Chitpur Road and north of Lal Bazar These men offer parcels of 1,000 or more for sale to the European hide merchants. Every morning these men send notes to the principal European firms showing what parcels of hides they are offering for sale, and these firms send representatives to inspect the parcels and buy. The hides are sold by private auction, each firm making an offer which is not disclosed to the other bidders. Generally a sample batch of 50 is examined, and the average weight of the hides is suppled by the *aratdar*, and on this the firm's buyer makes his estimate. If the whole batch does not come up to the sample shown, a rebate has to be paid by the *aratdar*.

So much for the preparation and collection of slaughtered hides by native collecting agencies.

As has been already mentioned, a Hindu raiyat is prevented by his caste from selling cattle for slaughter, and when a beast becomes ill or too old for work or milking he desowns it and turns it loose to die. As soon as it dies the carcase becomes the property of a *chamar*. Every zamindari is divided up into more or less well defined areas among the *chamars* on the zamindari, and thus each *chamar* has an area within which he is entitled to all carcases. For this right the *chamar* pays an annual fee to the zamindar. The *chamar* skins the carcases and generally cures the hide himself, making an air-dry preparation. When he has collected 3 or 4 hides he takes them to a small hide godown and sells them. In the neighbourhood of towns where there are fairly large godowns the *biparis* may send out men who will visit villages within, say, an area of 12 miles and obtain the hides within this area in a 'green' state. The *chamar* sells his hides to the *bipari* either by weight or as so much per piece. Within areas in which there is any competition for the hides the system of selling by weight appears to be generally in vogue. The price mentioned both by the *chamars* and by the *biparis* and paid to the *chamars* ran for from 7 to 9 annas per lb. The deads are disposed of by the small *bipari* in just the same way as has been already described in the case of 'slaughtered' hides.

This collection by native agency may be called the 'normal' method of collection.

The best known classes of hides which came into Calcutta in this way from Bengal are called *Patnas*, *Darbhangas*, *Ranchis*, *Sambalpurs*, *Cuttacks*, and *Mehapurs*. Roughly speaking, the name denotes the district from which the hides come, though by usage these names are coming to some extent to indicate classes or preparations.

Patnas are the better class of hides from Behar. They are 'slaughtered' hides and are 'air-dried' preparations. They have been taken off carefully, so that very little flesh remains on the hide, and have been carefully dried on bamboo frames. These fetch about Rs. 18 per 20 lbs., and as the average weight will run to about 7 lbs, 20 pieces will fetch Rs. 120 to Rs. 130.

Darbhangas, of the better class, slaughtered, are similar to Patnas There are, however, very many 'deads' known as Darbhangas, and the preparation of these is poor. A great deal of flesh is left on the hide, and it has been very badly stretched in drying, so that the preparation has an untidy crumpled appearance. These poorer class 'Darbhangas' fetch Rs 13 to Rs. 15 per 20 lbs. With the average weight running to 7 lbs., this means that 20 pieces fetch Rs. 90 to Rs. 100.

Ranchis are a class of small 'deads,' air-dried and not well prepared. Fetch about Rs. 15 per 20 lbs, and as the weight runs between 5 and 6 lbs., 20 pieces fetch only from Rs. 75 to Rs. 90.

Sambalpurs are also a poor class of air-dried 'deads,' fetching only Rs. 13 to Rs. 16 per 20 lbs. and about Rs. 80 per 20 pieces.

Mehapurs are hides collected from the districts in the Presidency Division, such as the 24-Parganas, Nadia, Jessore, Khulna. These hides are collected by the *biparis* in the 'green' state from the *chamars* and 'dry salted.' These fetch about Rs. 10 per 20 lbs., have an average weight of 10 lbs., and consequently fetch about Rs. 100 per 20 pieces. As they are salted, they weigh about 1½ time as much as if 'air-dried.'

Besides the collection by native agency as has been described, a considerable number of hides are now collected by the European firms by means of their own agencies in the district. Thus, Messrs. Schroder Smidt & Co. have an agent at Dinapore and he collects hides over a large part of Behar; in Darbhanga several of the Muhammadan hide merchants prepare hides especially for Messrs. Schroder Smidt & Co. A collector goes round from Dinapore and visits these godowns periodically The preparation for Messrs. Schroder Smidt is better than for the Calcutta market, less flesh is left on the hides, and they are carefully stretched and dried. Some of the *biparis* considered that it paid them to sell to Messrs Schroder Smidt & Co., whilst others preferred to sell in Calcutta.

The hides as bought in Calcutta are sorted, trimmed a little, arsenicated if 'air-dried' cures, and baled for export. The classification of Calcutta hides is very complex. They are classified in the first place according to the locality from which they are obtained, in the second place into first, second, thirds, fourths and fifths according to the quality of the hide and cure, absence of sores, brand marks, hair-falls, etc, in the third place according to weight. Each of the large exporting firms has its own 'marks' which are known on the home markets

About 45 per cent. of the Calcutta hides are sent to Germany. The next largest consumers are Italy and Austria-Hungary. Spain, United States of America, France and the United Kingdom are comparatively small consumers. The United Kingdom takes only 2-3 per cent. The largest quantity of 'buffalo' hides are taken by the United States, and the States are also the largest consumers of skins. The figures for 1904-05 give a general idea of the trade since 1902, and in this year the following countries took the following percentages of the Calcutta hides and skins, reckoned by number. (Figures calculated from tables in Report on Maritime Trade of Bengal, 1904-05):—

	Hides per cent.
United Kingdom ...	2·1
Germany	45 2
Italy	18·8
Austria-Hungary ...	15·1
Spain	7·8
France	2 0
United States ...	7·6
Other countries	1 2

	Skins per cent.
United Kingdom ...	6·2
France	5·5
Italy	1·8
Germany	2·0
United States	81·8
Other countries	2·7

I cannot speak with any personal knowledge of the method of disposal of the hides after they reach the consuming countries. I understand that they are in the first place bought by auction, and that the brokers in this trade are chiefly Jews. It appears that the hides have still to pass through several hands before they reach the actual consumers, *i.e.*, the tanners The Calcutta merchants may be called on for a 'refund' if the hides are found, subsequent to purchase, not to come up to specification. Such matters are settled by arbitration.

The census figures do not give much idea as to the concentration of the trade of preparing hides for export. The number of *chamars* in a district forms no criterion, as many *chamars* are entirely engaged in agriculture. It might be thought that the *number of sellers of hides, horns, bristles and bones* would be more or less proportional to the extent of the trade in any district.

The 1901 census gives :—

District.	No. of sellers of hides, etc.

According to these figures the districts in which the trade in hides is largest are (1) Purnea, (2) Khulna, (3) Jessore, (4) Monghyr, (5) Calcutta, (6) Darbhanga. This does not agree with my own observations either in the district or in the Calcutta market. Ranchi hides, *e.g.*, are a prominent class in the Calcutta market, whilst according to these figures the hide trade in Ranchi and in Chota Nagpur would appear to be very small

The cattle population of a district should give a very fair idea of the possible size of the hide trade, but I am not aware that any figures of cattle population are available.

As is well known, the total export trade in hides and skins from British India is enormous and has increased very rapidly of recent years. At the same time the price of hides has also increased by leaps and bounds.

The following figures give the total exports of raw hides from British India (in trade figures "raw" means not tanned) :—

Year.	No. of hides.	Value.	Average price per hide.
		Rs.	Rs.
1896-97	7,427,943	254 lakhs	3·4
1897-98	10,072,470	337 „	3·3
1898-99	8,864,329	294 „	3·
1899-1900	13,474,323	492 „	3·6
1900-01	14,654,818	526 „	3·6
1901-02	7,972,097	287 „	3·6
1902-03	8,210,524	301 „	3·6
1903-04	8,261,198	316 „	3·8
1904-04	8,722,520	370 „	4·2
1905-06	11,531,809	523 „	4·5

(During the last year, 1906-07, the total exports of hides and skins from British India were larger than ever and valued at more than 10 crores of rupees.)

About 85 per cent. of all hides exported from British India are exported from Calcutta, and of these about 60 per cent. are collected from Bengal. This is shown by the following figures for the year 1904-05 (taken at random) :—

	Hides. Wt.	Value.
		Rs.
Total Indian exports	709,261 cwts.	370 lakhs.
Share of Bengal	601,107 „	322 „
Imported by Rail and River into Calcutta (total).	637,765 „ 892,872 mds.	193 „
Imported by Rail and River into Calcutta (from Bengal).	5,33,981 „	110 „

These figures are sufficient to show that the trade in hides is one of the most important export trades in Bengal. It is second in value only to the jute trade.

I made it a special point to decide to whom the money ultimately goes which is paid by the countries for whom the hides are exported from Bengal. I found rather to my surprise that there was not such a very great difference between the prices paid by the European firms in Calcutta and the prices paid by the small Muhammadan *biparis* to the first owners of the hides, *i.e.*, the *butchers* or the *chamars*. At the time of my enquiry the Calcutta prices could be taken as Rs. 18 per 20 lbs. for very best air-dried cure, Rs 16 as an average price and Rs. 13 as the lowest. Compare this with the prices already mentioned as paid in the district to the *butchers* and *chamars*, viz., from annas 10 to annas 12 for slaughtered hides and from annas 7 to annas 9 for "deads." We might take 12 annas as the top price paid in the district, annas 9-6 as the average and annas 7 as the lowest ordinarily paid, or being converted, Rs. 15, Rs. 11-14 and Rs. 8-12, respectively, per 20 lbs.

	Price paid to *butcher* or *chamar*.	Price paid to European firms in Calcutta.	Difference (charges for collecting and collectors' profits).
	Rs. A.	Rs. A.	Rs. A.
Best *air-dried* cure per 20 lbs.	15 0	18 0	3 0
Medium quality ditto	11 14	16 0	4 2
Worst quality ditto	8 12	13 0	4 4

We may reckon, then, that of the money paid by the European shipping firms in Calcutta, about 25 per cent. goes to the Muhammadan *aratdars* and *biparis* for collecting the hides, and the remaining 75 per cent. to the original owners of the hides, *i.e.*, the butchers or the *chamars*.

In the case of a slaughtered hide the butcher had paid a fair price to the agriculturist for the beast, and so we may consider that a fair proportion of the money goes to the owner of the beast and compensates him for the loss of his beast. In the other case the dying of his beast is a dead loss to the Hindu raiyat and an almost clear gain to the *chamar*, the only set-off to this gain being the annual fee the *chamar* pays to the zamindar for the right to all carcases over a certain area.

It should be noted that without any outside help the *chamar* population must within the last 10 years have quite doubled its income, owing to the increased demand and increased prices paid for hides.

I do not attempt to give an estimate of what proportion of the money paid by European countries for Calcutta hides goes to the Calcutta shipping firms to pay them for handling and shipping. These firms themselves say that they make from 3 to 5 per cent. profit.

It is generally admitted that the quality of the hides exported from Calcutta could be much improved by a better cure.

The Calcutta hide merchants are of opinion that the air-dry cure, if carefully carried out and followed by dip in arsenic before export, is perfectly satisfactory. But as generally carried out this cure is unsatisfactory. As has been already stated, hides are bought by weight in Calcutta, and very generally also in the district. In consequence the butcher and the *chamar* in flaying leave flesh on the hide in order to increase the weight. It is true that by doing so they are only able to sell their hides at a lower rate per lb., but they consider that nevertheless they generally gain by leaving on the flesh. The Calcutta merchants are generally of opinion that the butchers and *chamars* and small dealers lose by thus preparing 'fleshy' hides, but they find it very difficult to convince them of this. A further discussion of the rates obtainable for 'good' and 'bad' cures will be found in the following paragraph.

Leaving flesh on the hide can only have a bad effect. It prevents the hide from drying so quickly as it otherwise would; and unless a hide is dried quickly in this country putrefaction is certain to set in. The result of the putrefaction may or may not be visible at first, but it is sure to show up in the first operations preparatory to tanning. Again, even if the hide has been dried once, the flesh is very likely to take up a little moisture subsequently and putrefy or serve as a nest for maggots. It is very common to find a batch of very fleshy hides in which large areas of each hide have been eaten away by this maggot, leaving only the epidermis, so that these areas are as transparent as tissue-paper. This maggot is, I believe, the larva of a small beetle *Dermestes vulpinus*.

Another frequent defect in the 'air-dry' cure as practised in India is that the drying is effected too rapidy and in too strong a sun. This causes a blistering of the hide and, moreover, the outer surfaces become quite dry, hard and impervious to moisture before the inner tissues have dried, and thus the inner tissues are as it were sealed up wet and subsequently putrefy. The dry should be carried out by stretching the hides on bamboo frames and standing the frames in an open shed through which a free current of air can pass and gain access to both the 'flesh' and 'hair' sides of the hides. The method of drying the hides by stretching them out 'flesh' side up on the ground is unsatisfactory, as the hair side in contact with the ground will remain wet and probably putrefy whilst the flesh side is drying.

What tanners think of Calcutta 'air-dried' hides can be judged from the fact that Calcutta tanners invariably use 'green' hides from the slaughter-house, that the Government Harness and Saddlery Factory at Cawnpore use only 'dry-salted' hides, and that Mr. Chatterton in the Government Chrome Tannery at Madras carefully tried a batch of good quality Patna hides, but found they turned out very badly in the 'soaks' and in 'lime.'

Professor H. R. Procter in his 'Principles of Leather Manufacture' (page 41) says:—"Drying is a very common method of preserving hides as well as other putrescible matters . . . . as applied to hides, it is, to the tanner, one of the least satisfactory modes of cure, involving very considerable difficulties in bringing hides back to the moist and swollen condition which is necessary at the outset of his operations . . . great differences are found in the ease with which dried hides soften, according to the way in which the drying has been accomplished, the difficulty being greater the higher the temperature which has been used. The best mode of dry is to hang in the shade in a good draught of cool air with the flesh side out. Hides or skins dried in a tropical sun are not only difficult to soften, but are liable to damaged portions which either refuse to soften or blister and go to pieces in liming owing to the structure of the hide being destroyed by heat, the outer surface drying first and forming an impervious layer which hinders evaporation from the inside, so that the moist interior becomes melted, while the outside appears quite sound. Such injuries are often only to be discovered by soaking and liming. Very similar damage may occur from putrefaction of the interior after the outside has become dry, and to get good results the drying must be gradual but rapid, especially in hot climates."

Fleming in his "Practical Tanning," page 363, says much the same thing, emphasising especially the difficulty of getting 'air-dried' hides back into a perfectly soft condition without putrefaction setting in at some point.

Villon "Treatise on the Leather Industry" translated by F. T. Addyman, page 22 speaks of the putrefaction which sets in on the under side of hides which are stretched out on the ground to be dried by the sun.

It is thus clearly submitted on all sides that the air-dry cure as at present practised on hides exported from Calcutta is most unsatisfactory. The point to decide is whether it would be better to continue the present system and insist on the necessary precautions being taken as to fleshing properly and drying carefully, or whether it would be better to introduce some other method of cure.

I think I am right in saying that the Calcutta firms are largely responsible for the prevalence of the 'air-dried' cure. A hide cured in this way has the least possible weight and thus freight is saved. Also the difficulty of estimating the weight of 'curing' material is avoided when no 'curing' material is employed.

The other method of cure which is adopted in Bengal, viz., the *dry salted* cure, is not so much in favour with the Calcutta hide merchants, because the curer can very materially increase the weight of a hide by putting on excess of 'earth-salt,' which is a mixture of certain salt and mud—and it is difficult to estimate exactly how much of the weight is due to the salt. Also it is easy to hide defects on the flesh side by a liberal plaster of salt and mud. It is, however, probable that from the tanner's point of view the 'dry-salted' hide is preferable to the 'air-dried." This may be judged from the fact that the Government Harness and Saddlery Factory at Cawnpore takes only dry-salted hides. The Superintendent, Major Walker, is not however satisfied with the salt used, and is thinking of establishing a collecting agency by which the hides will be cured with salt provided by the factory. He thinks that *Sambhar Lake salt* would be a very suitable salt for dry salting. The earth salt used at present contains impurities, such as iron pyrites, and makes iron stains on the hides. Mr. Wolf, a large exporter of skins in Madras, uses Madras sea salt for his cure and considers this a very satisfactory curing salt, being 'mild' in its action. He said that neither Sambhar Lake salt nor the rock-salt obtainable in the Punjab was satisfactory for curing as both made the skins 'tinny' and wanting in 'nature.' A salt which is satisfactory for curing skins would be equally satisfactory for hides. I consider Mr. Wolf's opinion of value as, unlike the Calcutta hide merchants, he buys especially for a firm of tanners, viz., Messrs. Blumenthal of Paris, and is thus able to get the opinion of the tanners on any preparation he may send them.

Dr. J. Gordon Parker, Director of the London Leather Industries Laboratories, is very emphatic that dry-salting with a pure salt would be the most satisfactory method for curing Indian hides. He writes:—"I maintain that the best method for your country would be the salting of the hides on the flesh side, laying them in pile for two or three days for the salt to penetrate, and then drying them in a shady place, not in direct sunlight. It is the heat which in some cases does the harm. I consider that the plastering with alkaline earths and clay is a mistake, and I do not consider that the dipping in weak arsenic is much good. I consider that salt or sulphate of soda (Glauber salt) would be equally effective, and would suit your purpose better."

As a conclusion based on these technical considerations, I decide that the best cure would be dry-salting with Madras sea-salt, rubbing in the salt instead of pouring a solution over the hide, but that in cases where this method could not be introduced the cure would be very greatly improved by simply flaying clean, *i e.*, not leaving flesh on the flesh side, and drying the hides on bamboo frames under open sheds

The question of 'flaying' has already been mixed up with the question of 'cure,' as it has been stated that very generally flesh is left on the hides and is very likely to spoil the cure The hides from Tangra and the other slaughter-houses near Calcutta are, however, free from this defect but err in the opposite direction—the butchers in flaying score the hides with the knife. This appears to be simply carelessness and would probably be much more easily remedied than the other defect, viz., leaving on flesh, which is done with a definite purpose. I have watched the operation of flaying both at Tangra, where the hides are scored, and at Darbhanga, where too much flesh is left on. The scoring is *not* due to want of time as the Darbhanga butchers flay in about the same time as the Tangra butchers. The butchers are careless because it has become the custom to flay in this careless manner in the neighbourhood of Calcutta, and because, owing to the keen demand for hides of all sorts, they can get a good price even for these carelessly flayed hides. There should not be any difficulty in flaying without scoring even with a naked knife, but to avoid scoring even in rapid flaying by careless butchers, various flaying knives have been invented, *e.g.*—the Brien's skinning knife, Daiso's knife and the Negass electric skinning knife (*vide* Villon *loc cit*, pages 12-13).

It is not, however, so certain that a much better price would be obtained for better cure.

The English experts are enthusiastic on the subject of improving the cure of Indian exported hides and say that if the hides were better cured they would fetch much better prices. Thus Mr. A. Seymour Jones writes:—"I would advise you . . . . to devote your attention . . . . to the improvement of local conditions of cure, &c. . . . . The Government of India could do very valuable work by educating the native in a simple way, and show that that way means more rupees and not annas for his product with a world waiting to buy his wares. The first step should be flaying, curing and packing and instructions given how to dispose of his product to best market advantage." Again he writes:—"Most of the hides and skins of India are exported, and if

you can succeed in getting some improvement in flaying and cure, you at once increase the price and so benefit India." Dr. J. Gordon Parker writes "*re* the curing of Calcutta hides, what I endeavoured to convey to Mr. Earle when he called here was that thousands and thousands of pounds were lost yearly owing to the careless curing of Indian hides"

The Calcutta merchants are by no means so optimistic; they consider that it *would* pay the small hide merchants and the butchers and *chamars* to cure better, but they admit that the price they are able to pay for better cure is not so very much greater than the price paid for the poor cures. The trade has itself been able to effect improvements to a certain extent. The cure of the North-West hides and of "Cuttack" hides is generally admitted to have been improved in consequence of representations by the Calcutta firm; and it can be very plainly seen at Darbanga at the present day that Messrs. Schröder Smidt's agency in Behar is causing a number of hides to be better cured.

The following figures, supplied to me as examples by the Calcutta firms, give an idea of the difference in prices paid for good and bad cure:—

(1) An ordinary badly cured "Ranchi" hide, average weight 6 lbs., will fetch Rs. 15 per 20 lbs., or Rs 90 per 20 pieces. The same hide, if fleshed more cleanly and well cured, would have an average weight of 5 lbs. and fetch Rs. 17 per 20 lbs., or Rs 85 per 20 pieces.

(2) An ordinary badly cured "Darbhanga," average weight 7 5 lbs., will fetch Rs. 13 per 20 lbs., or Rs. 97-8 per 20 pieces. The same hide, properly cured, would weigh 7·0 lbs. and fetch Rs. 15 per 20 lbs., or Rs. 105 per 20 pieces.

The first example shows that the *chamar* would lose by flaying cleanly, whilst the second shows that he would gain a little. And all the numerous examples given me were much the same; sometimes the calculation seemed to show that the *chamar* would gain a little by better cure; sometimes to show that his present methods paid him a little better. I understand that this state of affairs is due largely to the present great demand for hides and to the competition among the Calcutta firms.

The present inferior cure of hides cannot be considered as generally due to ignorance on the part of the *chamars* and butchers.

The 'scoring' of hides prevalent in the slaughter-houses around Calcutta is due to carelessness and indifference or ignorance. But the general prevalence of fleshy hides is due to a desire on the part of the small hide merchants and the butchers and *chamars* to increase the weight of the hides. This they will admit quite freely and will explain the point by means of numerical examples, *e.g.*, a butcher at Jale in the Darbhanga district explained that if he left a certain amount of flesh on a hide it would weigh 8 lbs., for which he would get 10 annas per lb., or Rs. 5 for the hide, whilst if he took off all the flesh it might only weigh 6 lbs. For this better cure he would get 12 annas per lb., yet for the whole hide he would only realise Rs. 4-8. The same butcher said that he knew perfectly well how to cure properly.

For the same reason, viz., to increase the weight, dry salted hides are often plastered with an excess of earth salt.

Proposals for improving the present situation.

It appears self-evident that the *tanner* would be willing to give a better price for better cured hides than for badly cured hides, and the present state of affairs in which the Calcutta merchant is duly able to give a very slightly better price for better cure must be regarded as 'artificial' and not necessarily permanent. The task to be faced is two-fold, viz:—

(I) To remedy the present artificial state of the Calcutta hide trade, so that better cured hides shall fetch an appreciably better price than badly cured hides in this market.

(II) To teach the butchers and *chamars* to cure in the best manner, and to show that it pays to cure in this manner.

My proposals for the solution of the first of these problems are as follows:—

(Ia) *To address the Calcutta hide merchants through the Bengal Chamber of Commerce and strongly urge the formation of an Association of Hide Buyers.*

Such an Association could issue a notice that after a certain date hides, which were not properly fleshed, would not be bought by any firm in the Association. A European Inspector could be appointed by the Association who would pass or condemn hides intended for sale in Calcutta.

(Ib) *To address the principal Associations of Tanners in Europe and America, pointing out clearly the present artificial state of the Calcutta hide trade, and urging them to take such steps as will ensure a normal condition of this trade.*

They should insist that their requirements in the matter of 'cure' shall be more carefully attended to by the collecting and distributing trade. If the tanners bought by means of their own agencies, or to a certain extent amalgamated with the hide merchants, the interests of the collecting and distributing trade would be one with the interests of the tanners, and the object would be at once effected.

And for the solution of second problem :—

(IIa) *To start a demonstration flaying and curing department in connection with the Tangra Slaughter-house, Calcutta.*

For this purpose we should need to acquire a piece of land near the Tangra Slaughter-house, and erect on it a few sheds This would be our curing yard and hide godown. We should need a European Superintendent, with a knowledge of cattle and a working knowledge of vernacular, to be in charge of the department. Under him would be the native flayers and curers. Messrs. Schröder, Smidt & Co. are willing to supply us with a few men having a sound knowledge of flaying and curing. It should be necessary to try different methods for the disposal of the hides—(1) to sell the hides in the green state, fetching a better price than the ordinary Calcutta slaughter-house hide would demonstrate to the butchers the advantage of the flaying without scoring; (2) some hides should be cured in the most approved manner with Madras sea-salt and offered for sale both in Calcutta and on the home market The first sales in Europe would be experimental, and would not be expected to be very profitable until some definite arrangement for disposal had been arrived at. Professor Procter, Dr. J. Gordon Parker and Mr. A. Seymour Jones would no doubt help us in placing our 'cure' on the home market.

I have gone as carefully as possible into the details of cost of up-keep of such a department, expenditure and receipts, and I am of opinion that after the Superintendent has gained his experience of the business, the department should be a paying concern.

(IIb) *To start a collecting agency over a fairly small area in some district; and when the agency is properly started, give instrutions to the* chamars *within the area to 'cure' more carefully, telling them at the same time the higher price the agency will pay for the better cure.*

In this way the *chamars* within the selected area will be taught in a really practical manner to cure better.

When the agency has proved a success in this area it should be made over to a private individual or firm, and another agency started in another district

For a start I propose an agency over the Madhubani Zamindari in the north of the Darbhanga District.—This is an area in which the hides are cured very badly and up to the present has not been worked by the Calcutta firm. Similar suitable areas would be found afterwards in Chota Nagpur and Sambalpur.

Details of the proposed agency on the Madhubani Zamindari.—Mr. Hines, the manager of the estate, has estimated that we would collect about 10,000 hides per annum on the Madhubani Zamindari. We should require a European agent in charge of the collecting agency. He would need to be well acquainted with mufassal life and accustomed to dealing with natives of the lower classes. Under him would be 4 or 5 Muhammadan buyers, each located at a small godown. These small godowns would be distributed over the estate. These Muhammadans would buy hides, their operations being controlled by the agent. The hides would from time to time be transferred to a head godown, sorted, made into bundles and sent to Calcutta for sale.

I have gone as carefully as possible into the details of cost of up-keep of such an agency, expenditure and receipts, and I am of opinion that after the agent has gained his experience, the agency as suggested would pay its way.

Discussion of the proposal made.

(Ia) At my interviews with the various Calcutta firms, it was generally admitted that an Association of Calcutta hide-buyers would meet the situation. Further. each firm expressed its willingness to join the Association, but doubted very much if the other firms would join.

(Ib) I have not been able to find a list of the chief Tanners' Associations of Europe and America. Probably such an address would go through the Department of Commerce and Industry of Government of India and the Revenue and Statistics Department of the India Office, and these departments would be able to make a list of the Tanners' Associations it would be desirable to address. I hear that a German and Austrian Association of Tanners has recently been formed for the express purpose of representing the dissatisfaction of the German and Austrian tanners at the character and assortment of hides imported into Hamburg, especially Calcutta hides. This would be a very suitable Association to address. Probably also a copy of the address should be furnished to the various Commercial departments of Governments (such as the Imperial Royal Austrian Commercial Museum, Vienna), to the various Leather Trade Journals, and to the various Leather Trade Schools.

I seems to me that there is sufficient evidence to show that the trade is at present in an artificial and unsatisfactory condition, and that in the interests of Indian trade, Government would be justified in taking steps to alter this condition. I should not propose that the present collecting and distributing agency should be done away with, but that collecting agents and tanners should amalgamate to such an extent that their interests would be in a measure common.

(IIa) and (IIb). I think it is sufficiently obvious that if Government is to do any thing in the way of instructing the 'butchers' and *chamars*, it must be prepared to buy and sell and handle a certain number of hides. No butcher or *chamar* would allow a Government instructor to interfere in the curing of hides which were the butcher's or *chamar's* own property. Nor would butchers or *chamars* attend any school, unless they were paid a full wage to do so. By the flaying department suggested in proposal (IIa) all the butchers who use the Tangra Slaughter-house, *i.e.*, all the Calcutta butchers, would see the way in which we were flaying and could be trusted to make sufficient enquiries to decide if it paid us to flay in this way. By curing with Madras sea-salt in the most approved manner and sending this cure to the home-market we should expect to show to the home tanners how much the quality of Indian hides can be improved by cure and to create a demand for this kind of cure. By the agency as proposed in (IIb) we should be able to supply the only argument which could possibly be of any avail in persuading the *chamar* to cure differently, *i.e.*, we should ourselves be able to offer to buy his hides at a better price if he would cure better. We should be able to pay him a better price, because by means of our agency we should be earning the profits of the merchant who collects and brings hides down to Calcutta. We could afford to make a smaller profit and offer a better price to the *chamars* until the condition of the Calcutta market had improved and better cure naturally fetched a higher price than poor cures in that market.

E. R. WATSON, M.A., F.C.S.,
Professor, Civil Engineering College, Sibpur.

Enquiry as to the desirability of developing the Tanning Industry in the Province of Bengal, and as to the possibility of Government assisting in the development by means of education or instruction.

The tanning industry of the various Indian provinces was the subject of the Industrial Monographs for the year 1904.

The Monograph for the Province of Bengal was written by Mr. Rowland N. L. Chandra, Deputy Magistrate. In this monograph the present state of the industry in the Province is described in considerable detail, and it will only be necessary here to give a very brief *résumé.*

We may say that tanning is carried on chiefly as a home-industry on a very small scale. The tanners who work in this way are uneducated men, and the tanning as carried out by them is a very rough process, and the leather produced is a very inferior article. This country leather is made up into shoes, harness, &c., to meet local requirements. The Census tables (1901) show that there are about 5,000 tanners and curriers in the Province, exclusive of the workers in the Calcutta tanneries (5,279 actual workers in the Divisions which form the present restricted Bengal). These tanners are distributed all over the Province, but the concentration is greatest in the Presidency and Burdwan Divisions. It is very difficult to form any correct estimate of the amount of country leather which is tanned by these men and used by the local shoe-makers and saddlers. Mr. Chatterton in his Monograph on tanning and working in leather in the Madras Presidency (page 18) attempts an estimate of the amount of leather used by the country leather-workers in that Province. He takes the number of leather-workers from the Census tables, and assumes that each worker will on the average earn at least three annas daily and work up leather of twice that value. If we make a similar estimate for Bengal, since the number of actual workers. shoe, boot and sandal makers, is returned in the Census tables (1901), for the Divisions which form the present restricted Bengal, as 56,933, we obtain—

Total value of leather used by country shoe-makers, &c., annually	77·92 lakhs rupees.
Total value of leather goods produced by country shoe-makers, etc., annually	116·89 " "

The value of this rough and inferior leather made by the country tanners is not much greater than the sum which the hides from which it is made would have fetched had they been exported from the country. If we reckon the leather as worth 10 per cent. more than the hides, we shall not underestimate the value of the leather. This gives us—

Value of hides used annually by country tanners for production of country leather	70 lakhs rupees (approximate).

We have already seen (Report on enquiry as to the possibility or desirability of improving the cure of hides and skins exported from Bengal) the number and value of the hides exported from the Province, and for the period 1901—06, we may say roughly as the average—

Value of hides exported annually from the Province ... 150 lakhs rupees.

Except in Calcutta and neighbourhood, tanning is entirely conducted as a home industry. In Calcutta, however, there are a few small tanneries where leather is manufactured in a systematic and methodical manner, and is consequently much superior to the rough leather tanned by the country tanner in his own home. There are not, however, more than five or six tanneries in Calcutta of any size, and the largest of these does not produce more than 2 lakhs rupees' worth of leather annually. The small dimensions of the industry may be judged from the Census figures :—

	Total workers and dependants (Bengal).
Tanneries and leather factories—owners, managers and superior staff	249
Ditto operatives and other subordinates ...	1,550

A drive round the Calcutta tanneries will also convince one of the insignificance of the industry. The principal tanneries, and the only ones worthy of consideration, are Messrs. J. Teil & Co., Messrs. Monteith & Co., the Calcutta Tannery Co., the Bengal Tannery Co., Sircar's Tannery and Chowson Chinaman's Tannery.

As an outside estimate we have—

Value of leather produced annually in Calcutta tanneries ... 5 lakhs rupees.

This leather is used by the Calcutta carriage-builders for carriage hoods and by Calcutta boot and shoe-makers for boots and shoes used by Indian gentlemen and to some extent by Europeans.

There is no leather manufactured in Bengal for export (Messrs. J. Teil & Co. export a very small quantity).

There is a certain amount of leather imported, and also a certain amount of leather goods (superior quality goods for Europeans and Indian gentlemen). The value of the import is not, however, large; probably not more than Rs. 8 lakhs per annum.

The statistical tables available, viz., "Roberts on Trade carried by rail and river in Bengal, 1901-02, 1902-03, 1903-04, and 1904-05 unfortunately do not enable us to form a very accurate estimate of the imports of leather goods, because 'boots and shoes' are not returned as 'wrought leather,' but are included under the heading of 'apparel.' The figures available are:—

Value of Imports into Bengal.

	1901-02.	1902-03.	1903-04.	1904-05.
	Rs.	Rs.	Rs.	Rs.
Leather, unwrought (from British Provinces and Native States of India).	14,264	27,851	23,654	15,297

Leather, wrought (from chief seaports) ...	2,58,535	1,82,255	1,55,908	1,04,348

We may get a very rough idea of the value of the boots and shoes imported into Bengal from the figures for the value of boots and shoes imported into India *vid* Bengal ports:—

"Annual Statements of the Trade and Navigation of British India."—Sea-borne Trade

Imports (share of Bengal).	1901-02.	1902 03.	1903-04.	1904-05.
	Rs.	Rs.	Rs.	Rs.
Boots and shoes	7,56,168	9,31,318	9,56,386	...

These goods were imported for Bengal, and in part for other provinces fed by Bengal seaports, and perhaps we may estimate roughly that one-half were taken by Bengal.

After giving this brief sketch of the present industry, we may now consider in what way or ways the industry may develop. For this purpose it is instructive to look at other Indian provinces in which the industry is already more developed than in Bengal.

I. In Madras not only are hides tanned for country use, but also practically all hides exported are partially tanned. (This used also to be the case with skins, but of recent years, owing to the development of chrome-tanning in America and Europe, the tanning of skins for export has fallen off to a very large extent.) But although many more hides are exported from Calcutta than from all the other Indian ports combined, yet none of these hides are tanned before export. An examination of the trade figures leaves little doubt that it pays to tan hides before export.

Madras hides dressed or tanned.

Year.	Quantity.	Value.	Value per cwt.
	Cwts.	Rs.	Rs.
1899-1900	114,135	67,55,776	59
1900-1901	219,659	1,23,99,197	56
1901-1902	120,448	66,93,613	56
1902-1903	97,040	54,54,662	56
1903-1904	93,922	54,80,759	59
1904-1905	112,416	74,18,239	66

Compare with :—

Total Exports from British India (raw hides).

Year.	Quantity.	Value.	Value per cwt.
	Cwts.	Rs.	Rs.
1899-1900	1,188,765	4,92,49,617	41
1900-1901	1,282,630	5,26,62,193	41
1901-1902	579,493	2,87,99,134	42
1902-1903	671,314	3,01,76,046	45
1903-1904	670,792	3,16,75,395	47
1904-1905	709,261	3,70,87,322	52 .

We may take it roughly that 1 cwt. of raw hide will produce 1 cwt. of tanned leather, for although the hide loses weight by the preliminary operations, which remove dirt, salt, flesh and hair, on the other hand it gains weight during the operation of tanning proper. We see, then, that 1 cwt. of tanned Madras hide has always fetched one-third as much again as 1 cwt. of raw Indian hide, which is a very fair increase of price to pay for tanning.

At first sight, then, it looks as though it would be desirable that the hides which are exported from Calcutta should be previously partially tanned as in Madras. The question arises:—"Why should there be this difference between Madras and Calcutta? Is it because more suitable tanning materials are available in Madras or because tanning materials are cheaper there?" It does not appear to be due to want of suitable tanning materials in Bengal. Here "babul" (*Acacia arabica*) and myrobolams are available. These materials are used also in Madras and in Cawnpore and yield leather of good quality. In Madras certainly another material is used largely, viz., "avaram" bark (*Cassia auriculata*) which is not available in Bengal, but this bark does not appear to give such a good leather as "babul," the leather turning red on exposure to light. Nor does it appear that the cost of tanning materials is less in Madras than in Calcutta. In Calcutta, I am told, the cost of "babul" bark is now Re. 1-4 per maund (or Rs. 35 per ton), whilst previously it was only annas 8 per maund. This bark contains on an average 16 per cent. of tannin. According to Mr. Chatterton (*op cit.* page 24), the average price of "avaram" bark in Madras is Rs. 67-8 per ton, and it contains on an average 12 per cent. tannin, so that "avaram" in Madras instead of being cheaper than "babul" in Calcutta is very considerably dearer. There is one point on which it is difficult to get definite information. It is certain that "babul" bark in the quantity at present required in Calcutta is available at Re. 1-4 per maund, but would a very much larger quantity be equally available? I have noticed whilst travelling in Bengal that "babul" grows freely over large areas, *e.g.*, travelling from Calcutta to Jessore by railway I estimated that on either side of the line as far as could be seen "babul" trees grew on an average 100 yards apart. Again, in the Darbhanga district the "babul" grows freely, so that I should say there would be plenty of "babul" available in Bengal to meet a very much larger consumption than the present one.

So far as availability and cost of tanning materials go, therefore, Calcutta appears as suitable as Madras for the tanning of hides for export, nor have I been able to find any adequate reason for the difference between Calcutta and Madras in this matter.

But although the trade figures show that it pays to tan hides for export in Madras, and there is no reason to suppose that it would not be equally profitable in Calcutta, yet this tanning of hides for export is not exactly an ideal industry to develop. As I have already mentioned, of late years this tanning industry in Madras has received a severe set-back from the development of the chromo-tanning in America and Europe. For this process skins are required in an untanned condition; up to the present chrome-tanning has been especially applied to skins for the manufacture of glace-kid boot "uppers" and some difficulty has been found in making satisfactory heavier leather from hides, *e.g.*, for boot soles and for belting, by the chrome process. But it is quite possible that in the near future these difficulties may be overcome, and then the demand for the tanned Madras hides may fall just as severely as has the demand for tanned Madras skins.

Again, the buying and selling in connection with the tanning in Madras are very speculative. The prices both for raw hides and for tanned hides fluctuate largely, and the prices for the tanned hides do not necessarily follow the prices for raw hides, so that either a tanner must have a very large capital to enable him to hold his tanned stock for a favourable market or he will be unable to keep his tannery open during a period of adverse prices. During my visit to Madras in July (1907) I found many tanneries closed and many working at very low pressure. This of course means irregular employment for the workmen, and undoubtedly it would be much preferable to develop an industry which will give steady employment to the operatives rather than such a one.

II. In Cawnpore there are several large tanneries conducted on European lines. The largest tannery is the "Government Harness and Saddlery Factory," which manufactures saddlery, harness and accoutrements for the Indian Army. The other large tanneries are

"The Government Boot and Army Equipment Factory" and the "North-West Tannery Co." The Government Boot and Army Equipment Factory is not a Government concern, but has a contract for the supply of boots to the Army. This contract, I was told, forms about one quarter of their work, and besides this they manufacture all kinds of leather goods for Native Armies and States and better quality boots, etc., for Europeans. The North-West Tannery Company manufacture largely cheaper boots and shoes for natives and also a large number of bags, portmanteaus, dressing cases, etc. Another large tannery, the Wense Tannery, has now been closed down, as it did not pay. The Government Boot and Army Equipment Factory employs about 2,000 hands and the North-West Tannery about 1,000. The quantity of leather tanned per annum is roughly as follows:—

		lbs.
Government Harness and Saddlery Factory	... ...	1,500,000
Government Boot and Army Equipment Factory	...	750,000
North-West Tannery	...	500,000
* Other factories	...	250,000
Total	...	3,000,000
Estimated value (rupees)	...	2,000,000

The North-West Tannery Company estimate the value of their finished goods at Rs. 10 lakhs per annum, and on the same basis we have—

		Value of goods produced per annum. Lakhs rupees.
Government Harness and Saddlery Factory	... ...	30
" Boot and Army Equipment	... ...	15
North-West Tannery	... ...	10
Other factories	... ...	5
Total	...	60

		Lakhs rupees.
Value of goods taken by Army ...	... ...	33·75
Ditto ditto private consumers	... ...	26 25

These figures are sufficient to show that the tanning and leather manufacturing in Cawnpore forms a very fine industry employing 6,000—7,000 men.

The question at once arises:—"Is there any reason why the tanning and leather working industry should not develop to an equal extent in Calcutta or elsewhere in Bengal?" and along with it the further question, "How is it that this industry has developed to such fine proportions in Cawnpore and scarcely at all in Bengal?" It does not appear that tanning materials are any cheaper in Cawnpore than in Calcutta: labour is a little cheaper, but Cawnpore is not without its labour difficulties. The Government Factory, it will be noticed, produces about as much leather as the other factories together, and the Army takes more than one-half of all the leather goods manufactured in Cawnpore. The industry is, therefore, largely dependent on the Army at the present time, and in my opinion the tanning and leather-working industry has developed to such proportions in Cawnpore simply as a consequence of the Government starting their harness and saddlery factory in this place. As a matter of history, the Government Factory was started here just after the Mutiny, viz., in 1859, and the next largest factory, viz., Messrs. Cooper Allen's (the Government Boot and Army Equipment Factory) was started with a Government subsidy. Further, I understand that the only other large tannery in India which produces finished leather is Adamjee Peerbhoy's in Bombay, and this tannery owes its growth to Government encouragement and is largely dependent on Government contracts. (The Perambore Harness and Saddlery Factory, Madras, does not tan leather, but is entirely supplied by Messrs. Adamjee Pearbhoy's) In short, the development of the tanning industry on factory lines in India has been due very largely to Army requirements and Government encouragement, and, in my opinion, if part of the Government tanning and leather work could be transferred to Calcutta, this Government factory would in all probability form a nucleus around which the tanning and leather-working industry would develop to proportions quite equal to those of the Cawnpore industry. Unfortunately there appears to be little prospect of Government starting such a factory in Calcutta. The only Government tanning and leather working factories are the Government Harness and Saddlery Factory at Cawnpore and the Perambore Harness and Saddlery Factory, and quite recently (July 1907) the Director-General of Ordnance in India has announced his wish to concentrate each branch of work as much as possible and, so far as leather work is concerned, to close Perambore and concentrate all the work at Cawnpore. I understand that as this concentration will be opposed to many interests, it is strongly objected to on behalf of these interests, and it is quite possible that the leather work may not be further concentrated than at present; but that there will be a further decentralisation against the expressed wishes of the Director-General of Ordnance must be considered as very unlikely.

We have already noticed that more than half of the products of the Cawnpore factories go to meet Army requirements. Our estimate of the value of goods taken by private consumers was 26·25 lakhs. These goods are sold largely in other Provinces than the United Provinces. I made enquiries in Cawnpore as to whether there was any reason to suppose that there would be a limit to the demand for goods of the quality turned out by such factories. I pointed out that at the present time the total imports of leather and leather goods (including boots and shoes) into India were, say, worth Rs. 50 lakhs per annum and suggested that after the industry had grown to produce another Rs. 50 lakhs worth of goods that there would be little further room for development. This, however, is not an admissible view of the situation. We have already seen that, in Bengal alone, at least 117 lakhs rupees worth of rough country-made leather goods are consumed annually. Now the taste for boots and shoes of European styles, such as are produced at the Cawnpore factories, is growing rapidly, and men who previously wore country-made country-style shoes are now taking to the use of European-style goods. So that the correct view of the matter seems to be that the demand for factory-made leather goods may be developed in India to an almost unlimited extent.

From our comparison of the tanning industry of Bengal with that of Madras and of Cawnpore, the conclusion at which we have arrived is that it would be quite a good thing if large tanneries and leather-working factories, similar to the Cawnpore factories, could be started in Calcutta or elsewhere in the Province.

There is at present quite sufficient demand for the class of goods which would be manufactured to justify the starting of several large factories, and the demand can undoubtedly be developed to an almost unlimited extent. There are no technical objections to the starting of tanning in Calcutta. The same tanning materials are available here as in Cawnpore (babul bark and myrobolams are used in Cawnpore). These are available at the same rates in Calcutta. In addition, mangrove bark is available in quantity in the Sundarbans. (Owing to a large demand nowadays for tanning materials of all kinds, strenuous efforts are being made by scientists to prepare tanning liquors from mangrove which will give a high-class leather, and probably in the near future this material will be available even for high-class work.) Labour may be a little dearer, but very good wages have to be paid now in Cawnpore. A good supply of water is available from the Hooghly above Calcutta, say at Serampore, Titaghar or Hooghly, and the water is of good quality. And the development of factories of this kind is good for the working classes, especially if the factories are taken some little distance from the city, so that the workers are housed in sanitary dwellings by the factory management. Steady employment and good wages are ensured for a large number of workers.

This is *the* development of the tanning industry which can be thoroughly recommended. The objection to the Madras industry of partial tanning for export has already been noted. Again, the idea of improving tanning as a home-industry for the villages cannot be entertained, as the process of tanning can never be satisfactorily carried out on a very small scale. Success in tanning depends essentially on securing uniformity of conditions, uniformity in the strength of the liquors, etc., and a worker on a very small scale cannot afford the system of control necessary for this.

We have already noted that it is very unlikely that Government can directly start this factory tanning and leather-working industry in Bengal, and consequently the only thing that remains is to try to attract private capital for the purpose.

Government could probably help, to some extent, in its initial stages, any really sound concern which might be started, by giving it a fair chance to tender for the supply of leather goods required by Government, if not for the Army, perhaps for the Police or for the various other departments of the Local Government, requiring a certain amount of leather goods.

We now come to the problem which more directly concerns us as to whether this development could be helped by means of education or instruction.

Here, again, we can profitably examine what is being done elsewhere in India.

1. In Cawnpore nothing is being done by means of education or instruction for the leather trade. The management of the tanneries factories is in European hands, and the superintending staff have either received their training in Europe or picked it up in the factory. These factories do not feel the need of any more theoretical education for their superintending staff, nor do they ask for any further education for their workers, except a little more general education, which they ask should be any thing rather than literary.

2. In Madras Mr. Chatterton, the Director of Technical and Industrial Enquiries in the Presidency, has established a small tanning and leather-working factory on purely business lines in which all the tanning is done by the chrome process. Mr. Chatterton is a firm believer in the superiority of chrome-leather over vegetable-tanned leather for many purposes; especially he believes chrome-leather to be very suitable for the manufacture of water-well buckets. A very large number of leather water-buckets are used in the Madras Presidency, and his object in starting this chrome-tannery has been to introduce chrome-leather for the manufacture of water-buckets. Incidentally he is willing to allow anyone who is desirous of learning chrome-tanning to work in the tannery and see all the process.

In Bengal the leather water-bucket is not used, so that the *motif* which started the chrome-tannery in Madras is absent in Bengal: nevertheless it is quite an open question whether chrome-leather is not as good or better than vegetable-tanned leather for boots and

shoes in this country. The process of chrome-tanning has several great advantages over vegetable tanning, the chief of which is that it is quick, and in consequence a much smaller capital is required than in the vegetable process for a given outturn Such an industry which can be worked satisfactorily with a small capital is undoubtedly the kind of industry which is most suited for those members of the Indian community in Bengal who are anxious for *Swad shi* industrial development. It appears that at present the wealthy members of the Indian community are not prepared to put their money into any large *Swadeshi* industrial concern, and the only course which remains for the educated classes who are really anxious to take up industrial careers but yet have only small funds at their disposal, is to take up industries which can be successfully run with a moderate amount of capital. Now it is these men who have at any rate effected this much, that at the present day an interest in industrial development has been aroused in the country, and the Government should, I think, in considering the question of technical education, take especially into consideration the requirements of this class, and, as I have said, chrome-tanning is an industry which offers special advantages for such men, and the Government should bring this industry prominently to their notice and offer such as may wish it the chance of learning the details of the processes involved.

Several well-educated Indian students have availed themselves of the opportunity to learn the chrome-tanning process in Madras, and one or two of them have subsequently tried to start small chrome tanneries. But up to the present no appreciable chrome-tanning industry has sprung up.

Owing to the existence of the large Government Harness and Saddlery Factory at Cawnpore and Mr Chatterton's Chrome Tannery at Madras, the Government of Bengal can already offer a very complete education in tanning and leather-working to any generally-educated student who wishes to learn this industry. The Superintendent of the Government Harness and Saddlery Factory at Cawnpore is perfectly willing to take such men and put them through a five years' course of training in the factory, in which time they would learn every process in the factory. The men would, of course, be required to work their way through the factory. And in Madras the chrome-tanning is, so to speak, on view for any one who wishes to learn all about it.

We must consider the question:—"How many students would avail themselves of the instruction if a tanning and leather-working school were started in Bengal?" There is at present no employment available in the Province for men trained in such a school, and, as I have already said, the Cawnpore factories even do not feel the need of such training for their superintending staff. The only students who would avail themselves of such instruction would be those with no definite idea as to what they would do afterwards and those who had the idea of starting a tannery for themselves or of securing the management of some tannery which was proposed to be started. I have consulted "the Association for the Advancement of Scientific and Industrial Education of Indians," Dr. N. Sircar, Secretary of the "Bengal Technical Institute," and Dr. A. L Sircar, Secretary of the Indian Association for the Cultivation of Science," in order to learn the opinion of the Indian community, and especially of that section interested in industrial development, as to the demand which might be expected for training in the processes of the tanning industry. Dr. N. Sircar has himself been attracted to chrome tanning, as he considers that this is a process which will pay even on a small scale and that there is a ready demand for the leather, and in connection with the Bengal Technical Institute he has started a small chrome tannery with a capital of about Rs 7,000, but up to the present no student has wished to learn the process. The general opinion was that the number of students would not be large, partly owing to caste prejudices.

The conclusion arrived at as the result of my enquiries can therefore be stated as follows:—

I.—There is plenty of scope for a large tannery and leather-work factory, after the style of the Cawnpore tanneries, to be started near Calcutta or elsewhere in Bengal, and by such factories the tanning industry would be developed in the most satisfactory manner.

II.—The chrome-tanning industry is particularly suited to the requirements of that section of the Indian community now especially interested in industrial development. This could be taken up in fairly small factories and its development in Bengal could be viewed with satisfaction.

My *recommendations* for bringing about these developments are:—

I.—That the Government of Bengal should address the Government of India, and point out the advantages to the general trade of the Province which would result from the starting of a branch Army Supply Harness and Saddlery Factory in Bengal, and urge strongly the starting of such a branch factory.

II.—That the views of the Government as to the desirability of establishing tanneries in Bengal should be made known to the public, and especially to those who are likely to find capital for industrial schemes. This could be done by publishing pamphlets and by lectures and authorised and signed leaders or articles in the principal newspapers and trade publications.

The Local Government should also make known to the public its willingness to help, during its initial stages, any concern which might be started on really sound lines by giving it a fair chance to tender for the supply of leather goods required by the various departments of the Local Government.

III.—*With regard to educational measures*, I cannot recommend the starting of any classes or school in Bengal for teaching tanning, but I recommend that scholarships be given to any students with satisfactory credentials to allow them to proceed to Cawnpore to learn tanning and leather-working at the Government Harness and Saddlery Factory or to Madras to learn chrome-tanning under Mr. Chatterton, and that the willingness of Government to give these scholarships should be announced as publicly as possible, together with a clear statement as to the completness of the training available at Cawnpore and Madras.

The course of training at Cawnpore would last five years. Towards the end of this period the students would probably be earning a living wage. The scholarships awarded should be just sufficient to pay for the students' board and lodging in Cawnpore (say Rs. 50 per mensem) until such time as the Superintendent of the Factory found himself able to give the men a living wage.

The course of a training at Madras need not extend for more than one year if the student had a previous scientific education. Mr. Chatterton could decide the period it would be advisable for any particular student to work under him. In this case also the scholarship awarded should be just sufficient to pay for board and lodging (say Rs. 50 per mensem).

E. R. WATSON, M.A., F.C.S.,
Professor, Civil Engineering College, Sibpur.

REPORT ON THE ADMINISTRATION OF THE INCOME-TAX IN BENGAL DURING THE THREE YEARS ENDING THE 31ST MARCH 1908.

NOTIFICATION.

No. 638S.R.—The 20th August 1908.—The following extracts from the Report of the Board of Revenue on the administration of the Income-tax in Bengal during the three years ending 31st March 1908 are published for general information.

C. E. A. W. OLDHAM,
Secretary to the Govt. of Bengal.

No. 4249B., dated Calcutta, the 11th August 1908.

From—PANDIT RAMA BALLABH MISRA, M.A., Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in Charge:
THE HON'BLE MR. E. W. COLLIN, I.C.S.

I AM directed to submit the following Report on the administration of Income-tax in the Lower Provinces during the trionnium ending on the 31st March 1908. * *

* * * * * * *

(i) *Miscellaneous orders and rulings of importance.*— * * The Government of India directed that in future all claims for the refund of income-tax paid under Parts I and III may be received and examined if preferred within six years from the date of realization of the tax.

(ii) It was laid down by the Government of India that income-tax should not be levied on the compassionate gratuities granted to the families of deserving Government servants left in indigent circumstances.

* * * * * * *

(vii) It was ruled by the High Court that an owner of mines (whether worked by himself or lessees) is liable to pay both income-tax and road cess on the same net profit derived, or royalty received, by him from the mines. (Indian Law Reports, April 1, Volume XXXIV, Part IV, pages 257-288).

* * * * * *

Revenue derived from Income-tax during the triennium.—The receipts, charges and net revenue derived from the collection of Income-tax during each of the three years 1905-06, 1906-07, and 1907-08 were as follows:—

YEAR.	Receipts.	Charges.	Percentage of charges.	Net revenue.
	Rs.	Rs.		Rs.
1907-08 ...	51,98,644	1,67,478	3·2	50,31,166
1906-07 ...	48,64,256	1,63,011	3·4	47,01,245
1905-06 ...	46,48,526	1,51,862	3·3	44,96,664

The increase in the net revenue during 1907-08 was 7 per cent., as compared with 1906-07, and 11·9 per cent., as compared with 1905-06. The average net receipts of the triennium show a decrease of Rs. 3,53,624 or 6·9 per cent., as compared with the figures of the preceding triennium. The decrease is partly due to the partition of Bengal and partly to the enactment of Act XI of 1903.

Demand on account of incometax.—The final number of assessees and the final demand for the year 1907-08 showed an increase of 2,017 persons and Rs. 3,49,223, or 4·6 and 7·9 per cent., respectively, as compared with the figures of 1906-07; and an increase of 3,517 persons and of Rs. 5,40,412, or 8·4 and 12·9 per cent., respectively, as compared with the figures of 1905-06.

There was a reduction of the demand of about 5½ lakhs in the Province owing to the partition. The demand in the districts outside Calcutta was Rs. 13,82,342 in 1905-06 against Rs. 19,42,186 in 1904-05. During the succeeding two years, the demand of the districts increased by about 2 lakhs, while the demand in Calcutta has increased by 6½ lakhs since 1904-05. The final demand of the Province at the close of the triennium stood at Rs. 47,45,507 against Rs. 44,62,577 at the close of 1904-05.

The increase is due to more careful inquiry and assessment, to the rapid growth of trade and increased commercial prosperity, especially in the city of Calcutta, to the opening of new coal mines in Burdwan, and to the flourishing state of the coal and mica industries and of the trade in lac in the Chota Nagpur Division.

* * * * * *

Nnmber of assessees and the amount of tax collected under Part IV, in the grade of Rs 1,000-1,250 during the triennium.—The Government of India in their letter No. 7678S.R., dated the 8th December 1904 noticed the relatively large number of assessees in the lowest grade of the amended Act. namely, Rs. 1,000—1,250 in 1903-04, the year following the passing of Act XI of 1903. The matter was therefore made the subject of an enquiry by the Board; and in accordance with the directions given by the Government of Bengal in its letter No. 517S.R., dated the 8th November 1905, they prescribed the submission of certain statements by District Officers in order to check the tendency of the assessing staff to bring into the lowest grade assessees who were entitled to exemption under the change of law. The figures furnished by the District Officers on the subject for the last three years are summarized below:—

Year.			Number of assessees under Part IV in the grade of Rs 1,000—1,250.	Amount of tax collected under Part IV in the grade of Rs 1,000—1,250.
				Rs.
1907-1908	...	...	10,647	2,12,109
1906-1907	...	...	10,571	2,11,392
1905-1906	...	...	10,602	2,12,279

The number of persons assessed in 1907-08 shows an increase of 76 and 45 persons or ·7 and ·4 per cent., respectively, as compared with the figures of the preceding two years; and the amount of tax collected shows an increase of Rs. 717 or ·3 per cent., as compared with 1906-07, and a decrease of Rs. 170 or ·08 per cent., as compared with 1905-06.

Of the total number of assessees in the lowest class of Part IV (that is, those assessed on the lowest taxable income) in 1907-08, 482 were formerly in higher classes, 1,685 were new assessees and 2,668 were assessees who in previous years had been assessed in lower classes, as against 526, 1,464, and 2,631, respectively, in 1906-07, and 552, 1,455 and 2,809, respectively, in 1905-06. The assessments cancelled on objection or appeal in the cases of new assessees in the lowest class were 247 or 5·7 per cent., against 224 and 293 or 5 and 6·9 per cent., respectively, in the preceding two years.

This subject was dealt with in paragraph 8 of the last triennial report, when the increase in this class of assessees in 1903-04 was explained. Since that year, the assessments in the lowest class have followed the ordinary fluctuations of the year and the figures do not indicate a tendency on the part of the assessing staff to bring under assessment, without adequate investigation, those who were exempted on the raising of the taxable minimum in 1903.

Incidence of the demand on population.—The following statement shows the proportion of persons assessed to the population and the villages in the province and the incidence of the tax during the triennium under report :—

Year.	Proportion of persons assessed to population.		Proportion of persons assessed to villages.		Number of persons in proportion to each rupee of tax assessed.
	Persons.	Population.	Persons.	Villages.	
1907-1908 ...	1	1,113	33	100	11
1906-1907 ...	1	1,164	32	100	12
1905-1906 ...	1	1,206	30	100	12

The variations are due to the increase in the number of persons finally assessed and in the final demand, as explained in paragraph 8 of the Report.

Rural and urban incidence of the tax.—The proportion of the tax paid in Calcutta in comparison with that paid in the rest of the province is exhibited below :—

Year.	Amount of tax realized in—		
	Calcutta.	Rest of province.	Total.
	Rs.	Rs.	Rs.
1907-08 ...	30,59,617	15,35,269	45,94,886
1906-07 ..	28,61,229	14,11,458	42,72,687
1905-06 ...	27,11,460	13,70,492	40,81,952

The number of assessees in each year has already been compared in paragraph 8 above. It will be seen that, during the last year under consideration, Calcutta contributed 42·2 per cent. of the persons assessed and 66·6 per cent. of the tax realised. The feature of the triennium is the increase of taxation realised in Calcutta, which amounts to over 6 lakhs of rupees. The proportion of the tax contributed by Calcutta has risen from 55·8 per cent. to 66·6 per cent.

As regards the assessments under Parts II and IV of the Act only, the seven cities—Calcutta, Patna, Gaya, Darbhanga, Monghyr, Bhagalpur, Cuttack—with a population of over 50,000 inhabitants in each contained between them 23·6 of the assessees in the province and contributed 55·07 per cent. of the tax collected.

The incidence of the tax in rural areas during the year 1907-08 varied from Re. 1 to every 106 persons in Sambalpur to Re. 1 to every four persons in Darjeeling.

Incidence of the tax according to incomes.—The incidence of the tax according to the different rates of incomes is shown in the following table:—

Class.	Rate of income.	Percentage of assessees of each class.	Percentage of collections contributed by each class.
	Rs. Rs.		
I ...	1,000 but less than 1,250 ...	33·5	6·1
II ...	1,250 ditto 1,500 ...	12·1	3·3
III ..	1,500 ditto 1,750 ...	8·9	3·0
IV ...	1,750 ditto 2,000 ...	7·6	3·2
V to XIII ...	2,000 and over	37·9	84·4

The proportion of the number of assessees with incomes of less than Rs. 2,000 a year was 62·1 per cent. and that of the amount paid by them 15·6 per cent. The percentages are lower than in the last triennium, and this is possibly an indication of the increased prosperity of the mercantile community.

* * * * * *

Objections to the assessments.—The percentages of objections to assessments for the whole Province were 12·4 in 1907-08, 12 in 1906-07, and 12·06 in 1905-06.

* * * * * *

Exemptions and result of revision.—The figures on the margin compare the number of persons exempted on revision and the amount of tax remitted by District Officers, Commissioners and the Board, during the triennium under report. The percentage of exemptions on the number of persons originally assessed was 1·4 in 1907-08, 1·4 in 1906-07 and 1·6 in 1905-06; that of remissions on the original demand 1·3, 1·7, and 1·6, respectively.

Year.	No. of persons exempted.	Amount of tax remitted.
		Rs.
1907-08 ...	628	64,070
1906-07 ...	596	74,887
1905-06 ...	693	70,071

Collections of Income-tax.—The following statement compares the amount of the tax collected under each part of the Act during the last three years:—

Year.	Part I—Salaries, pensions, annuities and gratuities.	Part II—Profits of Companies.	Part III—Interest on securities.	Part IV—Other sources.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
1907-08 ...	7,43,267	9,26,193	1,10,407	28,15,019	45,94,886
1906-07 ...	6,97,768	7,86,208	1,02,565	26,86,146	42,72,687
1905-06 ...	6,55,139	7,30,878	98,496	25,97,439	40,81,952

The total collections on account of tax under all parts during the year 1907-08 showed an increase of Rs. 3,22,199 or 7·5 per cent. over those of 1906-07 and Rs. 5,12,934 or 12·6 per cent. over those of 1905-06. The increase in the total collections during 1907-08, as compared with those of the preceding year, was obtained from all the main classes of assessees; Salaries (Part I) contributing Rs. 45,499, Companies (Part II) Rs. 1,39,985, Securities

(Part III) Rs. 7,842, and other sources (Part IV) Rs. 1,28,873, or 14 1, 43·5, 2·4 and 40 per cent. of the total increase, respectively. Of the total increase in 1907-08 as compared with the figures of 1906-07, Calcutta contributed Rs. 1,98,388 or 61·6 per cent., a result which is chiefly attributed to the greater prosperity of the jute, coal and banking businesses, to the formation of new companies, to increase of establishment on the railways and in mercantile offices and to larger issues of debentures.

The gross collections during the year 1907-08, including arrears of tax, penalties, etc., amounted to Rs. 47,61,152, as compared with Rs. 44,34,001 in 1906-07 and Rs. 42,39,121 in 1905-06.

The percentage of tax collected under each part on the total amount of tax collected during the year 1907-08 was as follows:—

Part I—Salaries	16·2
„ II—Profits of companies	20·1
„ III—Interest on securities	2·4
„ IV—Other sources	61·3

The percentage of collections on the final demand on account of tax alone during 1907-08 was 96·8, as compared with 97·2 and 97·07 in the two previous years, respectively.

The percentage of collections on the final demand on account of tax, penalties etc., both current and arrear, excluding advance payments and excess collections, was 95·3, as compared with 95·7 in 1906-07 and 95·9 in 1905-06. The districts of Bankura, Midnapore, Hooghly, Howrah, Murshidabad, Gaya, Cuttack and Palamau succeeded in collecting the entire demand on account of tax within the year. The prescribed standard was reached in all the other districts, except Bhagalpur, where the percentage fell from 99·2 in 1906-07 to 89·8 in 1907-08. The short percentage in this district was due to the fact that a large number of objections, which were filed by some higher class assessees about the close of the year, could not be disposed of within the year.

Outstanding balances of Income-tax.—The outstanding balance on account of tax, penalties and costs for the year 1907-08, as compared with the two previous years, is shown below:—

Year.	Balance on account of—			
	Tax.	Penalties.	Costs.	Total.
	Rs.	Rs.	Rs.	Rs.
1907-08 ...	1,71,926	12,154	3,569	1,87,649
1906-07 ...	1,44,705	10,579	3,485	1,58,769
1905-06 ...	1,39,926	8,809	2,595	1,51,330

The sum of Rs. 1,87,649 against the year 1907-08 includes Rs. 25,672 for the year 1906-07. Calcutta alone returns a balance amounting to Rs. 1,52,283, as compared with Rs. 1,35,832 in 1906-07 and Rs. 1,33,420 in 1905-06. The increase is due to the increase in demand. Of the total balance of Rs. 1,87,649, Rs. 1,11,121 are reported to be under realization, Rs. 45,795 are doubtful and Rs. 30,733 are probably irrecoverable.

Coercive measures.—The following statement compares the demand, collection and balance on account of penalties, fines and costs for the last three years:—

Year.	Demand.		Collection.		Balance.	
	Penalties and fines.	Costs.	Penalties and fines.	Costs.	Penalties and fines.	Costs.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1907-08 ...	17,038	8,535	8,150	6,067	8,888	2,468
1906-07 ...	15,170	8,662	7,908	6,042	7,262	2,620
1905-06 ...	14,069	7,565	7,957	5,971	6,112	1,594

* * * * * * *

Concluding remarks.—The main feature of the period under report is the Partition of Bengal, in consequence of which the final number of assessees and the final demand in the first year of the triennium dropped from 52,493 and Rs. 44,62,577 to 41,955 and Rs. 42,05,095 or by 20·08 and 5·8 per cent., respectively. At the close of the triennium, however, the final number of assessees and the final demand came up to 45,472 persons and Rs. 47,45,507 against 52,493 persons and Rs. 44,62,577, respectively in 1904-05, the year just preceding the Partition. The decrease in the final number of assessees has been made up by 33·4 per cent., but the final demand has exceeded by 6·3 per cent. Another feature is the increase of the tax realised in Calcutta owing to the increase of business in the last three years, and the Collector deserves credit for his successful administration of the Department. Like all other direct taxation the tax continues to be unpopular, although the relief given by the raising of the maximum limit of the taxable income is appreciated. There is, however, no open indication of discontent, and the administration of the Act was carried on smoothly. The thanks of the Board are due to Commissioners and to District Officers generally for their satisfactory management of the Department.

REPORT ON THE ADMINISTRATION OF THE STAMP DEPARTMENT IN BENGAL DURING THE THREE YEARS ENDING THE 31ST MARCH 1908.

NOTIFICATION.

No. 656S.R.—The 22nd August 1908.—The following extracts from the Report from the Board of Revenue, L. P., on the administration of the Stamp Department for the triennium ending the 31st March 1908 are published for general information.

C. E. A. W. OLDHAM,
Secretary to the Govt. of Bengal.

No. 4340B., dated Calcutta, the 15th August 1908.

From—PANDIT RAMA BALLABH MISRA, M.A., Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in charge:
THE HON'BLE MR. E. W. COLLIN, I.C.S.

I AM directed to submit, for the information of Government, the following report on the administration of the Stamp Department during the three years ending the 31st March 1908. * *

* * * * * *

FINANCIAL RESULTS.

The main feature of the period under report is the partition of Bengal, in consequence of which it is not possible to compare the fluctuations of the past three years with the preceding triennial periods. The receipts, which in 1904-05 were Rs. 2,08,65,770, fell to Rs. 1,43,62,962 in 1905-06. During the last year of the triennium the receipts rose to Rs. 1,51,17,649. The statistics for the districts transferred to the Province of Eastern Bengal and Assam have been excluded, while those for the district of Sambalpur, which has been added to Bengal, have been incorporated in the report.

* * * * The revenue collected under both the Stamp and Court-fees Acts during the year 1907-08 amounted to Rs. 1,51,17,649 and exceeded the receipts of any other year during the triennium, being Rs. 4,10,967 more than in 1906-07 and Rs. 7,54,687 more than in 1905-06. The increase of revenue, which amounts to 2·8 per cent. and 5·2 per cent. in the two years, occurred under both judicial and non-judicial stamps. While the receipts under the former head received a set-back in 1906-07, from which, however, they recovered completely in 1907-08, the receipts from the sale of non-judicial stamps increased steadily throughout the triennium. There has been a corresponding steady increase in the total charges during the past three years, although the general result shows an increase in the annual net income. The total charges during 1907-08 amounted to Rs. 3,69,340, giving an increase of 2·3 and 3·5 per cent. over the figures of 1906-07 and 1905-06, respectively. The increased expenditure was due to the larger amount of discount paid to vendors on the increased sales of stamps.

* * * * * *

A.—JUDICIAL STAMPS.

The sale-proceeds of Court-fee stamps (excluding stamps for copies) fell from Rs. 96,13,749 in 1905-06 to Rs. 94,66,666 in 1906-07. In the subsequent year (1907-08), however, they exceeded by Rs. 4,06,887, or 4·3 per cent., the receipts of 1906-07. The increase is mainly attributed to larger resort to Civil Courts, to the payment of a larger amount of duty in probate and letters of administration cases in Calcutta and to the gradual development of survey-settlement operations. The enquiries held by revenue officers under section 19-H (3) of the Court-fees Act, VII of 1870, as amended by Act XI of 1899, have led to more careful valuations by applicants for the grant of probates and letters of administration. There was an increase in the receipts from the sale of stamps for copies and a slight decrease in the sale of plain paper.

The total receipts under the former head amounted to Rs. 5,65,756 against Rs. 5,54,846 in 1906-07 and Rs. 5,27,721 in 1905-06. Under the latter head the total receipts amounted to Rs. 1,93,282 and show a decrease of Rs. 499 as compared with the receipts of 1906-07, and an increase of Rs. 8,826 as compared with the receipts of 1905-06. The increase under the head of miscellaneous receipts, as compared with the years 1906-07 and 1905-06, was due to the fact that Court-fee stamps worth Rs. 8,000 were required for a probate in the district of Purnea. There being, however, only one stamp for Rs. 1,000 in stock, the balance of Rs. 7,000 was credited under the head "miscellaneous receipts," and a certificate was given on the back of the stamp accordingly.

B.—NON-JUDICIAL STAMPS.

Non-judicial stamps show an increase of Rs. 3,39,074 or 8·5 per cent when compared with 1906-07. The increase was shared by all classes of stamps.

Impressed Stamps.—The revenue derived from the sale of impressed stamps (the most important item among non-judicial stamps) showed a progressive increase during the past three years. The receipts during 1907-08 were Rs. 24,82,943, which exceeded those of 1906-07 and 1905-06 by Rs. 1,60,601 and Rs. 3,99,845, respectively. The largest increase occurred in Calcutta and is attributed to the growth of trade. In other districts the increase is generally ascribed to the increase in the number of deeds executed owing to the failure of harvests and higher price of food-grains.

Hundis or inland bills-of-exchange.—The revenue derived from the sale of *hundi* or bill-of-exchange stamps rose steadily during the past three years. The receipts during 1907-08 were Rs. 1,62,419 and show an increase of Rs. 12,860 as compared with those of 1906-07 and of Rs. 27,997 over those of 1905-06. The largest increase occurred in Calcutta and is attributed to the development of the natural resources of the country and the growth of its inland trade.

Impressed labels or special adhesive stamps.—Receipts from the sale of impressed labels which are used only in Calcutta showed a progressive increase during the past three years. The receipts during 1907-08 were Rs. 11,17,810, which exceeded those of 1906-07 and 1905-06 by Rs. 79,269 and Rs. 1,51,158, or by 7·6 per cent. and 15·6 per cent., respectively. The increase is attributed to the growth of trade and the increasing popularity of this class of stamps in Calcutta.

One-anna receipt stamps.—The sale of this stamp was stopped with effect from 1st October 1905. * * * * The revenue derived from the sale of the stamps during the first-half of 1905-06 amounted to Rs. 2,23,529.

Foreign Bill Stamps.—These stamps are sold chiefly in Calcutta for bills-of exchange, cheques and promissory notes drawn or made out of British India and chargeable with a duty of more than one anna. The receipts from this source during the past year amounted to Rs. 90,178, which, compared with the receipts of 1906-07 and 1905-06, show an increase of Rs. 4,268 and Rs. 7,699, respectively.

Share-transfer Stamps.—Sales of these stamps, which are used for the payment of stamp duty on transfers of the shares of public companies and associations, are practically confined to Calcuttta. The revenue during 1907-08 amounted to Rs. 1,87,363, which, compared with Rs. 1,27,528 and Rs. 68,731, the receipts of the years 1906-07 and 1905-06, shows an increase of Rs. 59,835 and Rs. 1,18,632, or 46·9 and 172·6 per cent., respectively.

The practice obtaining in the Calcutta share market of using adhesive stamps on separate instruments of share-transfers in payment of the original duty as well as in payment of excess duty was brought to the attention of the Board in the year 1905, and the Collector of Stamp Revenue, Calcutta, pointed out that the figures for a period of 10 years ending 31st March 1904 appeared to suggest that the revenue derived from the sale of adhesive share-transfer stamps bore no proportion to the increase in the number of Limited Companies and the consequent increase in the number of transactions relating to shares. Section 11 (*c*) of the Indian Stamp Act, 1899, permits the use of adhesive stamps for transfers of shares by endorsement, and it is clear from

rules 5, 13, and 15 of the Government of India's Rules, published with Notification No. 3632Exc., dated the 29th June 1906, that additional duty may be paid by affixing adhesive stamps when the original engraved or embossed stamp is insufficient; but the use of adhesive stamps in payment of duty on original deeds of transfer has not the authority of law. There was reason to believe that the stamp duty was being evaded. There was, however, a consensus of opinion that the law cannot be enforced or the present practice abolished without causing great practical inconvenience in the Calcutta Share Market, and the Board, on a careful consideration of all the facts, recommended to Government that section 11 (*e*) of the Stamp Act should be amended so as to legalise the present practice of using adhesive stamps on separate instruments of share-transfers in payment of original duty. They considered that the risk of loss to the revenue by fraudulent second use of stamps must be faced and that it can only be checked by asking the mercantile community to co-operate in the enforcement of the provisions of section 12 of the Stamp Act and by offering substantial rewards for the detection of fraud. The Government of Bengal supported the recommendation of the Board; and the Government of India in their letter No. 7044Exc., dated the 23rd November 1907, to the address of the Government of Bengal, stated that the desirability of amending section 11 (*e*) in the manner proposed will be considered when the Stamp Act, 1899, next comes up for revision.

Since the discussion began three years ago there has been a considerable increase in the value of adhesive share-transfer stamps sold from the Calcutta Collectorate. The Collector attributes this increase to speculation in coal shares and to the floating of joint stock companies. Mr. Baboneau also thinks that the discussion of the question of the fraudulent use of adhesive stamps has been useful in the protection of the revenue.

Stamps for Legal Practitioners' licenses.—The amount of revenue realised from the sale of these stamps during 1907-08 was Rs. 97,649, which shows an increase of Rs. 2,112 and Rs. 1,958, respectively, over the receipts of the years 1906-07 and 1905-06. The increase is due to the increase in the number of legal practitioners.

Notarial Stamps.—These are one-rupee foreign bill stamps over-printed with the word "Notarial" under rule 15 (*d*) of the rules issued with the Notification of the Government of India No. 3632Exc., dated the 29th June 1906. They were sold in 10 out of 33 districts in 1907-08. The sales of the year amounted to Rs. 1,787 in comparison with Rs. 1,574 and Rs. 1,516 during the two previous years.

Forms for cheques or receipts.—Forms for cheques and receipts are impressed with one-anna stamps by the Controller of Printing, Stationery and Stamps in accordance with rule 7 of the rules issued with the Notification of the Government of India No. 3632Exc., dated the 29th June 1906, on receipt of a certificate of payment from a Government treasury. Hitherto the practice had almost exclusively been confined to European firms and Banking Corporations, but the Marwari and other Indian merchants and traders have gradually come to realise the utility of this procedure as a safeguard against abstraction in the case of *hundis*, receipts and bazar *chits*. Cheque forms of different kinds issued by the Accountant-General, Bengal, for the use of Incorporated Local Funds, are also impressed in the office of the Controller of Printing, Stationery and Stamps, with one-anna stamps and issued to all treasuries in Bengal. The receipt of the last year of the triennium from this source amounted to Rs. 1,46,996, which exceeded those of 1906-07 and 1905-06 by Rs. 19,916 and Rs. 21,819, or by 15·7 per cent. and 17·4 per cent., respectively. The largest increase occurred in Calcutta and is attributed to the deterrent measures adopted by the Collector of Stamp Revenue, Calcutta, in the case of unstamped and insufficienly stamped *hundis* and other documents. The floating of several limited companies during the triennium also contributed to the increase.

Miscellaneous receipts.—The receipts under this head are mainly composed of realisations under section 35 and sections 32, 37, 40 and 41 of Act II of 1899, adjudication fees and duty on debentures. The increase which

is exhibited under this head for the past year is entirely due to the realisation of Rs. 1,19,000, representing the duty on the Port Trust Debentures floated in the years 1900, 1903, 1905, 1906 and 1907 in a consolidated form. The failure to pay the stamp duty thereon at the time the loans were raised was brought to the notice of the Board. They did not think it necessary to treat the case as of wilful neglect, and called the attention of the Port Commissioners to the provisions of section 8 of the Indian Stamp Act, 1899, which require that the stamp duty should be paid immediately on issue of debentures by a local authority.

ARRANGEMENTS FOR THE SALE OF STAMPS.

* * * * The total number of vendors engaged in the sale of judicial and non-judicial stamps during the year 1907-08 was 2,884, showing a decrease as compared with the previous two years of 94 and 103 persons, respectively. In some districts the decrease is attributed to the cancelment of the licenses of a number of vendors for misconduct. In other districts the decrease is attributed to the removal from the list of persons who were only nominal stamp vendors and to the reduction in the number of stamp vendors so as to allow each a sufficient income from the sale of stamps. The decrease in Calcutta was attributed to the abolition of one-anna receipt stamps, the sale of which constituted a profitable source of income, and the discontinuance of discount on postage stamps, which led to the closure of the stalls of those vendors who dealt chiefly in such stamps.

Under the Central Provinces rules, licenses to sell stamps are issued to Sub-Post-Masters and village Schoolmasters by their official designation only, and the Deputy Commissioner grants them advances without prepayment and without requiring the vendors to furnish security for the advances. These vendors remit cash to the treasury by money-orders for purchase of stamps which are sent to them by insured parcels in return for cash, the Government bearing the cost of remitting the money and of insuring the stamp parcels. On the recommendation of the Commissioner of Orissa the Board agreed to the continuance of the practice in Sambalpur.

The expenditure on discounts allowed to stamp vendors during the past year exceeded that of the preceding year by Rs. 10,604 and that of the year 1905-06 by Rs. 13,905. There was an increase in respect of both judicial and non-judicial stamps and plain paper. The increase was the necessary result of increased sales. The average discount per vendor during the triennium under report was Rs. 67.

Since the discontinuance of the discount on postage stamps many complaints have been received in Calcutta regarding the difficulty of procuring such stamps in quarters where there are no post offices within easy distance. It has been reported that the Collector had frequently to force the existing vendors to keep a sufficient stock of one-anna and half-anna unified stamps for sale to the public, as required by the rules.

In the districts outside Calcutta there were few complaints during the period under report of difficulty or inconvenience in procuring stamps and the sales were on the whole properly conducted by licensed vendors.

The system of taking the thumb impressions of purchasers on the stamps themselves as well as on the vendors' registers, which was introduced in the district of Cuttack during the preceding triennium, was extended to the other districts of the Division during the period under report and is reported to have been attended with satisfactory results. In September 1907 the Commissioner of Orissa reported on the working of the system and recommended its general adoption. The matter is under consideration.

PUNITIVE ACTION OF THE COURTS AND REVENUE OFFICERS.

* * * * The total number of cases dealt with by the Civil Courts during the last year of the triennium was 1,724 in comparison with 1,342 in 1906-07 and 1,431 in 1905-06. There was an advance of Rs. 2,515 in the duty and penalty realised by the Civil Courts in comparison

with the realisations of the preceding year, and of Rs. 287 in comparison with those of 1905-06. The increase in the number of cases is probably due to a more careful examination of documents by Civil Courts. There was an increase of 72 in the number of cases decided, but a decrease of Rs. 12,965 in the duty and penalty realised by Revenue officers as compared with the figures of the preceding year, and a decrease of 50 in the number of cases decided but an increase of Rs. 4,609 in the duty and penalty realised in comparison with 1905-06. This is due to variations in the amount of consideration for which transactions were effected by the contracting parties.

* * * * The number of cases instituted was 567, in which 579 persons were brought to trial against 1,086 cases and 1,086 persons in the preceding year, and 667 cases and 650 persons in the year 1905-06. The fines imposed amounted to Rs. 4,429 against Rs. 6,388 in 1906-07 and Rs. 5,701 in 1905-06. The falling off in 1907-08 has been occasioned by the smaller number of cases detected in Calcutta and also to the greater scrutiny and check applied by the office of the Collector of Stamp Revenue, Calcutta, with regard to such cases in accordance with the recent orders of the Board on a representation by the Marwari Association referred to in the paragraph below.

The amount distributed in rewards was Rs. 4,351 against Rs. 5,805 and Rs. 3,173, respectively, in the preceding years. The number of persons convicted was 570 and the average fine imposed was less than Rs. 8. The adequacy of punishments inflicted has not been discussed by Divisional Commissioners, but these figures would appear to point to some leniency in the sentences passed. Outside Calcutta rewards are practically never given.

The increased activity in the prosecution of offences against the Stamp Act resulted in complaints in Calcutta. The Board received in 1906 from the Marwari Association, Calcutta, a representation stating that the provisions of the General Stamp Act relating to unstamped documents and insufficiently stamped documents were harshly worked in Calcutta to the serious inconvenience of the up-country trading community. The Association alleged that existing members of firms were held responsible for offences against the Stamp Law committed many years ago by their predecessors, that collecting servants of firms were held responsible, that notices requiring explanation did not always reach parties and that a proper hearing was not always given by the Collector of Stamp Revenue. They complained of the system of giving rewards to informers in stamp cases as holding out temptation to improper acts, and urged that penalties imposed should vary according to the gravity of offences and that individuals should not be made to suffer for acts of which they were morally innocent.

Having carefully considered all the matters urged by the Association, the Board were of opinion that the Collector should exercise special caution in instituting proceedings in the case of old documents. Whatever be the legal liability, the Board considered it reasonable to refrain from prosecuting members of a firm or from requiring them to compound under section 70 of the Act for offences committed by previous members of a firm with which they had no connection.

WORKING OF SECTION 19H ADDED TO THE COURT-FEES ACT, VII OF 1870, BY ACT XI OF 1899.

* * * * The amount of deficit duty realised fell from Rs. 15,819-11 in 1905-06 to Rs. 8,980-4 in 1906-07, but rose again by Rs. 11,251-12. Of the cases reported during 1907-08, 70·2 per cent. were enquired into; the corresponding percentages in the two preceding years were 78·8 and 84·2. The proportion borne by the deficit duty realised to the amount originally paid was 6·4, 3·02 and 3·4, respectively, during the three years of the triennium.

No case of serious undervaluation was discovered during the triennium under report.

STATEMENT I—*Abstract of Receipts and Charges for the year ending 31st March 1908.*

RESOLUTION ON THE ADMINISTRATION REPORT OF THE ORISSA PORTS FOR THE YEAR 1907-08.

No. 2632Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 24th August 1908.

RESOLUTION.

Administration Report of the Orissa Ports for the year 1907-08.

READ—

Letter from the Commissioner of the Orissa Division, No. 5860., dated the 4th July 1908, submitting the report on the Administration of the Orissa Ports for the year 1907-08.

THE receipts of the ports amounted to Rs. 6,522-3-9 during the year, as compared with Rs. 14,934 in 1906-07. The decrease of Rs. 8,411-12-3 in the receipts is due to smaller amounts being realized as port dues during the year, as the number of vessels visiting the ports in 1907-08 was much less than in the previous year. This is accounted for by a poor harvest as a consequence of which there was less rice available for export than is custumary.

2. The expenditure amounted to Rs. 17,732-5-3 against Rs. 13,871 in the previous year. The rise is chiefly due to increases of expenditure under the head "Pension" at Cuttack, and under "Petty construction and repairs" and "Dockyard services and supplies" at Balasore.

The receipts together with the opening balance of Rs. 8,216-5-1 amounted to Rs. 14,738-8-10. There was thus an excess expenditure of Rs. 2,993-12-5 which will have to be met by a contribution from Government.

3. The value of trade during 1907-08 was Rs. 54,45,337 against Rs. 1,04,22,811 in the previous year.

4. One hundred and fifty-seven vessels with an aggregate tonnage of 69,550 tons visited the ports during the year, against 226 vessels with an aggregate tonnage of 171,112 tons in the preceding year.

5. The passenger traffic between the Orissa Ports and Calcutta showed some slight increase during the year. The number of passengers, carried between Calcutta and Chandbali and *vice-versâ*, which form the bulk of the traffic, was 37,659 and 49,060 against 34,495 and 31,391 in the previous year.

6. The Port Officer of Calcutta inspected all the ports and light-houses during the year. They were found to be in a satisfactory condition. The erosion of the Shortt's Island on the sea face continues.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary.

WEATHER AND CROP REPORT.

For the week ending the 24th August 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	0·34	7½	7½	Rainfall at Kalna 3·70, Katwa 1·44 and Raniganj 2·49 inches. Weather hot and cloudy. Transplantation of winter rice nearly over. Early rice and jute slightly damaged by insects in parts of the district. No cattle-disease. Fodder and water sufficient. 434 persons given gratuitous relief in the Katwa subdivision.
2	BIRBHUM ...	1·86	7¼	7	Rainfall at Rampur Hât 2·14 inches. Weather seasonable. Transplantation of paddy finished. Fodder and water sufficient.
3	BANKURA ...	1·06	7½	7½	Rainfall at Vishnupur 1·23 inches. Weather seasonable. *Aus* paddy in ear. Prospects of crops good. Condition of agricultural stock fair. No cattle-disease Fodder and water sufficient. Common rice selling at 6 to 7 seers a rupee in the affected tracts. Persons gratuitously relieved on the 21st August—236 men, 690 women and 225 children—total 1,151.
4	MIDNAPORE ...	1·93	6	6	Rainfall at Contai 6·40, Tamluk 1·52 and Ghatal 2·71 inches. Transplantation of rice nearly finished. *Aus* paddy slightly damaged by insects and being cut. Prospects of jute, *til* and maize fair. Common rice selling at 7 seers per rupee at Contai, 6 seers at Tamluk and 7¾ seers at Ghatal.
5	HOOGHLY ...	2·38	6¼	6¼	Rainfall in the district general. Weather seasonable. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute and sugar-cane fair. *Aus* and *aman* paddy slightly damaged by insect-pests. Transplantation of *aman* paddy continuing. Cutting of jute commenced in the Serampore subdivision. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	1·68	6½	6¾	Weather seasonable. Rainfall at Uluberiah 2·06 inches. Transplantation of paddy still continuing both in the Sadar and Uluberia subdivisions. Prospects of jute fair. Fodder and water sufficient. No cattle-disease. Condition of agricultural stock good. Common rice selling at 6½ seers per rupee at Uluberia. Prices stationary.
7	24-PARGANAS	2·09	6	6	Weather seasonable. Rain sufficient everywhere. Condition of jute not favourable. Paddy damaged by insects in parts of Barasat, Basirhat and by recent heavy rains in parts of Basirhat and Diamond Harbour and in the Vishnupur, Bhangor and Jaynagore thanas in the Sadar subdivision. Common rice selling at 6¼ seers a rupee at Barasat, at 6¾ seers at Basirhat, and at 7 seers at Diamond Harbour and Barrackpore.
8	NADIA ...	1·27	6¼	6⅞	Rainfall at Ranaghat 1·92, Chuadanga 1·35, Meherpur 0·83 and Kushtia 0·80 inches. More rain wanted. Harvesting of *aus* paddy commenced. Prospects of standing *aus* and *aman* paddy and of jute fair. Insect-pests still doing damage in the Ranaghat and Sadar subdivision. Common rice slightly risen. Stocks of food-grains insufficient. Scarcity prevalent in the Meherpur subdivision. Condition of cattle fair. Fodder and water sufficient. Persons attending 24 test-works on 18th instant—5,074 men and 36 women—total 5,110. 2,359 persons given Rs. 1,510 as gratuitous relief.

No.	Name of district	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	0·46	7	7	Rainfall at Jangipur 2·12, and Lalbagh 2·31 inches. Light showers received during the week, but more rain wanted. Transplantation of *aman* paddy well nigh finished. Prospects of jute and sugarcane fair, except in the Kandi subdivision. Stocks of food-grains likely to be sufficient till the next harvest in the Sadar and Kandi subdivisions. No cattle-disease.
10	JESSORE ...	0·98	$7\frac{5}{8}$	$7\frac{7}{16}$	Rainfall at Jhenidah 1·78, Magura 0·81, Narail 0·74 and Bangaon 2·09 inches. Weather seasonable. Rainfall general. Harvesting of *aus* paddy going on in some parts and the transplantation of *aman* paddy continuing. Condition of jute not favourable. More rain urgently wanted. Stocks of food-grains being supplemented by imports of Burma rice. Condition of agricultural stock good on the whole. Fodder and water sufficient. No cattle-disease High prices continuing. 3,865 persons given gratuitous relief. District Board test-works stopped.
11	KHULNA ...	1·23	8	$8\frac{1}{2}$	Rainfall at Bagerhat 1·38 and Satkhira 2·53 inches. Rainfall general. Prices of staple food-crops stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. No apprehension of famine at present. Prospects of standing crops fair; that of jute not favourable. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	Nil	$6\frac{3}{4}$ 10*	7 $10\frac{1}{4}$*	Weather hot and occasionally cloudy. Absence of rain causing anxiety. *Bhadoi* crops and paddy seedlings withered in places. Transplantation of paddy seedlings retarded for want of rain except in irrigated areas. Prospects of standing crops not good. *Marua* being cut in places. Sugarcane doing well. Prices slightly risen. Food-grains being supplemented by importation from outside the district in course of trade. Cattle-disease reported from Barh and Dinapore subdivisions. Fodder and water sufficient.
13	GAYA ...	0·12	8 $9\frac{1}{2}$*	8 $9\frac{3}{4}$*	Weather hot, and cloudy with little rainfall. Rainfall during the week very slight and scattered. Prospects of sugarcane fair. *Bhadoi* crops and paddy suffering severely for want of rain. Paddy seedlings dying in many places. Rain very urgently wanted for paddy transplantation. Prices of food-grains rising. No cattle-disease. Fodder ample. Water for cattle sufficient.
14	SHAHABAD ...	0·28	8 9*	8 9*	Rainfall at Buxar 0·11, Bhabhua 2·67, Sasaram 1·62 and Dehri 1·15 inches. Transplantation of paddy continuing. Rain badly wanted for transplantation in non-irrigated areas. Sugarcane and *bhadoi* crops doing well. *Bhadoi* crops in the *Diara* lands seriously damaged by floods in the Ganges. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Condition of agricultural stock normal. Fodder and water sufficient.
15	SARAN ...	Nil	$7\frac{1}{2}$ 8*	$8\frac{1}{4}$ $10\frac{1}{4}$*	Weather hot. Rain wanted for *bhadoi* and paddy crops especially in the Sadar subdivision where there is cause for anxiety. Prices of staple food-grains at the Sadar subdivision risen. Food-stock resources external. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.

* The figures indicate the prices of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee. This week.	Price of common rice in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
16	CHAMPARAN ...	0·02	7¾ 10¼*	8 10⅛*	Weather hot and at times cloudy. Rainfall at Bettiah nil. Only local showers at some places during the week. Weeding of *bhadoi* crops continuing. Good rain urgently wanted for both local and transplanted rice. Prospects of jute and sugarcane fair as yet. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
17	MUZAFFARPUR	Nil	7½ 9¼*	8 10¼*	Rainfall at Sitamarhi nil and at Hajipur 0·06 inches. Transplantation of paddy stopped for want of rain. Early *marua* ripe for harvesting in the Sitamarhi subdivision. *China* being harvested in some places in Hajipur. Prospects of jute good in Pupri thana. Condition of agricultural stock fair. Rain very urgently wanted throughout the district. Standing crops suffering for want of moisture. Common rice and maize selling at 7½ and 9 seers a rupee, respectively, at Sitamarhi, and at 7¼ and 9¾ seers a rupee, respectively, at Hajipur. If no more rain falls, scarcity may arise.
18	DARBHANGA ...	0·21	7 9½*	8¼ 9*	Weather hot and at times cloudy. Rain urgently needed everywhere, but specially in the Madhubani subdivision. *Bhadoi* crops suffering and transplantation of paddy suspended for want of rain. Prices rising. Agricultural stock sufficient. No cattle-disease. Fodder and water available.
19	MONGHYR ...	0·04	6½ 9¼*	7 10*	Weather hot and cloudy during the day, but sky clear at night. Much anxiety caused by cessation of rain, and if rain withheld for sometime scarcity apprehended. Prices of food-grains almost stationary. *Bhadoi* crops suffering for want of rain in some parts. No cattle-disease reported. Fodder and water sufficient.
20	BHAGALPUR ...	0·20	7$\frac{9}{16}$ 9½*	8$\frac{5}{16}$ 10⅛*	Rainfall at Banka 0·32, Madhipura 0·35 and Supaul 0·48 inches. Weather hot, sometimes cloudy. Tansplantation of paddy almost at a standstill for want of sufficient rain except in places where there are *dones* and *bunds*. *Kutcha* wells being dug in some places in Madhipura and Supaul to save paddy seedlings. In Supaul, the outturn of *bhadoi* paddy and *marua* expected to be four annas. Prospects of jute poor in Supaul; fair elsewhere. Prices rising except in Supaul where they are stationary. Condition of agicultural stock good. No immediate apprehension of famine though the situation is critical. Cattle-disease reported from three mauzas in thana Protabganj in Supaul.
21	PURNEA ...	0 07	7	7	Weather hot and cloudy at times. Harvesting of *bhadoi* crops and of jute in progress. Condition of jute fair. Transplantation of *aghani* paddy at standstill for want of rain. The *aghani* paddy already transplanted withering for want of moisture. Rain urgently wanted. Stocks of food-grains and agricultural stock adequate. Cattle-disease reported from Forbesganj. Fodder and water sufficient. Common rice selling at 7 seers per rupee at Araria and at 6½ seers at Kishanganj.

* The figures indicate the price of maize in seers per rupee.

22	DARJEELING ...	1·68	7 10*	7 10*	Weather seasonable. Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi* paddy growing and being harvested in some places. Winter rice and *bara marua* being sown. Terai—Transplantation of winter rice still going on. Condition of standing crops not favourable. Rain badly wanted. Jute being harvested.
23	SONTHAL PARGANAS.	1·81	8† 9*	7 9*	Rainfall at Deoghur 0·45, Godda 0·20, Jamtara 1·47, Pakour 0·20, and Rajmahal 0·35 inches. More rain urgently wanted in the north of the district. Transplantation of paddy nearly over. Prospects of maize and jute fair Prices of staple food-grains falling. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Small loans being given to poorest cultivators. Fodder and water sufficient Common rice selling at 7 seers per rupee.
24	CUTTACK ...	8·00	$7\frac{3}{8}\frac{5}{7}$	$7\frac{3}{8}\frac{5}{4}$	Rainfall general. *Biali* paddy ripening. *Saradh* paddy, turmeric, cotton, jute and sugarcane standing on the ground. Condition of jute fair. Cattle generally in good condition. Prospects of standing crops good. 642 men, 1,596 women and 3,657 children—total 5,895—given gratuitous relief. 99 men, 293 women and 402 children—total 794—on test-works.
25	BALASORE ...	3·86	$7\frac{3}{8}$	$7\frac{3}{4}$	Weather seasonable. Rainfall at Bhadrak 2·48 inches. Puddling, transplanting and weeding of *saradh* paddy continuing. *Biali* paddy in ear. Sugarcane thriving. Prospects of jute fair. Vegetables doing well. Paddy plants in some places of Chandbali and Dhamnagar under flood-water. Stocks of food-grains insufficient. Scarcity existing in some places of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas. Common rice selling at $7\frac{1}{2}$ seers at Bhadrak. Fodder and water sufficient. 66 men, 339 women and 298 children—total 702—at Sadar, and 300 men, 2,040 women and 2,895 children—total 5,235—at Bhadrak receiving gratuitous relief. 12 men, 166 women and 64 children—total 242—attending test-works at Bhadrak.
26	ANGUL ...	3·05	5	6	Rainfall at Phulbani 3·34 inches. Standing crops doing well. Weeding of winter paddy and other crops in progress. Harvesting of maize and millets commenced at certain places. Condition of agricultural stock fair. Cheapest rice selling at $7\frac{1}{2}$ seers a rupee at Khondmals. Persons on gratuitous relief—119 men, 274 women and 664 children—total 1,057—in Angul, and 125 men, 169 women and 74 children—total 368—in Khondmals. Persons on test-works—399 men, 122 women and 81 children—total 602—in Angul, and 539 men, 93 women and 101 children—total 733—in Khondmals.
27	PURI ...	5·21	$6\frac{9}{16}$	$6\frac{9}{16}$	*Biali* paddy in ear. Weeding and transplanting of *saradh* paddy going on. Miscellaneous crops getting on well. Fodder and water sufficient. Persons attending test-works—men 319, women 170 and children 482—total 971. Recipients of gratuitous relief—men 349, women 1,271 and children 1,115—total 2,735. Men 31 and child one attending piece-work.

* The figures indicate the price of maize in seers per rupee.

28	SAMBALPUR ...	7·80	10	10	Transplantation, reploughing and weeding of winter rice in progress. *Maghi til*, *urid* and *karni* paddy being sown. Reaping of *gulji* commenced in Bargarh. Condition of standing crops—sugarcane, maize and *bhadoi til* good. No apprehension of famine or scarcity. Stocks of food-grains and fodder and water sufficient. Rinderpest in both tahsils. An insect-pest known locally as *mitakira* appearing in a few villages of the Bargarh tahsil. No damage done yet. Cheapest rice selling at 11½ seers a rupee at Bargarh.
29	HAZARIBAGH...	0·42	7¼* 9†	7¼* 9†	Weather seasonable. Harvesting of *gundli* and garden maize begun. Transplantation of winter rice continuing. Prospects of *bhadoi* crops and maize below the average, *gondli* bumper and *marua* above the average. Cattle-disease in one thana. Fodder and water sufficient. Burma rice selling at $6\frac{1}{16}$ seers and maize at $7\frac{7}{8}$ seers a rupee in the interior. Persons gratuitously relieved—men 628, women 1,812 and children 1,146—total 3,586. 444 Persons doing piece-work. No attendance on District Board works.
30	RANCHI ...	2·57	7½*	7¼*	Weather seasonable. Transplantation of winter rice nearly finished. Harvesting of *gondli* in progress. State of standing crops good. Cattle-disease reported from three thanas. Fodder and water sufficient. Common rice selling at 6 seers a rupee. Persons attending test-works—men 260, women 293 and children 60—total 613. Persons gratuitously relieved in the undeclared area—men 173, women 674 and children 53—total 900. Persons on famine relief-works in the declared area—men 3,091, women 3,429 and children 2,365—total 8,885. Persons on gratuitous relief in the declared area—men 1,010, women 2,636 and children 1,727—total 5,373.
31	PALAMAU ...	4·17	7⅞	7⅝	Weather seasonable. Transplantation of paddy continuing. *Bhadoi* crops doing well. Condition of local agricultural stock normal. Local grain stocks insufficient. Some cattle-disease. Fodder and water sufficient.
32	MANBHUM ...	1·68	8	8	Rainfall at Gobindpur 1·71 inches. Weather seasonable. State of standing crops good. Maize being reaped and *til* being sown in places. Fodder and water sufficient. Cattle-disease reported from thana Chirkunda. Condition of agricultural stock fair. Prices of staple food-grains practically stationary. Common rice selling at 7 seers per rupee at Dhanbaid. Stocks of food-grains adequate. Demand for labour good.
33	SINGHBHUM ...	6·21	6	6	Weather cloudy and rainy. Transplanting and weeding operations continuing. State of crops fair. No cattle-disease. Fodder and water sufficient. Common rice selling at 6 and 7½ seers a rupee at Kharsawan and Seraikella respectively.
34	COOCH BEHAR	0·28	$7\frac{13}{16}$	$8\frac{3}{16}$	Weather hot and cloudy. Harvesting of *bitri* paddy almost finished. Transplantation of *haimantik* paddy and steeping of jute retarded for want of rain. Condition of jute fair. Prices of food-grains shewing a tendency to rise. Fodder and water sufficient.
35	FEUDATORY STATE, ORISSA.	...	...	...	Report not received.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

General Summary.—The rainfall during the week was heavy in Cuttack, Puri, Sambalpur, Singhbhum and in parts of Midnapore, moderate in Balasore, Angul and in parts of Burdwan, and light in other districts, except Patna, Saran and Muzaffarpur, where there was no rain. More rain is wanted in Nadia, Murshidabad, Jessore and specially in Bihar districts, where the rainfall has been scanty and insufficient. The transplantation of *aman* paddy is at stand-still in Bihar, except in portion of Shahabad and Champaran and where irrigation is possible. Standing *bhadoi* crops and *aman* paddy seedlings are suffering on account of insufficient rain in Patna, Gaya, Muzaffarpur, Darbhanga, Monghyr, Bhagalpur and Purnea. Condition of jute is fair, except in Jessore, Khulna, Darjeeling and in parts of Murshidabad and Bhagalpur. Sugarcane is doing well. Prospects of standing crops are fair in Orissa, Chota Nagpur and in Lower Bengal. Damage by insects to paddy is reported from Burdwan, Midnapore, Hooghly, the 24-Parganas and Nadia. The Ganges has damaged some *bhadoi* crops in the *diara* lands of Shahabad. Paddy in Dhamnagar and Chandbali thanas of Balasore are under water. Stocks of food-grains are insufficient in Nadia, Murshidabad, Balasore and Palamau. The price of common rice has gone up in the districts of North Bihar and in Howrah, Nadia, Khulna, Patna, Monghyr, Bhagalpur, Angul and Hazaribagh, and has fallen in Birbhum, Jessore, the Sonthal Parganas and Palamau. Cattle-disease is reported from Patna, Bhagalpur, Sambalpur and in Chota Nagpur except Singhbhum. The supply of fodder and water is sufficient throughout the Province. The number of persons gratuitously relieved was 33,660, of whom 15,992 are in Orissa. The test-works in Nadia, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi were attended by 9,541 persons. The District Board test-works in Jessore have been closed. The number of persons on famine relief-works in Ranchi was 8,885.

The average fall of the corresponding period for 24 years, Surveyor-General's Office	45·69

The mean pressure, temperature, etc., are deduced from the traces of the Knudsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; d, drizzling rain; p, passing temporary showers; t, thunder.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE POLICE DEPARTMENT FOR THE YEAR 1907.

POLITICAL DEPARTMENT.—POLICE.

Dated Calcutta, the 2'th August 1908.

RESOLUTION No. 3074P.

READ—

The Report on the Administration of the Police Department for the year 1907.

Read also—

The Report for the year 1906 and the Resolution of Government thereon.

MR. C. J. STEVENSON-MOORE, I.C.S., held charge of the office of Inspector-General of Police for the first quarter of the year. Mr. A. V. Knyvett, C.I.E., officiated for him for the remainder of the year. The report has been written by Mr. L. F. Morshead, I.C.S., who relieved Mr. Knyvett on his retirement in March 1908.

2. Substantial progress was made during the year towards the reorganization of the staff in accordance with the proposals sanctioned by the Secretary of State in 1906. Nine Probationary Assistant Superintendents and eight Deputy Superintendents were added to the cadre. There was an increase in

the subordinate establishment of 20 Inspectors, 40 Sub-Inspectors, 150 Head-Constables and 792 Constables. The majority of this increased staff was appointed for investigation work. Three hundred and seventeen town chaukidars were replaced by Constables during the year. The replacement of the remaining 183 was left to be carried out on the arrival of recruits on completion of their training from the Constables' Training schools. A scheme is now under preparation for the reorganization of the River Police. New rules for the recruitment of Sub-Inspectors were introduced during the year. Under these rules candidates are nominated by District Committees, consisting of the District Magistrate, the Deputy Inspector-General of the Range and the Superintendent of Police. The nominees are then assembled for selection at different centres in the Province, the list of selected candidates being finally passed by the Inspector-General of Police. It would be premature at present to forecast the results which the new system of recruitment and the change in working practice will bring about. The investigating staff is passing through a transition stage, and the working of the new system will be watched with interest. It appears to be a defect in the rules that they do not provide for sufficient enquiry into the antecedents of candidates before they are registered as eligible. In a few cases candidates have been admitted into the force, who were afterwards found to be undesirable. This is especially likely to be the case when there is a difficulty in obtaining eligible candidates in any particular district and its vacancies have to be supplied from adjacent districts. The Lieutenant-Governor trusts that this defect will be speedily remedied.

Training Schools.

3. There was practically no change in the course of instruction prescribed at the Police Training College and the Constables' Training Schools. Good work was done at all these institutions. An interesting advance is being made in the introduction of a course of training in shorthand. Six selected cadets received training in shorthand at the Bhagalpur Church Missionary Society's Institution, but had not attained sufficient proficiency to be able to report at meetings. A special officer has recently been appointed to give instruction in this subject at the Training College and to work out a system of shorthand suitable to the Bengali language.

The Police Training College was removed to Ranchi at the close of the year. The Constables' Training School formerly at Purulia was removed to Berhampore in October.

Discipline.

4. The Lieutenant-Governor notices with satisfaction that the education of the force has been improved. Ninety per cent. of the officers and 32 per cent. of the men could read and write: in the previous year only 26·4 per cent. of the men were literate. The percentage of officers departmentally punished has, however, risen from 12·9 in 1905 and 17·5 in 1906 to 19 in the year under report. Thirteen per cent. of the men were departmentally punished as against 13·6 per cient. in 1906. The number of convictions under the Penal Code was 114, an ncrease of four over the figure for the previous year. Three charges of torture were brought against the police during the year, the same number as in each of the two preceding years. It is satisfactory to note that the number of charges of extortion brought against members of the force has steadily decreased. There were 37 such charges in 1905, 32 in 1906, and only 15 in 1907. The Lieutenant-Governor has no doubt that the improved pay and prospects of the police have already begun to lead to a steady improvement in morale. He agrees with the Inspector-General that what is chiefly wanted at present is to instil into Inspectors a greater sense of their own responsibility; and he anticipates that the efforts which are being made in this direction will produce increasingly good results in the discipline and conduct of the force.

Health.

5. The average daily percentage of sick in hospital has fallen from 1·8 in 1906 to 1·6 in the year under review. The figures show that the Burdwan Division is the most unhealthy; but Purnea is the worst individual district with a percentage of 4·2. Hooghly and Angul are the next most unhealthy districts.

Town Police.

6. Further steps have been taken towards the reform of the Town Police. The full force sanctioned has not yet been provided, but is being gradually worked up to as funds permit. As stated above, further progress has been made towards the complete replacement of town chaukidars by Constables. The results so far are certainly satisfactory. The Town Police succeeded in effecting an increased number of arrests. A new scheme of patrol has been introduced in Patna City and is now under consideration for general adoption.

Rural Police.

7. It cannot be said that the new system of chaukidari administration, which has been introduced in several districts of the Province, has produced all the results that were anticipated from it. The success of the system depends mainly on the selection of suitable persons to be Presidents of panchayats. In districts where this has been effected, the system has worked satisfactorily; but it cannot be denied that in other districts it has resulted in a loss of touch between the regular and the rural police. In some cases it may not be possible to obtain suitable Presidents. But the Lieutenant-Governor acknowledges with pleasure the success which has attended efforts really made in certain districts. His Honour desires also to record his appreciation of the public spirit of some zamindars who have given themselves to this work with most valuable results. Wherever the Presidents of panchayats are not in full sympathy with the administration or do not realise their responsibility for the work of the chaukidars, there has been delay in reporting crime, and the usefulness of the village chaukidar, as far as the surveillance of bad characters and assistance in investigation are concerned, has been, to a certain degree, impaired. The system is at present only tentative, and its working will be very carefully watched. It must, however, be observed that the officers who were most sanguine as to the success of this system always regarded it as a necessary condition to success that a whole-time Deputy Magistrate should be employed to supervise the work of the panchayats, attend to their recruitment and verify the administration in each district. It has not been possible as yet to appoint these officers; and until this has been done, the system can hardly have a fair trial. Meanwhile the Lieutenant-Governor trusts that the greatest care and tact will be exercised by District Magistrates and Superintendents of Police not only in selecting panchayats, but in seeing that the orders which have been passed as to their treatment and their relations with the local police are properly carried out.

The total number of chaukidars in the Province has been reduced by 2,000. The Lieutenant-Governor is satisfied that care has been taken to see that the number employed does not exceed local needs. There is still great diversity in different districts in the system of rewarding and punishing chaukidars. The average fine imposed upon chaukidars in the district of Gaya was Rs. 3-3; in the district of Hazaribagh it was 2 annas. In the latter district the amount paid in rewards fell from Rs. 1,180 to Rs. 90 in 1907. The Lieutenant-Governor reiterates his opinion that in some districts the punishments are too frequent or too severe, while in other districts too little attention is paid to the granting of rewards. He trusts that this matter will receive the careful attention of the Inspector-General.

Cognizable Crime.

8. The total number of reported cognizable cases differs by 410 from the figures for 1906. The number is high, and the excess over the average for the past decade must undoubtedly be attributed to the high price of grain. Excluding public nuisances and offences under special or local laws, the percentage of police cases resulting in conviction to cases decided, rose from 77 in 1905 and 80 in 1906 to 82 in the year under review,—a fact which seems to denote a continued improvement in investigation work. The percentage of convictions in Sessions cases was nearly the same as in the previous year. The number of cases declared false decreased from 3,392 in 1906 to 3,210 in 1907. This represents a little over 2 per cent. of the total number of cases reported. Patna and Shahabad are the districts in which these cases are most numerous. The percentage of such cases in which prosecutions were instituted under sections 182 and 211 of the Indian Penal Code has again fallen from 15·7 in 1905 and 12·8 in 1906 to 10·9 in the year under review. The percentage of convictions in such

cases has also fallen from 39·5 in 1906 to 37·6 in 1907. These results are very unsatisfactory. The attention of Magistrates was drawn to this important subject in the Resolution on the report for 1906; but the results this year are no better than before. The worst results are reported from Darjeeling, Birbhum and Manbhum. In the first named district there were 37 false cases: only one prosecution was instituted; and that proved unsuccessful. The results in Saran were the best, where 16 prosecutions were instituted, of which eleven proved successful. In Hooghly there were 12 prosecutions and 8 convictions. It appears that Magistrates are too often unwilling to assume the full responsibility for the opinion they have given in declaring a case false by proceeding to direct a prosecution. The percentage of cases in which prosecutions are undoubtedly advisable, and convictions might be expected to follow, could never perhaps be very high, but might certainly be higher than at present. There has been a considerable fall in the number of cases in which compensation was awarded under section 250, Criminal Procedure Code. The Lieutenant-Governor has again to notice with regret that Magistrates do not as a whole make sufficient use of this valuable provision.

Remands.

9. His Honour desires again to draw the special attention of all Magistrates to the necessity for the speedy disposal of cases. One cause of delays is undoubtedly the frequent transfer of officers; but, even when this is taken into account, the figures for remands are still unsatisfactory. The percentage of cases disposed of at the first two hearings has remained practically stationary, while that of cases remanded more than six times has again risen. The worst results come from the Patna Division, particularly the Patna district, where no less than 123 cases of the 953 sent up were remanded more than six times. This compares unfavourably with the next heaviest district, Midnapore, where there were almost the same number of cases, but only 15 were remanded over six times. It would assist Government to a more just appreciation of the work of the police and magistracy if it were possible to discriminate remands occasioned by the difficulty of tracing the antecedents of unidentified prisoners from those due to delay in bringing forward and recording evidence locally available; but any attempt to do so would probably occasion great difficulties in compilation.

Serious Crimes: Murder, etc.

10. The number of serious crimes against the person fell from 3,555 in 1906 to 3,452 in 1907. The number of murders rose from 284 to 306. Of these 306 cases, only 180 came before the Courts, and of these only 43 per cent. ended in conviction. These results are disappointing. The proportion of undetected cases is high; and the judicial results in detected cases cannot be considered satisfactory. The most important cases under this heading were the murder of the Maharaja of Sonbursa in Bhagalpur, and the murder of a European girl at Darjeeling by a corporal of the Artillery at Katapahar.

Rioting, etc.

11. The total number of rioting cases has slightly decreased, the decrease being shared by every Division except Burdwan and Chota Nagpur. As the decrease has been progressive for three successive years and accompanies an increase of preventive action under section 107, Criminal Procedure Code, it is a satisfactory feature. The increase in the Midnapore district of the Burdwan Division is attributed to political unrest. The increase in the Chota Nagpur Division is accompanied by a decrease in the number of cases in which persons were bound down to keep the peace under section 107, Criminal Procedure Code. The Lieutenant-Governor sees reason to infer that where this section has been sufficiently utilised the results have been good, and that where rioting tends to increase, sufficient use has not been made of it.

Dacoity, etc.

12. The number of dacoities has steadily if slightly decreased; 247 such cases occurred in 1905, 228 in 1906 and 204 in 1907. This figure is much below the average for preceding years, and the police are to be congratulated upon their success in dealing with this form of crime. The decrease is most noticeable in the Bhagalpur and Chota Nagpur Divisions, and is undoubtedly due to the successful prosecution of gang cases, and proceedings under section 110, Criminal Procedure

Code, particularly in Purnea and Manbhum. Purnea, however, still heads the list with 33 dacoities; but this figure is less by 17 than that for the previous year. The next worst districts are Shahabad with 21 and Midnapore with 17 cases In Manbhum the number of dacoities decreased from 27 in 1906 to 7 in 1907. There was a brief outbreak of dacoity in Sambalpur, and in Hooghly the number of cases rose from 6 to 12, 11 out of which were undetected. The number of burglary cases remained practically unchanged; and the number of theft cases slightly increased. The figures for these forms of crime are, however, considerably above the average of preceding years, an unfortunate but inevitable result of the high price of grain. The Sonthal Parganas still heads the list for cattle-thefts. Nevertheless, the number of these cases in this district has decreased from 403 in 1906 to 224 in 1907, a result attributable to the successful prosecution of some notorious cattle-lifters.

The Lieutenant-Governor notices a rather remarkable increase in the number of cases of arson. There were as many as 432 cases of arson in the year under review, 87 of which, however, were declared false. Midnapore was responsible for about 10 per cent. of the total number of cases in the Province; but the worst Division is the Presidency where there were as many as 109 true cases, only one of which ended in conviction. Some part of the increase in this form of crime is attributable to political unrest. The difficulty of obtaining evidence in cases of this nature and the steps necessary for prevention, are engaging the serious attention of Government.

Railway Police.

13. There has been a general increase of crime on all the Railway systems in the Province. The total number of cases reported to the Railway Police has risen from 7,875 in 1905 and 8,658 in 1906 to 10,348 in the year under review. The increase is chiefly in cases of minor offences against property. The figures, however, are somewhat delusive. The division of the Railways into smaller police charges has undoubtedly resulted in the maintenance of closer supervision and less concealment of petty crime. The increase in the volume of traffic and the extensions of the Railway systems (notably the Grand Chord on the East Indian Railway and the Purulia-Ranchi branch of the Bengal-Nagpur Railway) are probably as much responsible for the increase in the number of cases as the prevailing scarcity. The percentage of convictions to cases decided was 89·5 per cent. against 88·9 in the previous year. The number of obstructions on the line fell from 63 in 1906 to 48 in the year under review. The most important of these was the attempt to blow up the Lieutenant-Governor's train on the 5th December. There were three or four strikes on the Railway during the year, the most serious being the strike of European and Eurasian guards and drivers on the East Indian Railway in November. It was found necessary to despatch a Company of European troops from Calcutta to Asansol to maintain order; and detachments of military and armed police were stationed at other centres on the line. It is satisfactory to record that these precautions prevented any serious disturbance.

Criminal Investigation.

14. Mr. C. W. C. Plowden was in charge of the Criminal Investigation Department throughout the year. The operations of the Department, of which an interesting account is given in the latter portion of the report, were remarkably successful. Valuable work was done in dealing with organized gangs of thieves and dacoits; and the Department undertook in addition the investigation of a number of incidental cases of murder, forgery, and other serious crimes. The most important of these investigations was the enquiry into the attempt to derail the Lieutenant-Governor's train at Naraingarh on the Bengal-Nagpur Railway, referred to above. The enquiry resulted in the conviction of some Railway coolies. A number of gang cases were prosecuted with uniform success. As many as 93 per cent. of the persons tried were convicted. An interesting description is given of the break-up of a number of wandering gangs of Haburahs who were responsible for a formidable outbreak of road dacoity at the beginning of the year. These Haburahs were old jail-birds who hailed from the United Provinces. They moved into Bengal where they represented themselves as Karwals and Naths of a comparatively harmless type, and by this means succeeded for a time in diverting the suspicions of the local police.

The Criminal Investigation Department started active enquiries into their character and methods, which resulted in the arrest, on a given date, of all gangs of Karwals and Naths then halting in the Province. The identity of a number of them as Haburahs was established by means of finger-prints, and the true Karwal gangs were released. The results were excellent. Nearly 300 cases of dacoity, robbery and theft were traced to the gangs, most of whom were convicted in specific cases or bound down under section 110, Criminal Procedure Code. A large number were found to have as many as five or more previous convictions. It appears to be the case that the professional and hereditary criminal classes are steadily making more and more use of modern improvements in communication, so that they now appear in and exploit districts which had never heard of them before. It is also a difficulty in dealing with them that knowledge of their history and habits is practically an exclusive possession of the Criminal Investigation Department. The ordinary police, magistracy and public know little more than that there are some tribes of which they can distinguish perhaps the names of Naths, Bhars and Maghya Domes, which are specially addicted to crime. A clear and simple account of the principal criminal tribes, their characteristics, *modus operandi*, and area of operation would be of great service to the public and to the administration, since anything that tends to expose these pests of society must render them less dangerous. Other important cases in which the services of the Department were employed with success were the case of Bamapada Mukharji, a notorious swindler who was arrested at Ratlam, and the break up of the Calcutta-Midnapore gang of blackmailers. An interesting description of the methods of this gang is given on page 33 of the Report.

Continued progress is being made in the classification of finger-prints, the preparation of history-sheets and the photography of notorious criminals. Six Sub-Inspectors are being yearly deputed from districts to undergo a course of training in the finger-print system. The Lieutenant-Governor observes with satisfaction that the relations between the Department and the Calcutta Police and those of other provinces continue to be cordial.

15. The Police Department is still to some extent in a state of transition. Great improvements have been made in many departments. The strength of all ranks has been increased; and simultaneously with increase of numbers there have for years been continuous efforts at improvement in recruitment and training. To those who are brought into contact with police work the results are already apparent in many ways. If they are not equally visible in statistical results, it is perhaps because the changes are still far from complete, and cannot have nearly produced their full effects. It is also to be remembered that, with the degree of scarcity prevailing in some parts of the province and with the high prices which are universal, it is much that crime has been kept within normal limits. Finally, too, the advances made by the criminal classes in the utilization of all the instruments of modern civilization are not a matter of yesterday, but the growth of years, although it was long before any attempt was made to meet them by similar action on the part of the police; so that there has been great leeway to make up.

16. The Lieutenant-Governor has much pleasure in acknowledging the thorough administration of the department by Mr. Knyvett, and in thanking Mr. Morshead for his interesting report. His Honour is pleased to notice the names of the officers who have been specially recommended for good work. His acknowledgments are also due to Mr. Plowden for his services in the Criminal Investigation Department and to Mr. K. B. W. Thomas, Principal of the Police Training College.

ORDER.—Ordered that copies of this Resolution be forwarded to the Inspector-General of Police, the Commissioner of Police, Calcutta, and all Commissioners of Divisions for information.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

F. W. DUKE,

Offg. Chief Secy. to the Govt. of Bengal.

REPORT ON THE ROAD AND PUBLIC WORKS CESS OPERATIONS IN BENGAL DURING THE YEAR 1907-08.

NOTIFICATION.

No. 695R.P.—The 27th August 1908.—The following extracts from the Report of the Board of Revenue on the Road and Public Works Cess operations in Bengal for the year 1907-08 are published for general information.

C. E. A. W. OLDHAM,
Secretary to the Govt. of Bengal.

No. 3517A., dated Calcutta, the 21st August 1908.

From—E. LISTER, Esq., Offg. Secretary to the Board of Revenue, L. P.,
To—The Secretary to the Government of Bengal, Financial Department.

Member in charge: THE HON'BLE MR. R. T. GREER, C.S.I.

I AM directed to submit the Board's Report on the administration of the Road and Public Works Cesses for the year 1907-08.

* * * * * *

Rate, land-revenue demand and gross rental.

3. In the 30 districts in which the Act is in force, both cesses were, as in the preceding year, levied at the maximum rate of one anna in each rupee of the annual value of lands or annual net profits of mines and other immoveable properties. The Act is not in force in Angul, the Khondmals, Sambalpur and parts of the Sonthal Parganas, where it is being gradually introduced. The current demand of land revenue of the 30 districts was Rs. 2,84,13,360 and the valuation, or gross rental, amounted to Rs. 12,87,56,860.

Demands, collections, balances and remissions.

4. * * * * In the following table the demands, collections, balances, and remissions of the year are compared with the two preceding years:—

Year.	DEMAND.			Collections.	Percentage of total collections on current demand.	Balance.	Percentage of the balance on the total demand.	Remissions.
	Current.	Arrear.	Total.					
	Rs.	Rs.	Rs.	Rs.		Rs.		Rs.
1905-06 ...	69,55,856	13,50,895	83,06,751	70,59,858	101·4	12,66,104	15·2	69,916
1906-07 ...	70,11,936	12,70,766	82,82,702	69,56,766	99·2	13,48,585	16·2	1,12,743
1907-08 ...	71,20,946	13,51,746	84,72,692	71,97,473	101·07	12,83,256	15·1	67,756

The increase of Rs. 1,09,010 in the current demand, as compared with the previous year, was mainly due to revaluations and to the revision of assessments of mines and forests in various districts. The valuation of profits derived by the owners and occupiers of coal mines lying in the Asansol subdivision, as well as the general revaluation in the district of Burdwan, yielded an increase of Rs. 52,900 in the current demand. In Manbhum, the old demand was enhanced by Rs. 43,584, owing partly to the rise in the price of coal and partly to the careful ascertainment of the actual profits of the colliery owners. It is noticeable that, with the large increase in the current demand, there was an increase in collections of Rs. 2,40,707, giving a percentage of 101·07, as against 99·2 in the preceding year. The year opened with a balance of Rs. 13,48,585, and the outstanding balance at its close was Rs. 12,83,256. The percentage of the balance on the total demand fell from 16·2 to 15·1, and was less than in the preceding three years The remissions and reductions amounted to Rs. 67,756 only, as against Rs. 1,12,743 in the previous year. The largest remissions were granted in Gaya (Rs. 16,005), Burdwan (Rs. 7,595), Muzaffarpur (Rs. 7,582) and Hazaribagh (Rs. 7,433). In Gaya

the remissions were due mainly to the revision of the assessment of Mahal Deokali (belonging to the 7-annas Tikari estate) and certain Government estates; in Burdwan to the exemption of certain coal mines from assessment; in Muzaffarpur to the revision of assessment and other causes; and in Hazaribagh to the acquisition of lands for the construction of the Gaya-Barakar Railway and to the revision of assessment of mines and forests under Chapter V of the Cess Act.

* * * * * *

Working of the certificate procedure.

7. The number of certificates filed for the realisation of cess arrears was 80,502, as against 78,609 of the previous year. There was a noticeable increase in the number of institutions in Midnapore (984), Hooghly, including Howrah (3,131), Bhagalpur (899) and Balasore (1,101). The increase in Midnapore was due to defaults in voluntary payments, and in Hooghly, including Howrah, to the filing of certificates for all arrears of rent-free lands, which had been amalgamated with their parent estates, the demands in these cases being non-recurring. The increase in Bhagalpur was chiefly due to the fact that in the previous year certificates were issued only for arrears exceeding Rs. 5, while, during the year under report, certificates for sums below Rs. 5 had also to be issued in order to avoid limitation. In Balasore the increase is attributed to the filing of a large number of certificates to avoid limitation in case of petty arrears due from revenue-free estates. The decrease in the number of institutions is most marked in Saran (1,481), Darbhanga (1,585) and Monghyr (1,522). The decrease in Saran was due to the issue of certificates for the kist of January 1908 after the close of the year. That in Darbhanga was due to larger voluntary payments owing to better harvests, the percentage of collections having risen from 86·09 in 1906-07, when famine prevailed, to 113·4 during the year under report. The decrease in Monghyr is reported to be due to the fact that a number of certificates for the arrears of the third *kist* could not be filed within the year.

8. Including 22,367 certificates pending from last year, there was a total of 102,869 cases for disposal. Of these, 82,040 were disposed of during the year, leaving 20,829 cases pending at the end. The disposals exceeded the institutions in all the Divisions, except the Presidency and Orissa, and they were in excess of institutions by 1,538. The total number of certificates pending at the close of the year was less than in the preceding year, the percentage on the total number for disposal being 20·2 as against 21·7.

Objections against certificates.

9. The total number of objections against certificate cases was 5,455, of which 5,336 were disposed of. In the previous year the number filed and disposed of came to 6,096 and 5,998, respectively. In 941 cases, as against 770 in the preceding year, the certificates were cancelled on account of the death or desertion of judgment-debtors, double assessments, the exemption of lands lying within municipal jurisdiction, non-registration of names of rent-free land-holders, and errors in the Land Registration registers and the cess ledgers. The number of cases in which reductions were made in the certificate demand was 146, as against 175 in 1906-07.

Stage of procedure at which demands were satisfied.

10. The mere issue of notices was sufficient to secure payment in 22,803 cases; in 30,387 cases payments were made on the issue of notice for the sale of the defaulters' moveable properties, and in 16,463 on the issue of notice for the sale of immoveable properties. Of the total number of sales, 1,893 (as against 2,169 in 1906-07), 932 (as against 1,160 in the preceding year) were set aside under sections 20 and 21 of the Bengal Public Demands Recovery Act, I of 1895, as amended by Bengal Act I of 1897.

Valuations and revaluations.

11. * * * * During the year valuations or revaluations, partial or complete, were in progress in 18 out of the 30 districts in which the Act is in force.

12. General revaluations on an extensive scale were completed in Burdwan, Bankura, Darbhanga, and Palamau. The revaluation of Burdwan

was completed on 31st March 1908, and resulted in a total increase of Rs. 5,32,134 in the valuation and of Rs. 27,948 in the cess demand, amounting in each case to about 8 per cent. The operations in Bankura were completed in July 1907, and resulted in a decrease of Rs. 5,070 in the cess demand. This decrease was anticipated before the revaluation was taken in hand, because, in the previous revaluation, simple raiyati holdings had been treated as tenures and the assessment thereby artificially inflated. The general revaluation of the district of Darbhanga, which was commenced in 1906, was completed during the year. The result is a decrease of Rs. 10,193 in the cess demand, which was due to a more correct assessment on the basis of the settlement records. Here too the decrease was anticipated. In Palamau the new assessment yielded an increase of Rs. 28,317 in the cess demand.

* * * * * *

Gross rental.

16. * * * * The gross rental of the Province shows an increase of Rs. 20,25,598 over that of the preceding year, the increase being derived mainly from valuations and revaluations and the annual revision of assessments of mines and forests.

* * * * * *

Amendment of the Cess Act.

18. The proposals for the amendment of the Cess Act have during the year been submitted to the Government of India and sanction has been asked for the introduction of the Bill in the Bengal Legislative Council.

WEATHER AND CROP REPORT.

For the week ending the 31st August 1908.

No.	Name of district	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	4·17	7½	7½	Weather seasonable. Rainfall at Kalna 3·13, at Katwa 3·66 and at Raniganj 1·71 inches. Transplantation of winter rice over. Weeding of winter rice commenced. Condition of standing crops fair. Harvesting of jute and *aus* paddy going on. Jute damaged in places by excessive rain and insect-pests. Prospects of jute fair. 448 persons given gratuitous relief in the Katwa subdivision. No cattle-disease. Fodder and water sufficient.
2	BIRBHUM ...	4 43	7¼	7¼	Weather seasonable. Rainfall at Rampur Hât 3·90 inches. Weeding commenced. Fodder and water sufficient.
3	BANKURA ...	3 24	7½	7½	Weather seasonable. Rainfall at Vishnupur 2·25 inches. Prospects of crops good. Persons gratuitously relieved—men 235, women 679 and children 224—total 1,138—on the 28th August. Four test-works opened during the week. No cattle-disease. Fodder and water sufficient Condition of agricultural stock fair. Common rice selling at 6 to 7 seers per rupee in the affected tracts.
4	MIDNAPORE .	3·23	6	6	Rainfall at Contai 2 63, at Tamluk 2·96 and at Ghatal 2·51 inches. Transplantation nearly over. Prospects of winter rice good, of jute and *til* fair. Common rice selling at 7 seers per rupee at Contai, at 6 seers at Tamluk and at 7⅝ seers in Ghatal.
5	HOOGHLY ...	1·09	6¼	6¼	Weather seasonable. Rainfall in the district general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute and sugarcane fair. *Aus* and *aman* paddy improving. Transplantation of *aman* paddy continuing. Cutting of jute going on. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	4·30	6½	6½	Weather cloudy. Rainfall general during the week. Rainfall at Uluberia 0·90 inches. Transplantation of paddy still continuing in the flooded tracts of both the Sadar and Uluberia subdivisions. Prospects of *aus* paddy fair and of jute not good. Fodder and water supply sufficient. No cattle-disease. Condition of agricultural stock good. Common rice selling at 6½ seers per rupee at Uluberia. Prices stationary.
7	24-PARGANAS	5·93	6	6	Weather seasonable. Rain sufficient everywhere. Prospects of jute not favourable. Paddy damaged considerably by insects in Barasat, and by recent heavy rains in Mograhat, Fulta, Vishnupur, Bhangor and Jaynagore thanas. Rice selling at 6½ seers per rupee at Barasat, at 7 seers at Diamond Harbour and at 6½ seers at Barrackpore. Basirhat report not received.
8	NADIA ...	5 22	6¼	6½	Rainfall at Ranaghat 3·15, at Chuadanga 1·44, at Meherpur 2·59 and at Kushtia 0·50 inches. More rain wanted for *aman* paddy. Harvesting of *aus* paddy commenced. Prospects of standing crops fair. Harvesting of jute commenced in Kushtia. Prospects of jute not favourable in Meherpur and Ranaghat subdivisions. Price of common rice slightly falling. Stocks of food-grains insufficient Scarcity prevalent in Meherpur subdivision. Condition of cattle fair. Fodder and water sufficient. Persons attending test-works on 26th—3,045 men and 39 women—total 3,084. Gratuitous relief being discontinued. Reports incomplete.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	1·38	7	7	Weather cloudy. Rainfall at Lalbagh 6·51, at Kandi 2·88 and at Jangipur 2·54 inches. More rain wanted. Prospects of *aman* paddy favourable. Transplantation almost over. Prospects of jute fair. Harvesting of *aus* paddy commenced at places. Fodder and water sufficient. Stocks of food-grains likely to be insufficient till next harvest in the Sadar and Kandi subdivisions.
10	JESSORE ...	2·40	7⅝	7⅝	Weather seasonable. Rainfall at Jhenidah 1·65, at Magura 1·40, at Narail 1·31 and at Bangaon 2·71 inches. Rainfall general. Harvesting of *aus* paddy going on and that of jute commenced. Condition of jute not favourable. More rain urgently wanted. Stocks of food-grains being supplemented by imports of Burma rice. Condition of agricultural stock good on the whole. Fodder and water sufficient. High prices continuing. No cattle-disease. 3,610 persons given gratuitous relief. Price of common rice stationary.
11	KHULNA ...	1·40	8	8	Weather seasonable. Rainfall at Bagerhat 1·44 and at Satkhira 4·14 inches. Rainfall general. Prices of staple food-crops stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. More rain wanted. No apprehension of famine at present. Prospects of standing food crops fair, but of jute not favourable. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	6·74	6¾* 10†	6¾* 10†	Weather hot and cloudy. Much good done to the standing crops by the recent rain which has been most opportune. More rain still wanted for transplanting seedlings of winter rice on unirrigated areas. Harvesting of *bhadoi* crops commenced in places. Sugarcane doing well. Prices almost stationary. Food-stocks being supplemented by importation from outside. Fodder and water supply available
13	GAYA ...	4·78	8* 9½†	8* 9½†	Weather hot in the beginning and showery later on. The late rain throughout the district very beneficial to crops in the Jahanabad and Aurangabad subdivisions. Prices slightly fallen at Aurangabad. *Bhadoi* crops promising—about 12 annas. Transplantation of paddy going on briskly. More rain wanted for paddy transplantation in Nawadah. Fodder and water for cattle sufficient. No cattle-disease.
14	SHAHABAD ...	8·61	8	8 9†	Rainfall at Buxar 4·84, at Bhabhua 4·50, at Sasaram 3·70 and at Dehri 3·60 inches. Rainfall general. Transplantation of paddy in progress. Sugarcane and *bhadoi* crops doing well. More rain wanted for transplantation of paddy in the non-irrigated area. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Condition of agricultural stock normal. Fodder and water sufficient.
15	SARAN ...	2·60	8 9†	7½ 8†	Weather cloudy. Rainfall at Siwan 2·77 and at Gopalganj 1·26 inches Rain received throughout the district. More rain still wanted. *Bhadoi* crops in north-western half of the district are good, indifferent in southern half. Paddy transplantation continuing where rain fell sufficiently. Prices of staple food-crops almost stationary. Food-stock resources external. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee. This week.	Price of common rice in seers, per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
16	CHAMPARAN ...	1·00	$7\frac{3}{4}$ $10\frac{1}{4}$*	$7\frac{3}{4}$ $10\frac{1}{4}$*	Weather cloudy. Rainfall at Bettiah 3·80 inches. Good rain received in most places, but more rain still wanted in south-east of the district. Harvesting of *kodo* and *bhadoi* paddy commenced in some places. Transplantation of *aghani* paddy resumed. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient. Prospects of jute and sugarcane fair.
17	MUZAFFARPUR	1·58	$7\frac{1}{2}$ 10 *	$7\frac{1}{2}$ $9\frac{1}{4}$*	Weather hot and occasionally cloudy. Rainfall at Hajipur 6·33 inches. Transplantation of paddy re-commenced in Hajipur. Condition of standing crops improved by the recent rain. Prospects of jute good in Hajipur. *Bhadoi* crops slightly damaged by floods in the Gandak river. *Marua* being harvested in Sitamarhi subdivision. Transplantation of paddy stopped for want of rain in the Sadar and Sitamarhi subdivisions. Labourers feeling the want of employment in certain parts of Sitamarhi subdivision. Condition of agricultural stock fair. *Bhadoi* crops improved by recent rain in the Sadar subdivision. Jute suffering for want of moisture in Sitamarhi. Common rice and maize selling at $7\frac{1}{2}$ and $9\frac{1}{2}$ seers a rupee, respectively, at Sitamarhi, and at 7 and 9 seers a rupee, respectively, at Hajipur. No cattle-disease. Fodder and water sufficient. More rain very urgently wanted especially in the Sitamarhi subdivision. Prices slightly rising.
18	DARBHANGA ...	1·16	$6\frac{1}{2}$ $9\frac{1}{4}$*	7 $9\frac{1}{8}$*	Weather hot and cloudy. General rain received in the Samastipur subdivision and in Roserha thana of the Sadar subdivision which has been beneficial to the crops in these tracts. Rain urgently wanted in the Madhubani and Sadar subdivisions. Prospects of crops improved in the areas in which there has been rain, elsewhere suffering badly. Stocks sufficient. Fodder and water available. No cattle-disease. Prices rising.
19	MONGHYR ...	3·08	$6\frac{1}{2}$ $9\frac{1}{4}$*	$6\frac{1}{2}$ $9\frac{1}{4}$*	Weather hot and cloudy with occasional high winds and rain. Much-wished-for rain received and agricultural situation improved to a certain extent. Prices of staple food-grains stationary. Harvesting of *bhadoi* crops commenced in certain places. No cattle-disease reported. Fodder and water sufficient. Condition of agricultural stock good.
20	BHAGALPUR ...	0·64	$7\frac{9}{16}$ $10\frac{1}{8}$*	$7\frac{9}{16}$ $9\frac{1}{2}$*	Rainfall at Banka 0·23, Madhipura 2·10, Supaul 1·52 inches (subsequent to the period of report rainfall at Banka 1·20 inches). Weather hot and cloudy. Paddy seedlings and standing crops in Madhipura and Supaul much benefited by the recent rain. More rain wanted throughout the district. Transplantation of paddy at a standstill in the Sadar and Banka subdivisions except in places where there are *dams* and *bunds*. Condition of jute fair. No immediate apprehension of famine though the situation is critical. Prices of rice rising in Banka and Supaul and stationary elsewhere. Prices of *makai* in Sadar and of *marua* in Supaul falling.
21	PURNEA ...	1·28	7	7	Weather hot and cloudy at times. Transplantation of *aghani* paddy at a standstill for want of sufficient rain. Cutting of *bhadoi* paddy and jute going on. Prospects of jute fair. Stocks of food-grains and agricultural stock adequate. Fodder and water sufficient. Cattle-disease reported from Raniganj and Dhamadaha thanas. Common rice selling at $6\frac{1}{2}$ and 6 seers a rupee at Araria and Kishanganj, respectively.

* The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers per rupee. This week.	Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
22	DARJEELING ...	6·92	7 10*	7 10*	Weather seasonable. Rainfall at Siliguri 16·40 inches. Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi* paddy being harvested and standing in some places. Winter rice and *bara marua* being sown. Terai—Transplantation of winter rice, nearly finished. Jute being harvested. Prospects poor. Prospects of standing crops fair. Stocks of food-grains sufficient.
23	SONTHAL PARGANAS.	3·04	8† 10*	8† 9*	Rainfall at Deoghur 0·61, Godda 1·60, Jamtara 2·07, Pakour 1·76 and Rajmahal 4·33 inches. More rain wanted in Deoghur, Pakour and Godda. Transplantation of paddy still retarded in north Godda, where crops have been damaged by drought. Prospects of maize and jute fair Prices of staple food-grains falling. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Small loans being given to poorer cultivators. Fodder and water sufficient. Common rice selling at 7 seers a rupee at the Sadar Subdivision and Burma rice at 8 seers at Deoghur.
24	CUTTACK ...	4·07	$7\frac{7}{32}$	$7\frac{33}{64}$	Rainfall general. *Biali* paddy in ear and in some places ripening. *Saradh* paddy, sugarcane, turmeric, *arhar*, and cotton growing. Condition of jute fair. Fodder and water sufficient. Crops on low lands in flooded tracts still under water. 651 men, 1,797 women and 3,985 children—total 6,433—given gratuitous relief. 125 men, 203 women and 178 children—total 506— on test-works.
25	BALASORE ...	9·83	8	$7\frac{3}{4}$	Weather seasonable. Rainfall at Bhadrak 1·71 inches. Puddling closed. Transplanting and weeding of *saradh* paddy continuing. *Ashu* paddy maturing. Sugarcane and jute thriving. Prospects of jute fair. Vegetables doing well. Paddy plants of Chandbali. and Dhamnagar under flood water. Paddy plants on the banks of Burabalang, Jalka and Suberi narekha rivers under flood water. Stocks of food-grains insufficient. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali. Bhadrak, Baliapal, Basta and Jellasore thanas- Common rice selling at $7\frac{1}{2}$ seers per rupee at Bhadrak, Fodder and water sufficient. 79 men, 385 women and 397 children—total 861—at Sadar, and 343 men, 2,167 women and 3,102 children—total 5,612—at Bhadrak receiving gratuitous relief. 6 men, 99 women and 12 children—total 117—attending test-works at Bhadrak.
26	ANGUL ...	1·60	5	5	Weather rainy. Rainfall at Phulbani 2·75 inches. Sowing of *biri* and *til* retarded for heavy rain and harvesting of millets continuing. Condition of agricultural stock fair. Cheapest rice selling at $7\frac{1}{2}$ seers a rupee at Khondmals. Persons on gratuitous relief—57 men, 127 women and 430 children—total 614—in Angul, and 113 men, 147 women and 62 children—total 322—in Khondmals. Persons on test-works—425 men, 163 women and 103 children—total 691—in Angul, and 546 men, 133 women and 86 children—total 765—in Khondmals.
27	PURI ...	7·39	$6\frac{9}{16}$	$6\frac{9}{16}$	*Biali* paddy in ear. Weeding and transplanting of *saradh* paddy continuing. Miscellaneous crops getting on well. Fodder and water sufficient. Persons attending test-works—320 men, 133 women and 355 children—total 808. Recipients of gratuitous relief—351 men, 1,273 women and 1,118 children—total 2,742. 39 men on piece-works.

* The figures indicate the price of maize in seers per rupee.
† Burma rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather and state and prospects of the crops, etc.

1	2	3	4	5	6
		Inches.			
28	SAMBALPUR ...	6·05	9½	10	Transplantation, reploughing and weeding of winter and autumn rice in progress. *Til* and *urid* being sown. Reaping of *gulji* continuing in Bargarh. Condition of standing sugarcane crop good; of *bhado: til* fair. No apprehension of famine or scarcity. Stocks of food-grains and fodder and water supply sufficient. Rinderpest in Bargarh tahsils.
29	HAZARIBAGH...	3 14	7½* 9†	7½* 9†	Weather seasonable. Transplantation of winter rice almost finished. Cattle-disease in one thana. Rice selling at 5 seers to 8 seers per rupee in the interior and maize selling at 6 to 9 seers per rupee. New *marua* selling at 13⅜ seers and new *gondli* 24 seers per rupee. Persons gratuitously relieved—men 638, women 1,818 and children 1,139—total 3,595. 512 persons doing piece-works. No attendance on District Board works.
30	RANCHI ...	4·62	8*	7½*	Weather rainy. Transplantation of paddy practically finished. Sowing of *sirguja*, *urid*, *kurthi*, etc., in progress. Condition of standing crops except that of paddy good. Cessation of rain wanted for the *gora* crop. Cattle-disease reported from two thanas. Fodder and water sufficient. Common rice selling at 6½ seers per rupee at Sadar. Persons attending test-works—men 230, women 231 and children 87—total 548. Persons gratuitously relieved in undeclared area—men 68, women 319 and children 9—total 396. Persons on famine relief-works in declared area—men 2,568, women 3,302 and children 2,171—total 8,041. On gratuitous relief in declared area—men 1,109, women 3,013 and children 1,969—total 6,091.
31	PALAMAU ...	2 61	7⅞	7¼	Weather seasonable. *Bhadoi* crops doing well. Paddy transplantation continuing. Local grain stocks insufficient. Condition of agricultural stock normal. Fodder and water sufficient. Some cattle-disease.
32	MANBHUM ...	3·42	7½	8	Weather seasonable. Rainfall at Gobindpur 4·74 inches. State of standing crops good. Transplantation of winter rice finished. *Til*, *gunja* and *kurthi* being sown. Fodder and water sufficient. No cattle-disease. Condition of agricultural stock fair. Prices of staple food-grains practically stationary. Common rice selling at 7 seers per rupee at Dhanbaid. Stocks of food-grains adequate at present. Demand for labour good.
33	SINGHBHUM ...	3·67	6	6	Weather cloudy. Weeding operations of winter rice continuing. Fodder and water sufficient. No cattle-disease. Rice selling at 6 seers per rupee at Kharsawan and 7½ seers at Seraikella
34	COOCH BEHAR	4·54	7¼	7½¼	Weather hot and cloudy. Transplantation of *haimantik* paddy and steeping of jute almost stopped for want of rain. Condition of jute not good. Prices of food-grains showing a tendency to rise. Fodder and water sufficient.

* Husked rice.
† The figures indicate the price of maize in seers per rupee.

Copious rain throughout the week. Heavy rain in almost all States. Transplantation of paddy plants completed in Daspalla, Bonai, Talcher, Rairakhol, Nayagarh, Kalahandi, Boad, Athgarh and Mayurbhanj. Puddling completed in Nayagarh and continuing in Daspalla, Pal Lahera, Athmallik, Boad, Dhenkanal and Mayurbhanj. Weeding continuing in Keonjhar, Hindol, Daspalla, Pal Lahera, Baramba, Khandpara, Ranpur, Talcher, Dhenkanal, Nilgiri, Mayurbhanj and Rairakhol. Reploughing (*behura* operations) completed in Bonai and in progress in Kalahandi, Rairakhol and Patna. Standing crops in good condition but in Khandpara some damage done by floods to early paddy plants on the banks of the Mahanadi and Kusmi rivers while the *bajra* and *juar* crops in Athgarh much damaged by heavy rains. *Gora* paddy being harvested in Keonjhar. *Biali* rice crops in ear in Baramba, Athgarh, Dhenkanal, Nilgiri and Mayurbhanj. Fodder and water sufficient and also the agricultural stock, except in Narsingpur and Pal Lahera. Price of rice fallen in Nilgiri from 8 to 8½ seers per rupee, risen in Pal Lahera from 8 to 7 seers and stationary in other States.

* The report is for the week ending the 22nd August 1908.

GENERAL SUMMARY.—The rainfall was heavy in the 24-Parganas, Nadia, Patna, Shahabad, Darjeeling, Balasore, Puri, Sambalpur and in parts of Murshidabad and Muzaffarpur, moderate in the Burdwan and Chota Nagpur Divisions and also in parts of Khulna, Gaya, Champaran, Monghyr, the Sonthal Parganas and Cuttack and light in other districts. The rainfall during the week under report in South Bihar and in parts of Muzaffarpur, Champaran, Monghyr and Sonthal Parganas has done much good to the standing *bhadoi* crops and has enabled the raiyats to transplant some more *dhan* but more rain is urgently wanted in North Bihar and in the Bhagalpur Division both for transplantation of paddy and for the standing crops. The transplantation of paddy is nearly over in Bengal Proper, Orissa and Chota Nagpur. Harvesting of jute has commenced but steeping is being retarded in Cooch Behar for want of water. Harvesting of *bhadoi* paddy has commenced in some districts. Sugarcane is doing well. Prospects of jute are fair except in Howrah, the 24-Parganas, Nadia, Jessore, Khulna, Darjeeling and Cooch Behar. Damage by insect-pests is still reported from Burdwan and the 24-Parganas. Paddy plants on low lands in Cuttack and in Chandbali and Dham Nagar thanas of Balasore are still flooded. The price of common rice has risen in Saran, Darbhanga, Cuttack, Sambalpur and Manbhum and fallen in Nadia, Balasore, Hazaribagh and Ranchi. Stocks of food-grain are insufficient in Nadia, Murshidabad, Balasore and Palamau. Cattle-disease is reported from Purnea, Hazaribagh, Ranchi and Palamau. The supply of fodder and water is sufficient. Test-works have again been opened in Bankura. The number of persons on test-works in Nadia, Cuttack, Balasore, Angul, Puri, Hazaribagh and Ranchi was 7,070. The number of persons on gratuitous relief was 31,862, of whom 16,584 are in Orissa. The number of persons on famine relief works in Ranchi was 3,041.

The total fall from 1st January to 29th August 1908	69 65
The average fall of the corresponding period for 24 years, Surveyor-General's Office	48·40

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; d, drizzling rain; g, dark gloomy; p, passing temporary showers; t, thunder.

WEATHER AND CROP REPORT.

For the week ending the 7th September 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	0·72	7½	7½	Weather seasonable. Rainfall at Kalna 1·39, at Katwa 0·31 and at Raniganj 1·53 inches. Harvesting of jute and of *aus* paddy continuing. Condition of sugarcane fair and of winter rice good. 431 persons given gratuitous relief in the Katwa subdivision. No cattle-disease. Fodder and water sufficient. Prospects of jute fair.
2	BIRBHUM ...	0·80	7½	7½	Weather seasonable. Rainfall at Rampur Hât 0·73 inches. Weeding going on. Fodder and water sufficient.
3	BANKURA ...	2·00	7½	7½	Weather seasonable. Rainfall at Vishnupur 2·17 inches. Prospects of winter rice good. Persons gratuitously relieved—men 230, women 681 and children 213—total 1,124. People attending 5 test works—468 men, 389 women and 26 children—total 883—on the 4th September. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 6 to 7 seers per rupee in the affected tracts.
4	MIDNAPORE ...	1·39	6	6	Sky overcast. Rainfall at Contai 1·40, at Tamluk 3·97 and at Ghatal 3·92 inches. Prospects of autumn rice fair and of winter rice good. Jute and early cotton damaged by heavy rain. Sowings progressing. Common rice selling at 7 seers per rupee at Contai, 6 seers at Tamluk and 7½ seers at Ghatal.
5	HOOGHLY ...	2·71	6½	6½	Weather seasonable. Rainfall in the district general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute and sugarcane fair. *Aus* and *aman* paddy doing well. Cutting of jute going on. No cattle-disease. Fodder and water sufficient.
6	HOWRAH ...	1·81	6½	6½	Weather seasonable. Rainfall at Uluberia 0·87 inch. Transplantation on low lands still continuing. Prospects of rice fair, those of jute not good. Harvesting of *aus* paddy commenced at Uluberia. Fodder and water sufficient. No cattle-disease. Prices of food-grains generally stationary. Common rice selling at 6½ seers per rupee at Uluberia.
7	24-PARGANAS	1·79	6	6	Weather seasonable. Rain sufficient everywhere. Prospects of jute not favourable. Paddy damaged considerably by insects in Barasat, and Basirhat, and by excessive rain in Mograhat, Fulta, Vishnupur and Jaynagar thanas. Common rice selling at 6½ seers per rupee at Barasat, 6¾ seers at Basirhat, 7 seers at Diamond Harbour and at 6½ seers at Barrackpore.
8	NADIA ...	1·36	6¾	6½	Rainfall at Ranaghat 1·29, at Chuadanga 0·24, at Meherpur 0·40 and at Kushtia 0·01 inches. More rain wanted for *aman* paddy and for steeping of jute. Harvesting of *aus* paddy and jute continuing. Prospects of standing crops fair. Prices of common rice falling. Stocks of food-grains insufficient. Scarcity still prevailing in Meherpur subdivision. Condition of cattle fair. Fodder and water sufficient. Persons attending test works on 31st August—men 3,664 and women 31—total 3,695. Distribution of regular gratuitous relief stopped. Casual relief still being given.

9	MURSHIDABAD	0·90	7	7	Weather cloudy. Rainfall at Lalbagh 0·55 and at Kandi 1·13 inches. Rainfall during the week fair, but more rain still wanted in the Kandi and Lalbagh subdivisions. Condition of *aus* and *aman* paddy fair. Harvesting of *aus* paddy progressing. Condition of jute fair. No cattle-disease. Jangipur report not received.
10	JESSORE ...	0·55	8*	7⅞	Weather seasonable. Rainfall at Jhenidah 0·22, at Magura 0·16, at Narail 1·47 and at Bangaon 1·51 inches. Rainfall general. Harvesting of *aus* paddy and jute going on. Heavy rain urgently wanted for *aman* paddy. Stocks of food-grains being supplemented by imports of Burma rice. Condition of agricultural stock good. Fodder and water sufficient. No cattle-disease. High prices continuing. 3,404 persons given gratuitous relief.
11	KHULNA ...	0·82	8	8	Weather seasonable. Rainfall general. Rainfall at Bagerhat 1·87 and at Satkhira 0·81 inches. Prices of staple food-crops stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. More rain wanted. No apprehension of famine at present. Prospects of standing food-crops fair, but those of jute not favourable. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	1·22	7 12†	6¾* 10†	Weather hot and cloudy. Rainfall general, but not sufficient for transplantation of paddy seedlings on unirrigated areas. Heavy showers urgently needed. Harvesting of *bhadoi* crops continuing. Sugarcane doing well. Prices slightly decreased. Food-stocks being supplemented by importation from outside. Supply of fodder and water sufficient.
13	GAYA ...	0·85	8¼* 9½†	8* 9½†	Weather seasonable in the beginning of the week and showery later on. Transplantation of *aghani* paddy continuing but more rain wanted for this operation. Sugarcane doing well. *Marua* and *makai* being harvested. Rainfall during the week almost general, but scanty everywhere. Prices almost stationary with a slight fall at the Sadar subdivision. Fodder and water for cattle sufficient. No cattle-disease.
14	SHAHABAD ...	0·36	7¾ 10†	8	Rainfall at Bhabua 1·48, at Sasaram 0·09 and at Dehri 0·37 inches. Sugarcane doing well. Transplantation of paddy in progress, but more rain badly wanted. *Bhadoi* crops being harvested. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Condition of agricultural stock normal. Cattle-disease reported from two thanas. Fodder and water sufficient.
15	SARAN ...	0·87	9 10¼†	8 9†	Weather hot. Rainfall at Siwan 0·43 and at Gopalganj 1·12 inches. More rain wanted. Prices of staple food-crops slightly fallen. Scarcity apprehended in the northern half of the Sadar subdivision. Food-stock resources external. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.

* Burma rice.

		Inches.			
16	CHAMPARAN ...	4·11	7½ 10⅛*	7¾ 10¼*	Rainfall at Bettiah 2·74 inches. Prospects of early and winter rice much improved by good and general rain. Maize doing well. Transplantation of winter rice continuing. Condition of agricultural stock good. Fodder and water sufficient. Prospects of jute and sugarcane fair.
17	MUZAFFARPUR	1·35	8 10¼*	7½ 10*	Weather gloomy. Rainfall at Sitamarhi 0·35 and at Hajipur 0·21 inches. More rain reported subsequently at Sitamarhi and in varying degrees at other places in the district. Condition of standing crops much improved by rain. Prospects of jute favourable. Harvesting of *marua* commenced in Sitamarhi subdivision, and that of *makai* and *china* going on in places in Hajipur subdivision. Condition of agricultural stock fair. Heavy rain urgently required for transplantation of paddy. Common rice and *makai* selling at 7½ and 9¼ seers per rupee, respectively, at Sitamarhi, and at 7½ and 10¼ seers a rupee, respectively, at Hajipur. No cattle-disease. Fodder and water sufficient.
18	DARBHANGA ...	2·84	7 9¾*	6⅛ 9¼*	Weather hot and cloudy. Good rain received yesterday and this morning, which will be very beneficial if general. Transplantation of paddy retarded everywhere for want of rain. *Bhadoi* crops and seedlings suffering greatly. Rain urgently wanted, especially in Madhubani subdivision, and in Bahera and Rosera thanas. Stocks of food-grains sufficient. Fodder and water available. No cattle-disease.
19	MONGHYR ...	3·13	6¾ 9½*	6½ 9¼*	Weather cloudy and rainy. Prospects of crops improved by the recent rain. In Jamui more rain urgently wanted, without which the agricultural situation will be serious. Stock of food-grains sufficient. Prices of food-grains almost stationary. Cattle-disease reported from four villages in the jurisdiction of Bakhtiarpur thana.
20	BHAGALPUR ...	1·11	7⅜ 10⅛*	7 9/16 10⅛*	Weather hot in the beginning of the week, but cloudy later on. Rainfall at Banka 3·57, at Madhipura 0·55, and at Supaul 0·08 inches. Paddy seedlings in the Banka and Sadar subdivisions much benefited by the recent rain. Transplantation of paddy in progress where there are *dams*, *bunds* and sufficient water. More rain wanted throughout the district. Harvesting of *marua* begun in Supaul. No cattle-disease reported. Condition of jute not favourable in Supaul, fair elsewhere. No immediate apprehension of famine, though the situation still critical.
21	PURNEA ...	0·41	7	7	Weather hot and cloudy. Transplantation of *aghani* paddy almost at a standstill for want of sufficient rain. Reaping of *bhadoi* paddy and jute going on. Condition of jute fair. Prospects of standing crops fair. Stocks of food-grains and agricultural stock adequate. Fodder and water sufficient. Cattle-disease reported from thanas Dhamdaha, Forbesganj and Raniganj. Common rice selling at 6 seers per rupee at Kishanganj and Araria.

Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi dhan* being harvested and growing in some places. Winter rice and *bara marua* being sown. Terai—Transplantation of winter rice still going on in some places. Harvesting of jute in progress. Some good done to the standing crops by the recent rain. Food-grains and agricultural stock sufficient.
23	SONTHAL PARGANAS.	1·34	8* 10½†	8* 10†	Rainfall at Deoghur 1·68, at Godda 1·15, at Jamtara 2·75, at Pakour 2·58 and at Rajmahal 0·75 inches. More rain urgently wanted in Godda and Rajmahal. Transplantation of paddy still retarded in north Godda, where crops have been damaged by drought. Prospects of maize fair and of jute indifferent. Prices of staple food-grains falling. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Small loans being given to poorer cultivators. Burma rice selling at 8 seers per rupee at Deoghur and common rice selling at 7⅝ seers per rupee at Dumka and Deoghur.
24	CUTTACK ...	3·13	$6\frac{7}{8}$	$7\frac{7}{32}$	Rainfall general. *Biali* paddy being harvested. *Saradh* paddy, sugarcane, turmeric and *arhar* growing. *Mandia* in ear. Condition of jute fair. Condition of cattle generally good. Fodder and water sufficient. Prospects of standing crops good except in flooded tracts. 659 men, 1,797 women and 3,859 children—total 6,315—given gratuitous relief. 108 men, 181 women and 158 children—total 447—on test-works.
25	BALASORE ...	0·90	8	8	Weather hot and cloudy. Transplanting and weeding of *saradh* paddy continuing. Harvesting of *bhadoi* paddy commenced in places. Sugarcane and jute thriving. Prospects of crop fair. Miscellaneous crops getting on well. Paddy plants on low lands in Chandbali and Dhamnagar under flood water for a long time and probably destroyed entirely over about 150 square miles. Less damage done in other parts. Stocks of food-grains insufficient. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas. Common rice selling at 7½ seers a rupee at Bhadrak. Prices stationary. Fodder and water sufficient. 80 men, 429 women and 388 children—total 897—at Sadar, and 367 men, 2,354 women and 3,330 children—total 6,051—at Bhadrak receiving gratuitous relief. Test-works all closed.
26	ANGUL ...	4·46	5	5	Weather showery. Rainfall at Phulbani 2·25 inches. Harvesting of *bhadoi* paddy commenced at certain places. Sowing of *rabi* crops in progress. Condition of agricultural stock fair. Common rice selling at 7½ seers a rupee in the Khondmals. Persons on gratuitous relief—63 men, 159 women and 472 children—total 694—in Angul, and 125 men, 177 women and 74 children—total 376—in the Khondmals. Persons on test-works—319 men, 104 women and 77 children—total 500—in Angul, and 330 men, 80 women and 84 children—total 494—in the Khondmals.
27	PURI ..	3·29	$6\frac{9}{16}$	$6\frac{9}{16}$	Rainfall at Khurda 3·14 inches. Transplantation and weeding of *saradh* paddy continuing. Sugarcane in Khurda being damaged by a pest locally called *manjakila*. Vegetables doing well. Paddy plants in the east of Kakatpur largely ruined for having been under flood water for a long time. *Biali* paddy and *mandia* on high grounds ripening. Other miscellaneous crops doing well. Common rice selling at 7½ seers at Khurda. Persons attending test-works—210 men, 85 women and 241 children—total 536. Recipients of gratuitous relief—359 men, 1,402 women and 1,257 children—total 3,018. 12 men attending piece-works.

* The figures indicate the price of maize in seers per rupee.

Weeding in progress in all States. Sowing of *til* commenced in Kalahandi and Keonjhar, while lands being prepared in Boad, Dhenkanal, Hindol and Baramba. Standing crops in good condition. Sugarcane growing well. Cotton flowering in Nayagarh. Some damage done to paddy plants in the riparian tracts in Baramba, Narsingpur, Tigaria and Athgarh. *Bhadoi* rice crops in Baramba, *gora* paddy in Keonjhar, maize in Keonjhar and Dhenkanal and *biali* rice crops in Athgarh being harvested. Fodder and water sufficient and also the agricultural stock, except in Narsingpur and Pal Lahera. Price of rice fallen from 9 to 10 seers per rupee in Patna, 8 to 8½ in Boad, 7 to 8 in Mayurbhanj, 8½ to 9 in Nilgiri, 5¼ to 5½ in Keonjhar and stationary in other States.

* The report is for the week ending the 29th August 1908.

General Summary.—The rainfall was general this week, but there is still a tract in North Bihar stretching across the north of Champaran, Muzaffarpur and Darbhanga where rain is still required and transplantation of paddy is retarded throughout North Bihar and the Bhagalpur Division. The recent rains in Patna, Gaya, Shahabad and the south of Champaran have rendered transplantation possible and improved the prospects of the *bhadoi* crops. The prospects of the *aman* crop are fair throughout the province (except in the portion of North Bihar referred to above), but some tracts in Puri and specially in Balasore have suffered from floods. The harvesting of jute and *aus* paddy is going on: the prospects of the jute crop are fair in Murshidabad and Purnea, but are not good in the other main jute growing districts. Insect-pests are still causing some damage in the 24-Parganas and Puri. Prices have risen in Shahabad, Champaran, Cuttack, Ranchi, Palamau and Cooch Behar. The stock of food-grains is reported to be insufficient in Nadia, Balasore and Palamau, and it is reported that scarcity is apprehended in a portion of the Saran district. Cattle-disease is reported from Shahabad, Monghyr, Purnea, Sambalpur, Hazaribagh, Ranchi and Palamau. The test-works in Balasore have been closed, but there are still large numbers of people receiving gratuitous relief. Test-works in Bankura, Nadia, Cuttack, Angul, Puri, Hazaribagh and Ranchi were attended by 7,212, while gratuitous relief was given to 33,366, of whom more than half are in Orissa. The famine relief works in Ranchi were attended by 7,300 persons

Department of Agriculture, Bengal,
Calcutta, the 8th September 1908.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

SUMMARY OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL AND IN EASTERN BENGAL AND ASSAM FOR THE MONTH OF JUNE 1908.

THE Bay current arrived this year not far from the normal date, the actual date of establishment of the rains being about two days late in Bengal and five days in Behar and Chota Nagpur. The storms that were associated with its advance in this month were of a feeble character, although very heavy rain accompanied their passage inland. The tracks were somewhat abnormal in direction, probably owing to the weakness of the Arabian sea current, which usually feeds into the Bay disturbances after their passage inland and constrains them to take a trajectory across Northern India in some westerly direction. The first storm in the Bay formed close to the Sandheads on the 16th and 17th and drifted slowly in a northerly direction during the next four days. As is usually the case with slow moving storms, it tended to concentrate rainfall over the small area directly affected by it, and the present one was remarkable for the heavy rain it caused in Calcutta, where a total of 18·10 inches was recorded between 8 hours of the 17th and the same hour of the 19th. On the 23rd the depression either changed its course abruptly to the west or disappeared, while a fresh one appeared in a more westerly position. It then passed westwards through the Central Provinces and became merged in the trough of low pressure, which usually stretches at this time of the year from the Punjab to Bengal along the Gangetic plain. Towards the close of the month there was a marked falling off in the rainfall given by the Bay monsoon, and on the 30th a fresh depression formed at the head of the Bay.

Summary of Temperature.—Mean temperature was in general excess over the whole area, the departure being greatest in Chota Nagpur and Behar, where the average mean was about 2° above the normal mean of the month. The highest temperature recorded was 114° 3 at Dehri and the lowest 65°·4 at Monghyr.

The following table gives the summary of the temperature of each of the seven meteorological divisions of the Provinces of Bengal and of Eastern Bengal and Assam for the month of June 1908:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.					
	Highest observed during month.	Lowest observed during month.	Average for month.			Average mean of month above or below normal mean of month.
			Of highest of each day.	Of lowest of each day.	Of mean for each day.	
Bengal	109·5	71·2	93 0	79·3	86·2	0
Eastern Bengal, North	102·1	67·1	89·6	77 0	83·3	+ 0·1
Eastern Bengal, South	96·3	68 4	88 7	77·3	83 0	+ 0·4
Bihar	114·3	65·4	98 1	80·2	89·1	+ 1·9
Orissa	113·1	66·6	93 7	80 2	87·0	+ 0·6
Chota Nagpur*	112 8	70·4	98·1	79 4	88 8	+ 2·2
Assam	95·5	70·8	89·1	76·6	82·8	+ 0·4

* Purulia not included.

Summary of Rainfall.—The rainfall work of the Province has been placed in the hands of the Director of Agriculture, Bengal, and the usual data regarding the actual and normal rainfall during the month are published by that officer. A short table, however, is attached to this report, giving the rainfall recorded during the month at the head-quarters of the various districts of the Province. Rainfall was very irregularly distributed. There was an excess of 72 per cent. in Bengal. Chota Nagpur received its normal amount, but elsewhere there was a general defect, which reached 51 per cent. in Behar.

Actual and average rainfall and departure from normal for the month of June 1908.

The total fall of rain from 30th August to 5th September 1908	1 74
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·25
The total fall from 1st January to 5th September 1908	71 39
The average fall of the corresponding period for 24 years, Surveyor-General's Office	50 65

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain; t, thunder; <, lighting.

METEOROLOGICAL OFFICE, GOVT. OF INDIA,

REPORT ON THE WORKING OF THE LICENSED JUTE WAREHOUSE AND FIRE BRIGADE ACT, 1907-1908.

NOTIFICATION.

No. 1559M.—The 15th September 1908.—The following are republished for general information.

C. E. A. W. OLDHAM,
Secy. to the Govt. of Bengal.

No. 66M., dated Calcutta, the 27th July 1908.

From—J. G. CUMMING, ESQ., I.C.S., Offg. Commissioner of the Presidency Division,
To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit herewith copies of the reports on the working of the Licensed Jute Warehouse and Fire Brigade Act, I (B.C) of 1893, for the year ending the 31st March 1908, in the Cossipore-Chitpur, Maniktala and Garden Reach Municipalities, as received from the Chairmen of those Municipalities.

Annual Report on the working of the Licensed Jute Warehouse and Fire Brigade Act for the year 1907-08 from the Chairmen of Cossipore-Chitpur, Maniktala and Garden Reach Municipalities.

No. M. $\frac{240}{5}$ of 1908-09, dated Alipore, the 18th July 1908.

Memo. by—The Magistrate of the 24-Parganas.

COPIES submitted to the Commissioner of the Presidency Division for information.

No. 804, dated Talla, the 11th July 1908.

From—Babu Kripa Nath Dutta, Chairman, Cossipore-Chitpur Municipality,
To—The Magistrate of the 24-Parganas, Alipore.

In compliance with the request made in your letter No. M $\frac{240}{1}$ of 1908-09, dated 13th June 1908, I have the honour to submit the following report on the working within this Municipality of the Jute-Warehouse and Fire-Brigade Act during the year 1907-08 for submission to the Local Government as required by section 41 of that Act.

2. During the year of report there were 12 jute press-houses, 1 cotton-ginning factory, 171 jute godowns, 8 roperies, 3 golepatta and 4 wood depôts. Licenses were granted to all of these during the year and the total amount of license and mutation fees levied from them was, as detailed below, Rs. 15,725-14-6 .—

		Rs.	A.	P.
12	Jute press-houses	8,580	0	0
1	Cotton-ginning Factory	112	1	9
171	Jute godowns	6,752	7	9
8	Roperies	171	3	3
3	Golepatta depôts	8	6	6
4	Wood depôts	11	11	3
	Mutation fee	90	0	0
199	Total ...	15,725	14	6.

3. The subjoined statement shows the receipts and disbursements during the year under report .—

Receipts.

	Rs.	A.	P.
Opening balance on the 1st April 1907 ...	7,527	6	5
License and mutation fees received ...	15,725	14	6
Total ...	23,253	4	11

Disbursements.

	Rs.	A.	P.
Paid to the Commissioner of Police for the maintenance of the Metropolitan Fire-Brigade	12,114	0	0.
Balance on the 31st March 1908	11,139	4	11.
Total ...	23,253	4	11.

4. I submit herewith copies of the statements received from the Commissioner of Police, Calcutta, showing the names of the places where fire broke out during the year of report, the properties destroyed by fire and the approximate value thereof. The total approximate value of the properties destroyed was, as will be seen from the statements, about Rs. 2,38,712-5.

5. The names of the license-holders and the numbers of the holdings and the names of the streets in which the juteware houses were situated, are shown in the statement annexed.

Statement showing the account of fires which occurred during the year 1907-08 within the jurisdiction of the Chitpur thana.

Section.	Name of Street or Mohulla.	Name of owner of the property destroyed.	Duration of fire.	Description of property destroyed.	Approximate value of the property destroyed.

Sub., 12th February 1908.	Teshi Gola at No. 67-36, Belgachia Road.	Jute belonged to Luchman Shah and the godown belonged to Jiban Krishna Ghosh.	For about 12 or 14 hours.	Jute godown a corrugated shed.	17,800

The 26th May 1908.

SATISH CHANDRA ROY,
Sub-Inspector, C. Sub.

No. 492, dated Calcutta, the 24th June 1908.

From—R. D. MEHTA, Esq., C.I.E., Chairman, Maniktala Municipality,

To—The Magistrate of the 24-Parganas.

WITH reference to your letter No. M249 of 1908-09, dated the 13th June 1908, calling for a report on the working of the Licensed Jute-Warehouse and Fire-Brigade Act in this Municipality for the year 1907-08, I have the honour to report that the share of expenditure allotted to this Municipality by the Commissioner of Police was Rs. 1,211, which was discharged by two instalments.

The revenue during the year under review amounted to Rs. 3131-1-9.

The annexed statement will show the number of warehouses and licenses issued during the year under review.

License fees were levied on jute warehouses at 4 and 6 per cent. on the annual value and at 10 per cent. on trades of other descriptions mentioned in the statement and the fees were duly paid.

The jute godowns, fire-wood, packing case, hay and straw depôts are mostly situated near the Circular Canal which forms the northern, western and southern boundaries of this Municipality, Soorah Jute and Messrs. W. M. Briggs & Com's jute mills are the two mills within this Municipality situated in the north of Narkeldanga main road.

Maniktala Municipality.

R. D. MEHTA,

Chairman.

No. 121G.M., dated Calcutta, the 20th June 1908.

From—H. M. PEAT, Esq., Chairman, Garden Reach Municipality,

To—The Magistrate of the 24-Parganas, Alipore.

WITH reference to your No. 142M. of 1908-09, dated the 13th instant, I have the honour to submit the following report on the working of the Licensed Jute-Warehouse and Fire-Brigade Act in the Municipality for the year 1907-08.

2. During the year under review licenses were granted to 29 warehouses, including wood, fire-wood and straw-depôts and the amount of license fees levied was Rs. 1,047-8. Besides the above a sum of Rs. 99 was realized under section 25, clause (*b*) of the Fire-Brigade Act, in respect of the Kapidanga, the Batical and the Kasaipara bustees. The total revenue, therefore, was Rs. 1,146-8 and the share of expenditure allotted to this municipality by the Commissioner of Police, which was discharged by two instalments, was Rs. 2,019. This deficit of Rs. 872-8, which was due to levy of license fees in respect of warehouses in strict accordance with the provisions of section 10 of the Fire-Brigade Act, was met from the general funds of the municipality.

3. There was no fire of a serious nature in the municipality during the year under report.

4. A statement of licensed warehouses within this municipality during the year 1907-08 is submitted below :—

List of Warehouses during 1907-08.

No. 8404, dated Calcutta, the 30th July 1908.

From—F. L. HALLIDAY, M.V.O., Commissioner of Police, Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit, in accordance with section 41, Act I of 1893, the following report on the working of the Fire Brigade in the town and suburbs of Calcutta and in Howrah during the year 1907-08.

2. The force at the close of the year under review is shown in Appendix I attached. There has been no alteration in the strength of the Fire Brigade during the year under review.

3. A statement showing the receipts and expenditure of the Fire Brigade Fund is shown in the Appendix II.

The year opened with a balance of Rs. 20,471-9-9, the receipts amounted to Rs. 83,709-4-6 and the total expenditure to Rs. 96,089-6-3, leaving a balance of Rs. 8,091-8-0, at the close of the year.

Receipts.—Fees under the Petroleum Act were better than the estimate by Rs. 390; hire of engines and judicial fines under the Act realised Rs. 1,208 and Rs. 52 respectively, but there was a less amount realised by the sale proceeds of unserviceable stores and recovery of telephone rent. The net result was an actual increase in receipts of Rs. 1,247-4-6 over the estimate.

Expenditure.—

(*a*) Under the head of "Establishment" there was an increase over the Budget Estimate due to the grant of grain compensation allowance. The amounts shown in the "Decrease" column represent savings of Rs. 1239-1-5 on account of vacancies in the khalasi staff.

(*b*) The net increase under the head of "Contingencies" was principally due to an additional charge on account of pension owing to the retirement of the Chief Engineer and to the purchase of two horses.

(*c*) Under the head "Other charges" the increased expenditure of Rs. 842-5-4 was due to the fact that the cost of establishment for collection of rates for the year 1906-07 was paid during the year under report to the Cossipore-Chitpur Municipality.

4. One hundred and forty-eight fires of all degrees occurred during the year 1907-08.

Thirty-six serious fires in Town, River and Docks, 24 in the suburbs and 10 in Howrah and a further one in the Aratoon Jute Mill at Dakindary Road, Dum-Dum, at which the Fire Brigade attended.

There were also 77 petty fires, 28 in the Town, on the River and in the Docks, 44 in the suburbs, and 5 in Howrah.

Twelve of the total number of fires occurred in buildings licensed under the Licensed Warehouse and Fire Brigade Act, I of 1893.

DESCRIPTION OF FIRE.	Number of fires.	Number of fires attended by Fire-Brigade.	Number of fires extinguished by neighbours or residents.	By Dock and Mill fire engines and appliances.	REMARKS.
Fires at which property destroyed, valued at Rs. 50 or more ...	71	44	21	6	
Fires at which property destroyed, valued at less than Rs. 50 ...	77	12	50	15	
GRAND TOTAL ...	148	56	71	21	

Serious Fires.

Number of fires extinguished by Fire Brigade		... ...	44
Ditto	Ditto	Dock or Mill appliances	1
Ditto	Ditto	by Fire Brigade assisted by Fire Float or Fire engines ...	5
Ditto	Ditto	by neighbours, occupiers, etc., ...	17
Ditto	Ditto	by neighbours before arrival of brigade	4
			71

Petty fires.

Seventy-seven petty fires occurred during the year, 28 in town, river and docks, 44 in suburbs and 5 in Howrah:—

50 were extinguished by neighbours or occupiers, etc.

12 were extinguished by fire brigade.

15 were partly extinguished before arrival of fire brigade by neighbours or occupiers.

—

77

—

The total estimated value of the property destroyed by fire was Rs. 12,15,521-13-6 against Rs. 20,74,993-6, the value of the property destroyed by fire in 1906-07.

Fires outside the jurisdiction of the Fire Brigade.

28th November 1907.—A large jute fire occurred at the Aratoon Jute mill, Dakindary Road, Dum Dum, in which a two-storied building containing jute and machinery to the value of Rs. 55,000 was destroyed. The property was insured.

The most serious fires were as follows: —

1. *September 30th.*—I. G. S. and Railway Co.'s godowns, Strand Bank Road, Jute and Seeds, Rs. 30,000. Fire lasted 3½ hours.

2. *November 5th.*—Shops and godowns, Harrison Road, imported cloth and dried fruits, Rs. 71,700. Fire lasted 1¾ hours.

3. *November 28th.*—Arathoon Jute Press, in 24-Parganas, Jute, Machinery and buildings, Rs. 55,000. Fire lasted 13 hours 20 minutes.

4. *December 17th.*—Union Jute Press, 10 Nawab Putti Road, Chitpur, jute and buildings, Rs. 2,40 000. Fire lasted 27 hours, 25 minutes. But a hand engine stood-by until 11-10 A. M, 30th December 1907 whilst the jute was being salvaged.

5. *December 18th*—Jute godown, Canal West Road, jute, pucca and kutcha buildings Rs. 2,00,000. Fire lasted 4 days and 20½ hours. But a manual stood-by for 3 days whilst the jute was being salvaged.

6. *December 24th.*—Goosery Cotton Mills, Howrah, cotton and buildings, Rs. 1,50,000. Fire lasted 5 hours.

7. *January 16th.*—Jute sheds, Belgatchia Road, jute, corrugated iron sheds and tiled huts, Rs. 20,000. Fire lasted 13 hours.

8. *February 13th.*—Jute sheds, Belgatchia Road, jute, corrugated iron sheds and tiled huts, Rs. 22,000. Fire lasted 10 hours.

9. *February 22nd.*—A flat on the river, Juggernath ghât, Hâtkhola, jute and cotton, Rs. 60,000. Fire lasted 2½ hours.

10. *March 4th.*—Shops and godowns, Khengraputti, Bara Bazar, scissors, knives, locks, beads, enamelware and buildings, Rs. 53,050. Fire lasted 4 hours.

11. *March 5th.*—Flour mill, Upper Circular Road, buildings, machinery, wheat and flour, Rs. 2,00,000. Fire lasted 5½ hours.

12. *March 11th.*—Two godowns, Goosery, Howrah, linseed cake, linseed oil and machinery, Rs. 25,000. Fire lasted 6½ hours.

13. *March 21st.*—Jute godowns, New Canal Road, 'C' suburbs, jute, a corrugated iron shed, Rs. 20,000. Fire lasted 8½ hours.

5. *Repairs*—The Fire Engine "Rupnarain" was thoroughly overhauled at the Government Dockyard, during the year under review and the Fire-Engine "Bengal" was sent for a similar overhauling on the return of the "Rupnarain".

A dockyard strike during the months of February and March considerably delayed the latter's repairs.

6. Two turnouts consisting of two fire-engines, two hose-carts, two brakes ten horses and all necessary hose and gear are always kept in readiness at Headquarters in case of a call.

7. *Payments by Municipalities.*—In the year uuder report the percentages fixed by Government as payable by the several Municipalities concerned, were as follows:—

	Area in sq. miles.	Percentage.	Contribution for 1907-08.
			Rs.
City of Calcutta ...	20·267	70%	70,764
Chitpore	3	15%	15,164
Howrah	9	11%	11,120
Garden Reach ...	3	2½%	2,528
Manicktolla	3	1½%	1,516
Total ...	38·267	100%	Rs. 1,01,092

8. *Calls on the Fire-Brigade.*—

9. *Prosecutions, etc.*—Four licenses were granted under section 36, Act I of 1893, for letting off fire-works, rockets, etc. None of them were suspended under section 37 of the Act during the year. Seven persons were arrested, of whom five were convicted and fined, for letting off fire-works under section 66, Act IV of 1866, one for selling fire-works without license, section 36, Act I, 1893, and one case was struck off.

Two prosecutions were instituted under Act IV of 1884 for possessing fire-works for sale. The accused were convicted and fined. Two licenses for the sale of fire-works were cancelled during the year.

10. *Water supply*—The water used by the Brigade is obtained from the street mains, wherever the unfiltered water supply has been extended. It is however necessary, as soon as the Brigade leaves the station, for the Pumping Station to be rung up on the telephone and a request made to put on pressure.

Where there are no street mains available, water is obtained from any tank, and in some cases, when the tide allows, from the river Hughli direct.

In Howrah the supply of water from tanks is very scanty and is getting less and less every year, there is no other source of supply except from the river Hughli.

Howrah, Chitpur, Garden Reach, and a portion of the added area are not supplied with unfiltered water.

The East Indian Railway goods sheds have a supply of water of their own for the protection of their goods sheds. They also keep 2 manual engines and a supply of hose and a staff of men to work their appliances.

They are also arranging for "Sprinklers" and electric pumps for the new three-storied godowns lately erected on the river front.

They also intend to put instantaneous instead of screw couplings wherever necessary, in order to bring their appliances into line with the Calcutta Fire Brigade.

11. *Telephones and Fire alarms.*—At the Head quarters Lal Bazar there is a telephone exchange with 55 connections (and space for 45 more) to all Police Stations.

Communication can also be obtained through the Head Telephone office and Government Telegraph Office with any subscriber on the General Telephone Exchanges.

The direct communication from Head-quarters is principally with Thanas and Pumping Stations and also to the Fire-Float stationed off Fort Point.

The East Indian Railway goods sheds are in direct telephonic communication with Howrah Fire station and also have a direct Fire alarm (the only one in Calcutta) to the Howrah Fire Station. Besides the telephone, for the purpose of reporting fires there are lookouts at all Fire Stations where steam or manual engines are kept.

At Head-quarters and Howrah, Tell-tale clocks have lately been introduced on the Look-out Towers and have proved a useful check.

The Port Commissioners and the Jute Association have been approached on the subject of introducing street fire alarms, and the suggestion has also been thrown out that the Mills and Press Houses within the area served by the Calcutta Fire Brigade should be connected with the Fire stations by a direct telephone system and alarm bells. At present the only connection most of the Mills have is a private wire to their own offices. This is far from satisfactory, as much valuable time may be lost before the Brigade is even advised of a fire having broken out. A delay of even a few minutes may mean a considerable loss of valuable property.

New Fire Appliances.—Sanction has been applied for to allot funds in the coming year's Budget to enable the Brigade to purchase a 65-foot combined Water-Tower and Fire-Escape. Although the majority of buildings in Calcutta are so built that escape from them on the outbreak of a fire, is easy, still a large number of very tall structures are being put up in Calcutta, for instance Chowringhee Mansions and the New Chartered Bank in Clive Street, where an escape might be necessary.

Water-Tower and Escape.

But the principal use to which it is intended to put this Water-Tower will be, at large Jute and Cotton Fires when the walls are in an unsafe condition and it is not possible to pump water direct on to the fire turn them.

By means of the Tower, a stream of water can be driven right into the heart of the flames.

Ladder.

A "Pompier" Ladder was during the year obtained from England and has already proved itself useful.

Lamps.

13. At the Aratoon Jute Mills fire, the Brigade had to drive some 7 miles from Head-quarters, and a portion of that distance was through the badly lighted Suburban roads and lanes.

In consequence, a pair of Acetylene head lights were purchased and have proved a great success, not only in Suburban lanes, but on foggy nights during the cold weather, in the town.

Two Acetylene hand lamps have been purchased. They have proved greatly superior to the old-fashioned oil lamps, which have hitherto been used when moving about at a fire.

The Port Commissioners' Fire Float materially assisted the Brigade on several occasions, by pumping water for the Engine from the River. On one occasion the Port Commissioner's Fire Engine stationed at the Port Commissioners' Docks came up to Chitpur to assist at a Jute Fire, but as the river was too distant, she was unfortunately unable to render help. This Engine should be supplied with a portable tank so that she can work at a distance, from the River or Docks with the assistance of the Fire Float.

Buckets.

Collapsible canvas buckets (German Army Pattern) have been substituted for galvanised iron. This is a great saving in weight as well as space.

These are principally used for carrying feed water to the boiler of the engine at fires. The Calcutta unfiltered water has so much dirt in it, that it is practically impossible to use it for the engine boilers. Clean water has to be frequently carried considerable distances. The Calcutta Corporation are unable to supply the Calcutta Fire Brigade with filtered water, when the supply is interrupted, as it usually is at night, when fires are most prevalent. The continuous supply of filtered water will, when universally introduced, considerably benefit the Brigade as well as the public.

Portable telephones.

Enquiries are being made as to the practicability of purchasing a portable telephone to communicate between the engine and firemen who often work at a considerable distance from the fire-engine.

It would also be most useful in communicating with Head-quarters by means of an attachment to over-head telephone wires.

Tourniquets.

Twenty-five Tourniquets or hose clamps of an instantaneous pattern were purchased during the year. They are exceedingly handy and easily and quickly fixed in case of a leak in the hose.

14. *Calls.*—Calls to the number of 148 were recorded during the year, being an increase of 28 over the previous year. The above figures include 7 River fires attended by the Brigade assisted by the Port Commissioners' Fire Floats. The distance travelled to and from fires by the Brigade was 326·5 miles. Eighty three fires were attended by the Brigade during the year. The average distance travelled per fire was 3·93 miles. Five horses died or were destroyed (under medical certificate) during the year.

15. *Fatality.*—The only fatality during the year was in the case of one Binda Bewah, an old woman, aged 90 years, who was burnt to death in a golepatta hut, in which she was sleeping at 5 A.M. on 15th January 1908.

16. *Miscellaneous.*—There is a forge attached to the Brigade which does most useful work not only in shoeing the horses, but in making up a great deal of iron work.

Chief Engineer J. Holmes was granted combined leave for 23 months on August 30th, 1907.

Mr. J. G. Fulthorpe was appointed Chief Engineer in his place and took over charge from him on the 1st September 1907.

17. *Conference.*—The Port Commissioners, Jute Mills Association, Calcutta Fire Insurance Agents Association and Calcutta Fire-Brigade met in conference to consider the question of introducing a universal standard of hose (both in quality and size) and connections during the year under review.

The question of Fire Alarms was also considered. A final settlement had however not been arrived at before the close of the period under report.

I have the honour to be,

SIR,

Your most obedient servant,

F. L. HALLIDAY,

Commissioner of Police.

This force is augmented by a permanent stand-by of 12 European Police Sergeants in two shifts.

These men are paid Rs. 5 per each fire they attend.

Hose reels with 350 feet of hose and necessary gear are posted at Fenwick Bazar, Talltolla, Sukea Street, Jorabagan, Kumartuli, Burtolla, Ballyganj, Muchipara and Alipur Thanas. These reels are used by the local police in case of fire, but can only work during the hours when water pressure is on; the supply being interrupted.

It is proposed to place another hose reel this year at Ekbalpur Thana, as the unfiltered water is now extended to that jurisdiction.

CALCUTTA,
The 30th July 1908.

F. L. HALLIDAY,
Commissioner of Police.

CALCUTTA,

The 30th July 1908.

F. L. HALLIDAY,

Commissioner of Police, Calcutta.

APPENDIX III.

Memorandum of fires in the Town and Suburbs of Calcutta and in Howrah from 1st April 1907 to 31st March 1908.

Number.	Date.	Locality with Section letter.	Duration of fire.	Approximate value of property destroyed.	Remarks showing nature of damages done, etc.
1	2	3	4	5	6
		Town and Port Police.			
	1907.			Rs. A.	
1	April 2nd ...	Hart Brothers Hospital Lane, J. Town.	1 hour and 20 minutes.	150 0	A godown containing hay. Not insured.
2	" 6th ...	India General Steam Navigation Company Flat "Teesta", 1st Dn., Port Police.	5 hours ...	5,000 0	Jute in kutcha bales and drums on board Indian General Steam Navigation Company's Flat "Teesta" damaged by fire and water. Insured.
3	" 7th ...	Posta bagan, E. Town.	½ hour ...	100 0	A tiled hut containing a quantity of waste paper. Not insured.
4	May 8th ...	No. 13, Bonfield's Lane, G. Town.	½ hour ...	86 0	Four barrels of coal tar. Insured and licensed under the Jute Warehouse and Fire Brigade Act I of 1893.
5	" 17th ...	Bow Street, J. Town.	6 hours and 20 minutes.	5,000 0	Thirteen tiled huts containing personal effects, clothes, furniture, etc. Not insured.
6	June 23rd ...	No. 7, Upper Chitpur Road, F. Town.	1 hour and 50 minutes.	5,000 0	Three rooms on the ground floor of No. 7, Upper Chitpur Road containing Fire works and Opium. Licensed to sell Fire-works.
7	Sept. 17th ...	No. 79, Lower Chitpur Road, H. Town.	1 hour and 5 minutes.	50 0	A tiled hut containing some old clothes Not insured.
8	" 18th ...	No. 67, Strand Road, E. Town.	2 hours and 35 minutes.	3,000 0	A stock of timber and a corrugated iron hut with bamboo walls containing one almirah, one taktapost and Rs. 1,000 in currency notes, and personal effects. Not insured. Licensed under the Licensed Warehouse and Fire Brigade. Act I of 1893.
9	" 28th ...	Ram Mohan Ghose's Lane, H. Town.	4½ hours	150 0	Some bags of leather clippings. The godown in which stored was also slightly damaged by fire and water. Not insured.
10	" 29th ...	No. 11, shed P. C. Docks, Kidderpore, 3rd Dn., Port Police.	5 minutes.	200 0	Six bales of jute were slightly burnt. Not insured.
11	" 30th ...	No. 67, Strand Road, India General Steam Navigation Company godown, E. Town.	3½ hours	30,000 0	3,000 maunds of jute, 300 to 600 maunds of seeds damaged partly by fire and water. Insured and licensed under the Licensed Warehouse and Fire Brigade Act I of 1893.
12	Oct. 2nd ...	No. 97, Lower Chitpur Road, G. Town.	1½ hours ...	50 0	Some baskets, mats and ropes which were stored on the ground floor in a pucca godown. Not insured.
13	" 29th ...	3rd Division Port Police	14 hours ...	16,000 0	Eight boats laden with straw. Not insured.
14	Nov. 4th ...	Goabagan Lane C. Town.	1½ hours ...	50 0	About 10 drums of jute partially burnt. Not insured.
15	" 5th ...	No. 162 Harrison Road, G. Town.	1¾ hours	71,700 0	A portion of a pucca building containing cloth and dried fruits; some of the property was insured.
16	" 21st ...	No. 16 Manick Bose's Ghat Street, B. Town.	4½ hours ...	5,278 0	A tiled hut containing jute in kutcha bales and some tobacco. Not insured.
17	" 23rd ...	No. 5-1 Govind Chand Dhar's Lane, G. Town.	½ hour ...	200 0	Some bags of spices. Not insured.
18	" 25th ...	Upper Chitpur Road, B. Town.	20 minutes ...	100 0	A cart load of jute. Not insured.
19	Dec. 3rd ...	Ooma Charn Dass Lane, M. Town.	40 minutes ...	150 0	Two tiled huts and a third, partly burnt. Not insured.
20	7th ...	Baniatollah Street, B. Town.	3 hours and 50 minutes.	800 0	A pucca godown containing jute in kutcha bales, partly destroyed by fire and water. Not insured.
21	" 21st ...	Gulu Ostagar Lane, C. Town.	3½ hours	300 0	Two tiled huts consisting of 16 rooms. Not insured.
	1908.				
22	Jan. 8th ...	3rd Division Port Police.	1 hour ...	1,200 0	A cargo boat containing 300 bales of jute. Insured.
23	" 10th ...	12 Bedford Lane, O. Town.	2¾ hours	1,000 0	A soorki mill which was made of corrugated iron roof with mats walls and partly tiled hut. Not insured.

Number.	Date.	Locality with Section letter.	Duration of fire.	Approximate value of property destroyed.	Remarks showing nature of damages done, etc.
1	2	3	4	5	6
	1908.			Rs. A.	
24	January 11th ...	7 Bonfield's Lane, G. Town.	½ hour ...	1,000 0	Some chemicals and a portion of a pucca building damaged. Insured.
25	" 17th ...	3rd Division Port Police, river Hughli, off Howrah Jute Mill.	1 hour and 25 minutes.	5,600 0	A cargo boat containing 125 kutcha bales of jute. Insured.
26	" 19th ...	86-6 Wellesly Street N. Town.	1¾ hours	350 0	A Godown containing 70 cases of kerosine oil. Not insured.
27	" 20th ...	Baghbazar Straw Ghat, 1st Division Port Police.	2¾ hours	2,100 0	A boat laden with 18 kahans of straw. Not insured.
28	" 23rd ...	161, Upper Chitpur Road A. Town.	1¾ hours	1,000 0	Three tiled huts containing paint, turpentine, varnish, etc. Not insured.
29	February 14th...	51 Bysack Dighi Lane, F. Town.	½ hour ...	50 0	Some bedding and a portion of a room in a thatched hut. Not insured.
30	" 22nd ...	R. S. N. Cos. Flat "Chitra" 1st Division Port Police.	21½ hours ...	60,000 0	Drums and bales of jute and cotton in a flat. Insured.
31	March 3rd ...	4, Wellesley Square, N. Town.	1½ hours	400 0	A tiled hut containing 9 rooms and some household effects. Not insured.
32	" 4th ...	37, Khangraputty Street, G. Town.	4 hours ...	53,050 0	A pucca two storied house containing miscellaneous articles, consisting of scissors, knives, needles, enamelled ware, wood, glass, beads, silk and cloth.
33	" 5th ...	242-1, Upper Circular Road, C. Town.	5½ hours ..	2,00,000 0	Four corrugated iron godowns and one pucca building containing flour and machinery. Not insured.
34	" 6th ...	Budge Budge, 3rd Division Port Police.	1 hour .	1,600 0	A wooden cargo boat. Not insured.
35	" 14th ...	12 Roop Chand Roy's Street, G. Town.	25 minutes ..	500 0	Wearing apparel and Government Currency Notes. Not insured.
36	" 28th ...	1st Division Port Police	1 hour ...	300 0	An empty country boat. Not insured.
	1907.		SUBURBS.		
1	April 1st ...	Kasaibustee Lane, E. Suburbs.	4 hours ...	150 0	One tiled hut consisting of 3 rooms and two tiled huts partly destroyed. Not insured.
2	" 23rd ...	Napit Bagan, E. Suburbs	1½ hours ...	1,000 0	Eight goleputta and tiled huts and some household effects. Not insured.
3	" 25th ...	Palmers Bridge, F. Suburbs.	1½ hours ...	50 0	Four goleputta huts. Not insured.
4	" 29th ...	Sowdagar putty, B. Suburbs.	1 hour and 20 minutes.	100 0	About 4 cart loads of jute sweepings in a tiled hut. Not insured.
5	Aug. 28th ...	Tallygungo J. Suburbs	½ hour .	100 0	Woolen roof and doors of a pucca house burnt. Not insured.
6	Oct. 10th ...	2-40, Gas Street E. Suburbs.	3½ hours ...	700 0	A portion of a two-storied corrugated iron roofed hut containing some papers, jute sticks and bamboo tubes wrapped with jute and fire works composition. Not insured.
7	" 12th ...	223 Upper Chitpore Road, B. Suburbs.	½ hour ...	450 0	A private four-wheeled carriage. Not insured.
8	" 31st .	Rajabagan F. Suburbs	¾ hour ...	50 0	A portion of a tiled hut and some straw. Not insured.
9	Nov. 2nd .	70 Narcoldangah North Road, E. Suburbs.	3½ hours ...	100 0	A stack of straw and a portion of a tiled hut. Not insured.
10	" 24th ..	Sutaputty, J. Suburbs.	8 hours ...	200 0	A stack of straw. Not insured.
11	" 24th ..	Choonaputty, F. Suburbs	2 hours ...	1,500 0	A tiled hut containing about 350 maunds of taiaputta (spice leaves) and an adjoining tiled hut. Not insured.
12	Dec. 4th ...	Raja Rajendra Lall Mitter's Road, E. Suburbs.	2 hours .	200 0	Three goleputta huts burnt. Not insured.
13	" 17th	Union Jute Press, Nawabputty Road B. Suburbs.	27 hours and 25 minutes.	2,40,000 0	A large double-storied godown containing 6,000 bales and about 1,500 maunds loose jute. Insured and licensed under the Jute Warehouse and Fire Brigade Act I of 1893.
14	" 18th ...	41 Canal West Road, C. Suburbs.	4 days and 20½ hours.	2,00,000 0	Three corrugated-iron godowns and one pucca godown containing jute in drums. Insured and licensed under the Licensed Warehouse and Fire Brigade Act I of 1893.
15	" 29th ..	23/1 Joynagore Road, G. Suburbs.	½ hour. ...	300 0	A portion of a tiled hut and some sola hats. Not insured.

CALCUTTA, }
The 30th July 1908. }

F. L. HALLIDAY,
Commissioner of Police.

ANNUAL REPORT FOR 1907-08 UNDER THE LICENSED WAREHOUSE AND FIRE-BRIGADE ACT I OF 1893, AS AMENDED BY ACT I OF 1894.

Dated Howrah, the 16th June 1908.

From—A. W. Cook, Esq., Chairman of the Howrah Municipality,
To—The Magistrate of Howrah.

I have the honour to report that 309 warehouses were licensed in 1907-08 out of 347 registered during that year, against 314 out of 366 registered in 1906-07; the details are as follows:—

Year.		Jute.	Cotton.	Hay.	Straw.	Wood.	Resin.	Waste paper.	Varnish.	Total.
Registered	1906-07 ...	42	39	1	42	238	1	3	...	366
	1907-08 ...	43	41	1	33	223	1	3	2	347
Licensed	1906-07 ...	35	30	1	34	211	1	2	...	314
	1907-08 ...	38	28	1	29	209	1	1	2	309

2. The income from license-fees during the year under report amounted to Rs. 6,977, of which Re. 1-8 were collected on account of arrears and Rs. 57 were due to a few extra items of demand on account of the year 1906-07, but realised in 1907-08.

3. The demand, collection, remission and balance for 1907-08 are shewn in Appendix A, and the details of licenses granted in this year to jute and cotton warehouses are entered in Appendix B. Owing to the comparative unimportance of the 243 licenses granted for the storage of straw, wood, hay, resin, waste paper and varnish in 1907-08 against 249 in the previous year, they have not been entered in Appendix B, and it may be noted that such license-fees have only been levied under the Fire-brigade Act since July 1893, prior to which they were levied under section 261 of the Bengal Municipal Act.

4. The decrease in collection is due to the reduction of rates—*vide* Resolution of the Commissioners passed at a meeting held on 27th April 1907 on account of the reduced demand of the Commissioner of Police, Calcutta, for Fire-brigade establishment and also on account of the Commissioners undertaking to meet half that demand from General Revenues under section 10 of the Licensed Warehouse and Fire-brigade Act.

5. There were 60 prosecutions in the year under review, which realized Rs. 164 against 36 in the previous year, which produced Rs. 126.

6. The expenditure incurred in assessing and collecting license-fees amounted to Rs. 1,025, as detailed below:—

	Rs.
Salary of General Supervisor and Assessor ...	600
Ditto Inspector	180
Commission of Inspector	125
Salary of clerk	60
Ditto peon	51
Contingencies	9
Total ...	1,025

7. The Fire brigade establishment continued under the control of the Commissioner of Police, Calcutta. The Fire-brigade station in Howrah stands in a very central position north of the Municipal market, and from a wooden stage raised over it the whole town is overlooked. There were eleven fires during the year, the details of which are given in Appendix C. Besides these

there were five other petty fires: the brigade turned out to all of these fires and extinguished them, except one which was extinguished by neighbours before the arrival of the brigade. The eleven large fires above mentioned were all extinguished by the Fire-brigade.

8. The Commissioner of Police demanded Rs. 8,884 for the maintenance of the Fire-brigade in 1907-08, and this amount was remitted to him during the year.

APPENDIX A.

Statement shewing the demand, collection, remission and balance in Howrah on account of contributions for the Fire-brigade during the official year 1907-08.

			...	1,92,000	

In addition to the above fires, five other petty fires occurred. The Brigade turned out to all these fires and extinguished them, except one which was extinguished by neighbours before the arrival of the Brigade. The eleven large fires above mentioned were all extinguished by the Fire-brigade.

CALCUTTA,
The 8th June 1908.

GRAHAM HAULTAIN,
Superintendent, Fire-Brigade.

No. 54J., dated Calcutta, the 30th June 1908.

From—The Hon'ble Sir Charles Allen, Kt., i.c.s., Chairman of the Corporation of Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I have the honour to submit the following report under section 41 of Act I (B.C.) of 1893 for the year 1907-08.

2. The amount to be realised by fees during the year was Rs. 28,266 as against Rs. 34,368 in the year 1906-07. The rate for calculating the fees under section 10 was in consequence reduced from 8½ to 6½ per cent. on the annual valuation of warehouses.

3. The work of assessment under the Act was done, as heretofore, by the general assessing staff of the License Department.

4. During the year 132 licenses were granted and 18 refused. In 1906-07 the figures were 132 granted and 15 refused. The following statement gives the result of applications for license :—

Applications pending since last year.	Applications received during the year.	Total.	Nature of application.	Number sanctioned.	Number refused.	Number pending.
1	24	25	Jute ...	14	10	1
...	129	129	Wood, etc.	118	8	3
1	153	154	...	132	18	4

5. During the year under report one license was issued for 1904-05, two for 1905-06, 35 for 1906-07 and 765 for 1907-08. The following is a statement of the aggregate amount of receipts :—

			Rs.	A.	P.
License fee for 1904-05	...	...	116	0	0
Ditto for 1905-06	...	...	98	8	0
Ditto for 1906-07	...	...	2,232	8	0
Ditto for 1907-08	...	...	30,469	8	0
Mutation fee	...	...	15	0	0
Fines, etc.	...	...	1,373	0	0
Total		...	34,304	8	0

6. Of 744 licenses for warehouses issued in 1906-07, 656 were renewed, 46 were cancelled as the premises were reported vacant or not assessable under the Act, while the fees in respect of 42 remained unrealised at the close of the year.

7. The following statement shows the receipts and disbursements of the licensed Warehouse Fund during the year 1907-08 :—

Abstract account of the Licensed Warehouse Fund for the year 1907-08.

Receipts.	Amount.	Total.	Expenditure.	Amount.	Total.
	Rs. A. P.	Rs. A. P.		Rs. A. P.	Rs. A. P.
To balance on the 1st April 1907.	......	6,919 6 9			
Fees and licenses	32,916 8 0		By Assessing and Collecting Establishment.	3,000 0 0	
Fines	1,373 0 0				
Miscellaneous ...	15 0 0		Contribution to the Fire-brigrade.	56,632 0 0	59,632 0 0
Contribution from Corporation Revenue.	28,266 0 0		Balance on 31st March 1908.	......	12,957 14 9
Ditto from Government.	3,000 0 0	65,570 8 0			
		72,489 14 9			72,489 14 9

8. The list of jute and other than jute warehouses licensed during the year 1907-08 is hereto appended.

List of Warehouses other than Jute Licensed in 1907-08.

RESOLUTION ON THE SECOND ANNUAL REPORT OF THE BENGAL SMOKE NUISANCES COMMISSION FOR THE YEAR 1907-08.

No. 2830Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 14th September 1908.

RESOLUTION.

READ—

Letter No. 66, dated the 3rd September 1908, from the Secretary to the Bengal Smoke-nuisances Commission.

Read also—

The second Annual Report of the Commission for the year 1907-08.

Observations, warnings and Prosecutions.

During the year under review the Chief Inspector and the Assistant Inspector of Smoke-nuisances made 3,900 observations of smoke emitted from chimneys, and over 2,400 inspections of furnaces. The appliances for stoking were tested in 71 cases, and mechanical stokers and smoke-preventing appliances were fitted to 91 furnaces. Statutory warnings were served on the owners of mill-factories in 74 cases. Prosecutions were instituted in three cases, in all of which a conviction was obtained.

Reduction of smoke in Calcutta and Howrah.

2. In Calcutta and Howrah there was an average emission of dense black smoke for 2·5 minutes in the hour in March 1908, against 3·28 minutes in the hour in April 1907 and 13 minutes in the hour in April 1906, when the work of the Commission was first commenced. This result is satisfactory. Gas and electric motive power supplied from street mains are being introduced into a few factories in place of steam-power so as to avoid smoke.

Complaints.

3. The Commission received during the year 15 written complaints, all of which were attended to promptly. Formerly considerable difficulty was experienced in getting the chimneys of mill factories raised, but this difficulty is likely to diminish, as owners realise that a better draught, easier steam, and smaller consumption of fuel are obtained by so doing. The Lieutenant-Governor recognizes with pleasure the assistance afforded to the Commission by factory owners and those in charge of furnaces in trying to prevent smoke.

4. The thanks of the Lieutenant-Governor are due to the President and other members of the Commission, and particularly to the non-official members who have willingly given their time and services to its work.

ORDER—Ordered that a copy of the Resolution be forwarded to the Government of India, Department of Commerce and Industry; the President of the Smoke-nuisances Commission; the Commissioners of the Presidency and Burdwan Divisions; the Commissioner of Police, Calcutta; the Secretary, Bengal Chamber of Commerce; the Secretary, Calcutta Trades' Association; and the Secretary, Bengal National Chamber of Commerce.

Ordered, also, that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary.

RESOLUTION ON THE ANNUAL REPORT OF THE CIVIL VETERINARY DEPARTMENT, BENGAL, AND OF THE BENGAL VETERINARY COLLEGE FOR THE YEAR 1907-08.

REVENUE DEPARTMENT—AGRICULTURE.

Calcutta, the 11th September 1908.

RESOLUTION—No. 3963Agri.

READ—

The Annual Report of the Civil Veterinary Department, Bengal, and of the Bengal Veterinary College for the year 1907-08.

Lieutenant-Colonel Raymond, F.R.C.V.S., held combined charge of the Bengal Veterinary College and the Provincial Civil Veterinary Department throughout the year. He was assisted by Mr. Harris, who joined his appointment as Superintendent, Civil Veterinary Department, Eastern Bengal and Assam, on 28th May 1907, and by Mr. D. Quinlan, the present Superintendent of the Civil Veterinary Department, Bengal.

2. *The Bengal Veterinary College.*—The popularity of the Bengal Veterinary College has increased considerably. There were 151 students on the roll during the year, compared with 104 in the previous year, of whom 60 came from Eastern Bengal and Assam and 12 from Burma, Madras, the United Provinces and the Punjab. That the students have been able to appreciate the instruction is proved by the report of the Board of Examiners, which shows that 82, 90 and 88 per cent. of the students passed in the first, second and third years, respectively. The Institution itself has grown rapidly, and during the year the new hostel to accommodate 156 students, the *post-mortem* room, and quarters for the Assistant Surgeon and the Overseers were completed. Lieutenant-Colonel Raymond has been able to do much scientific work in the new bacteriological laboratory, and in addition to ordinary research he has made important investigations in connection with rabies cases and the Glanders and Farcy Act. It is unfortunate that the completion of the buildings has been retarded this year through want of funds. Lieutenant-Colonel Raymond has now organised the administration of the Glanders and Farcy Act in Calcutta. The area has been divided into six districts, each in charge of a Veterinary Inspector. No animal has been destroyed except after personal examination by Lieutenant-Colonel Raymond, whose administration of the Act has been most tactful.

3. *The Veterinary Infirmary, Belgachia.*—The popularity of the Infirmary has increased, and the number of cases treated was 4,132 as compared with 3,095 in 1906-07. It is satisfactory to note also that the number of out-door patients has increased nearly 100 per cent.

4. *Veterinary Hospitals and Dispensaries.*—There are now 25 Veterinary dispensaries in Bengal. One dispensary at Arrah was opened during the year, and dispensaries at Chapra and Bhagalpur have been completed since the end of the year. The latter, on which over Rs. 10,000 have been spent, was due to the liberality of Babu Ramani Mohan Singh. The Lieutenant-Governor would draw the attention of the Superintendent to last year's Resolution and again ask him to record more fully his opinion about the working of the several institutions during the year and the causes of their comparative success or failure. During the present year there has been a very large increase in the cases treated at Hooghly, the 24-Parganas, Nadia, Jessore, Darjeeling, Bhagalpur, Angul, Puri and Ranchi, and a large decrease in Darbhanga, Monghyr, and Hazaribagh. The causes of these fluctuations should be ascertained by the Superintendent, and in the case of the Sonthal Parganas, an explanation of the remarkable increase should be submitted to Government. The total number of patients rose during the year from 32,736 to 61,557. The number of horses treated during the year was 10,430 (which is almost the same as last year), but the number of cattle treated has increased from 18,525 to 49,458.

5. *Diseases.*—The information given in Table II of the number of deaths from contagious diseases is founded upon the reports of chaukidars, checked in a few cases only by the Veterinary staff. The results at present obtained in this way are not reliable, and in the particular case of the 24-Parganas are so obviously incorrect that the Superintendent will be asked to submit a special report on them. Leaving the figures of that district out of account the number of deaths from contagious diseases was 10,557 compared with 21,025 last year. There were 259 cases of death from glanders, of which 249 were detected in Calcutta. It is observed that there has been a large decrease in the number of cattle inoculated for rinderpest from 22,613 to 5,978. The reasons for this considerable falling-off should be reported to the Lieutenant-Governor, who attaches the greatest importance to this branch of the Superintendent's work. The percentage of fatal cases was only ·33.

6. *Breeding Operations.*—The Lieutenant-Governor is pleased to see that some progress has been made in the improvement of the breed of cattle, and that steps are being taken to protect the Bramhani breeding bulls in the districts. There are now three herds of cattle at Sripur, Pusa and Kalimpong respectively, and in time it will be possible to supply good bulls to the surrounding villages.

7. *Fairs and Shows.*—There were 13 fairs and shows held during the year, and all but two were attended by officers of the Department.

8. *General.*—During the year the scheme for the reorganisation of the Civil Veterinary Department received the final sanction of the Secretary of State and the service has been made pensionable. According to this scheme there will ultimately be two Veterinary Assistants in every subdivision in the Province with a superior staff consisting of 30 Inspectors and 9 Deputy Superintendents. The scheme will be brought into force gradually as funds permit. The separation of the Civil Veterinary Department from the administration of the Bengal Veterinary College was sanctioned during the year and took effect from the 1st of April 1908. Mr. D. Quinlan, who was under training with Lieutenant-Colonel Raymond, has been appointed Superintendent of the Civil Veterinary Department, while Lieutenant-Colonel Raymond takes charge of the Bengal Veterinary College and the administration of the Glanders and Farcy Act in Calcutta. The first Imperial Veterinary Conference was held at Calcutta in February 1908 when the members visited the Bengal Veterinary College.

9. The Lieutenant-Governor desires to acknowledge the uniformly excellent character of Lieutenant-Colonel Raymond's work, and he endorses the opinion expressed by him of the good work done by Mr. D. Quinlan, I.C.V.D., and Mr. E. H. Brand, the Assistant Principal of the College.

By order of the Lieutenant-Governor of Bengal,

F. W. DUKE,

Offg. Chief Secy. to the Govt. of Bengal.

WEATHER AND CROP REPORT.

For the week ending the 14th September 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	5·42	7½	7½	Rainfall at Kalna 2·69, at Katwa 4·99 and at Raniganj 3·26 inches. Weather hot and cloudy with occasional showers. Harvesting of *aus* paddy and jute continuing. Weeding of *aman* paddy going on. Prospects of jute and sugarcane fair and that of winter rice good. Stocks of food-grains sufficient. Fodder and water sufficient. Three cases of cattle-disease reported from thana Jamalpur. 436 persons receiving gratuitous relief in Katwa.
2	BIRBHUM ...	0·27	7½	7½	Rainfall at Rampur Hât 3.39 inches. Weather seasonable. Weeding going on. Fodder and water sufficient. Common rice selling at 7¾ seers per rupee at Rampur Hât.
3	BANKURA ...	2·83	7¾	7½	Rainfall at Vishnupur 4·44 inches. Weather seasonable. *Aus* paddy ripening in places. Prospects of winter rice good. Persons gratuitously relieved—men 223, women 664 and children 208—total 1,095. People attending 6 test works—481 men, 328 women and 25 children—total 834—on the 11th September. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 6 to 7½ seers per rupee in the affected tracts.
4	MIDNAPORE ...	0·91	6	6	Rainfall at Contai 5·59, at Tamluk 1·77 and at Ghatal 2·02 inches. Transplantation of winter rice finished. Harvesting of autumn rice commenced. Early cotton being sown. Prospects of autumn rice and *bhadoi til* fair; that of jute and winter rice good.
5	HOOGHLY ...	1·96	6½	6½	Rainfall at Serampore 2·95 inches. Weather seasonable. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of jute and sugarcane fair. *Aus* and *aman* paddy doing well. Cutting of jute going on. No cattle-disease. Fodder and water sufficient. Arambagh report not received.
6	HOWRAH ...	2·02	6½	6½	Weather seasonable. Rainfall at Uluberia 2·46 inches. Transplantation of paddy completed in Sadar, but still going on in parts of Uluberia. Prospects of rice fair, but of jute not good. Harvesting of jute and *aus* paddy already begun in places. No cattle-disease. Fodder and water sufficient.
7	24-PARGANAS	2·35	6	6	Weather seasonable. Rainfall sufficient everywhere. Condition of jute fair. Paddy damaged by insects in Barasat. Insects disappeared from Basirhat. Damage done by excessive rain to crops in Magrahat, Fulta, Vishnupur and Jaynagar thanas. Common rice selling at 6½ seers per rupee at Barasat, 6½ seers at Basirhat and Barrackpore and 7 seers at Diamond Harbour.
8	NADIA ...	2·39	8*	6¾	Rainfall at Ranaghat 6·61, at Chuadanga 1·06, at Meherpur 2·82 and at Kushtia 2·87 inches. Harvesting of *aus* paddy and jute continuing. Prospects of standing crops fair; that of jute not good. Sowing of *kalai* and *rabi* crops begun in Meherpur. Price of common rice falling. Stocks of food-grains not sufficient. Situation improved. No further apprehension of famine. Condition of cattle fair. Fodder and water sufficient. Persons attending test works on 7th September—1,232 men and 12 women—total 1,244. No gratuitous relief given.

* New *aus* rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	8·99	7	7	Rainfall at Lalbagh 11·70, Kandi 4·77 and Jangipur 1·92 inches. Good rain received during the week. Harvesting of *aus* paddy progressing. Prospects of *aman* paddy favourable. Condition of jute and sugarcane fair except in the Kandi subdivision. No cattle-disease. Fodder and drinking water sufficient. 917 labourers employed on District Board test-works.
10	JESSORE ...	1·12	8*	8*	Rainfall at Jhenidah 1·43, at Magura 1·25, at Narail 1·47 and at Bangaon 5·35 inches. Weather seasonable. Rainfall general. More rain wanted. Harvesting of *aus* paddy and jute going on. Prospects of jute not favourable. Fodder and water sufficient. No cattle-disease. Condition of agricultural stock good. High prices continuing. 3,564 persons given gratuitous relief.
11	KHULNA ...	1·30	8	8	Rainfall at Bagerhat 1·24 and at Sathhira 4·12 inches. Weather seasonable. More rain wanted. Prices of staple food-crops almost stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy continuing. No apprehension of famine at present. Prospects of standing crops fair; that of jute not favourable. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	0·76	7 12†	7 12†	Weather hot and occasionally cloudy. Standing crops benefited by light showers, but heavy rain still needed for transplantation of paddy seedlings on unirrigated areas. Harvesting of *bhadoi* crops continuing. Sugarcane doing well. Prices almost stationary. Food-stocks being supplemented by importation from outside. No cattle-disease. Fodder and water-supply sufficient.
13	GAYA ...	1·27	8⅜* 11†	8¼* 9½†	Rainfall during the week almost general, but not sufficient. Weather showery at first—later in the week hot. Sugarcane doing well. Transplantation of *aghani* paddy still continuing in places. More rain wanted for it. Harvesting of *marua* and *makai* going on. Prices slightly fallen at the Sadar and the Aurangabad subdivisions. No cattle-disease. Fodder and water sufficient.
14	SHAHABAD ...	0·92	8	7¾ 10†	Rainfall at Bhabua 2·16, at Buxar 0·86, at Sasaram 0·81 and at Dehri 0·98 inches. Harvesting of *bhadoi* paddy in progress. Transplantation of paddy nearly completed, but more rain wanted. Standing crops doing well. Prices of food-grains stationary. Food-stocks below the normal, but sufficient if not exported. Agricultural stock in normal condition. Cattle-disease reported from Bikramganj thana. Fodder and water sufficient.
15	SARAN ...	0·96	8½ 12†	9 10½†	Rainfall at Siwan 7·03 and at Gopalganj 9·04 inches. Weather hot. Standing crops generally much benefited by the recent rain, but it was insufficient at Sadar. Prices of food-grains stationary. Scarcity apprehended in the northern half of the Sadar subdivision. Food-stock resources external. Agricultural stock in good condition. No cattle-disease. Fodder and water sufficient.

* Burma rice.
† The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee.		Character of the weather, and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
16	CHAMPARAN ...	0·46	7½ 10½*	7½ 10¼*	Rainfall at Bettiah 7·98 inches. Good rain reported from most parts of the district. Rainfall at the beginning of the week beneficial. Transplantation of winter paddy and harvesting of several crops going on. Condition of agricultural stock good. Fodder and water sufficient. Prospects of jute and sugarcane fair.
17	MUZAFFARPUR	2·04	8 11*	8 10¼*	Weather hot and sometimes cloudy. Rainfall at Sitamarhi 0·90 and at Hajipur 3·35 inches. Agricultural outlook greatly improved by recent rain, but more rain wanted. Transplantation of paddy continuing. *Marua* and *makai* being harvested at places. Prospects of jute fair. Condition of agricultural stock fair. Fodder and water sufficient. No cattle-disease. Common rice and *makai* selling at 7½ and 10 seers per rupee, respectively, at Hajipur and at 7½ and 12 seers a rupee at Sitamarhi.
18	DARBHANGA ...	3·61	7 11*	7 9¾*	Weather hot and at times cloudy. Agricultural prospects improved by rain, which was general during the week. *Bhadoi* crops benefited by the rainfall and transplantation of paddy resumed. More rain urgently wanted. Stocks of food-grains sufficient. Fodder and water available. No cattle-disease reported.
19	MONGHYR ...	1·90	6¾ 11*	6¾ 9½*	Weather hot and often cloudy. *Bhadoi* crops doing well. More rain wanted for transplantation of paddy. Prices of staple food-crops stationary. Price of *makai* fallen. No cattle-disease reported. Fodder and water sufficient.
20	BHAGALPUR ...	1·10	8 5/16 11⅜*	7⅜ 10⅛*	Rainfall at Banka 5·27, Midnapore 4·53 and Supaul 2·69 inches. Weather hot—sometimes cloudy. Much good done to standing crops and transplantation of paddy facilitated by the recent rain. But the rain least where most needed, *i.e.*, in the Sadar subdivision. More rain absolutely essential to prevent general failure. Harvesting of *marua* and *makai* going on. Condition of jute fair. Future prospects dependent on rain during the next week.
21	PURNEA ...	4·00	7	7	Rainfall at Kishenganj 4·26 and at Araria 7·93 inches. Weather hot. Harvesting of jute and *bhadoi* paddy in progress. Transplantation of *aghani* paddy begun in places owing to recent showers. Prospects of standing crops fair. Condition of jute fair. Stocks of food-grains and agricultural stock adequate. Cattle-disease reported from thanas Forbesganj and Raniganj. Common rice selling at 7 seers per rupee at Araria and at 6 seers at Kishanganj.

* The figures indicate the price of maize in seers per rupee.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers per rupee.		Character of the weather, and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
22	DARJEELING ...	Inches 3·21	7 11†	7 11†	Weather seasonable. Rainfall at Siliguri 7 47 inches. Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi dhan* being sown and harvested in some places. Winter rice and *bara marua* growing. Terai—Transplantation of winter rice nearly finished. Harvesting of *bhadoi* paddy and jute going on. Prospects of jute and other standing crops improved by the recent rain. Food-grains and agricultural stock sufficient.
23	SONTHAL PARGANAS.	3·35	8* 16½†	8* 10½†	Rainfall at Deoghur 4·32, Godda 2·56 Jamtara 1·70, Pakour 3·56 and Rajmahal 2·71 inches. More rain wanted in Godda and Rajmahal, where transplantation of paddy is still going on. Prospects of maize fair. Jute being cut and steeped. Stocks of food-grains likely to last till next harvest. Prices of staple food-grains falling. No immediate apprehension of scarcity. Burma rice selling at 8 seers a rupee at Deoghur and at 8½ seers at Jamtara and Pakaur.
24	CUTTACK ...	1·66	6⅞	6⅞	Rainfall general except at Kendrapara. *Biali* paddy and *mandia* being cut and harvested. *Saradh* paddy being transplanted. Sugarcane thriving. Condition of cattle generally good. Fodder and water sufficient. Agricultural operations resumed in flooded tracts, where crops have been damaged by floods in some villages. 695 men, 1,764 women and 3,615 children—total 6,074—given gratuitous relief. 40 men, 147 women and 165 children—total 352—on test-works.
25	BALASORE ...	1·04	8½	8	Weather seasonable. Rainfall at Bhadrak 3·54 inches. Transplanting and weeding of *saradh* paddy continuing. Harvesting of *bhadoi* paddy and jute commenced at places. Prospects of jute fair. Sugarcane and vegetables promising well. Winter rice entirely destroyed by floods, in low lands of thanas Dhamnagar, Chandbali and Baliapal, over 150 square miles. Stocks of food-grains sufficient. Scarcity existing in some parts of Basudebpur, Bhadrak, Jellasore, Baliapal, Chandbali, Dhamnagar and Basta thanas. Fodder and water sufficient, except in flood affected areas of Chandbali and Dhamnagar thanas. Common rice selling at 7½ seers a rupee at Bhadrak. 201 men, 808 women and 725 children—total 1,734—at Sadar, and 7,012 persons at Bhadrak receiving gratuitous relief. Test-works closed.
26	ANGUL ...	1·15	6	5	Weather seasonable. Rainfall at Phulbani 1·61 inches. Harvesting of millets and *bhadoi* paddy and sowing of *rabi* crops in progress. Condition of agricultural stock fair. Cheapest rice selling at 7½ seers in the Khondmals. Persons on gratuitous relief—87 men, 181 women and 596 children—total 864—in Angul, and 119 men, 156 women and 66 children—total 341—in Khondmals. Persons on test-works—350 men, 138 women and 72 children—total 560—in Angul, and 467 men, 83 women and 67 children—total 617—in the Khondmals.
27	PURI ...	1·20	6 3/16	6 3/16	Rainfall at Khurda 0·54 inch. Floods subsiding over the whole district except Marichpore. Transplantation and weeding of *saradh* paddy continuing. Insect-pests disappearing in Khurda. Crops damaged by floods replaced by retransplantation. *Biali* paddy and *mandia* ripening. Vegetables and other miscellaneous crops growing well. Prices of common rice stationary. Persons attending test-works—292 men, 103 women and 306 children—total 701. Number of persons on gratuitous relief—398 men, 1,452 women and 1,299 children—total 3,149. Seven men attending piece-works.

28	SAMBALPUR ...	1·46	10	9¼	Weeding of winter rice and sowing of *til*, *kurthi* and *urid* still continuing. Reaping of autumn rice commenced in some places. Condition of sugarcane good and that of *bhadoi til* fair. Stocks of food-grains and fodder and water-supply sufficient. No apprehension of famine or scarcity. Cattle-disease in many villages in both tahsils. Cheapest rice selling at 11¼ seers a rupee at Bargarh.
29	HAZARIBAGH...	1·47	8¼* 9†	8* 10†	Rainfall at Giridih 5·17 inches. Weather seasonable. State of standing crops good. Harvesting of *bhadoi* crops finished. Fodder and water sufficient. Cattle-disease reported from one thana. Rice selling 6 to 8½ seers per rupee and maize 7 to 9½ seers per rupee in the interior Persons gratuitously relieved—men 669, women 1,722 and children 1,272—total 3,663. No attendance on District Board work.
30	RANCHI ...	1·49	8*	7 9/16*	Weather seasonable. Standing crops doing well. Sowing of *sirguja* and *kurthi* continuing. Plant-disease locally called *sanda* reported to have attacked paddy crops in thana Torpa. Cattle-disease reported from one thana. Fodder and water sufficient. Common rice selling at 6¼ seers per rupee. Persons attending test-works—men 265, women 261 and children 93—total 619. On gratuitous relief in undeclared area—men 33, women 259 and children 12—total 304. Persons on famine relief-works in declared area—men 1,127, women 1,396 and children 757—total 3,280. On gratuitous relief in declared area—men 832, women 2,645 and children 1,778—total 5,255.
31	PALAMAU ...	1·47	7⅜	7⅜	Weather seasonable. *Kurthi* and *til* being sown. *Bhadoi* paddy generally doing well. Fields for *rabi* crops being prepared. Local grain stocks insufficient. Condition of agricultural stock normal. Fodder and water sufficient. Some cattle-disease.
32	MANBHUM ...	1·01	8	8	Rainfall at Gobindpur 3·10 inches. Weather seasonable. State of standing crops good. Outturn of autumn rice and *marua* estimated at 90 per cent. Fodder and water sufficient. Cattle-disease not reported. Agricultural stock in fair condition. Prices of staple food-grains practically stationary. Common rice selling at 7 seers per rupee at Dhanbaid. Stocks of food-grains adequate. Demand for labour good.
33	SINGHBHUM ...	2·64	6	6	Weather generally hot and cloudy. Harvesting of *gora* paddy commenced. Sowings of *kurthi* and *sirguja* in progress. Outturn of harvest good. No cattle-disease. Fodder and water sufficient. Rice selling at 7 seers per rupee at Kharsawan and 7½ seers at Seraikella.
34	COOCH BEHAR	11·14	6⅝	6¾	Weather cloudy. Transplantation of *haimantik* paddy and cutting and steeping of jute continuing. Prospects of crops improved. Fodder and water sufficient.

* Husked rice.

Heavy rain in Sonpur. Transplantation of paddy plants completed in some of the States and approaching completion in other States. Weeding in progress in all States. Sowing of *til* in progress in Hindol, Keonjhar, Ranpur, Kalahandi, Sonpur, Patna, Gangpur and Dhenkanal. and land being prepared for sowing it in Boad and Baramba. Standing crops and sugarcane in good condition. Cotton in flower in Baramba and Nayagarh. Some damage reported to paddy plants in riparian tracts in Narsingpur and Khandpara and paddy injured in ten villages in Baramba. Harvesting of early rice crops commenced in Athgarh, Baramba, Hindol, Kalahandi, Mayurbhanj and Nilgiri and *gora* paddy in Keonjhar and *gulji* in Bonai and Kalahandi. Fodder and water sufficient and agricultural stock sufficient also except in Narsingpur and Pal Lahera. Price of rice fallen from 7 to 8 seers per rupee in Daspalla, 8½ to 9¼ in Boad, 7 to 7½ in Rairakhol and 10 to 11 in Patna and stationary elsewhere.

* The report is for the week ending the 8th September 1908.

GENERAL SUMMARY.—Rain was general all over the Province, the fall being good in the Presidency and Bhagalpur Divisions and in North Bihar. In the latter tracts transplantation of paddy has been resumed and the agricultural outlook has improved. More rain is still needed in North Bihar Harvesting of jute and *bhadoi* paddy continues Sugarcane is doing well. Prospects of *aman* paddy are fair in the tract where transplantation has been finished. Damage has been caused by floods in Puri, Cuttack, and especially in Balasore. Insect-pests are still doing injury in the 24-Parganas and Ranchi. The price of common rice has fallen in Bankura, Nadia, Gaya, Shahabad, Bhagalpur, Balasore, Angul, Sambalpur, Hazaribagh and Ranchi and risen in Saran only. Stocks of food-grains are still reported to be insufficient in Nadia and Palamau. Scarcity is apprehended in parts of Saran. Cattle-disease is reported from Burdwan, Shahabad, Purnea, Sambalpur, Hazaribagh, Ranchi and Palamau. The supply of fodder and water is sufficient throughout the Province. The number of persons attending test works in Bankura, Nadia, Murshidabad, Cuttack, Angul, Puri and Ranchi was 5,851. Gratuitous relief was given to 34,491 persons, of whom 19,174 are in Orissa. The number of persons on famine relief works in Ranchi was 3,280.

SUMMARY OF THE RAINFALL OBSERVATIONS TAKEN IN BENGAL DURING THE MONTH OF AUGUST 1908.

During the month of August, the rainfall was in general defect throughout Bihar and Bengal proper, Bankura, Midnapore and Calcutta excepted, where it was slightly in excess of the normal. It was heavy in Orissa, Ranchi, and Singbhum. Expressed in percentage figures, Sambalpur, Angul, Cuttack, Balasore, Puri, Ranchi, and Singbhum received 199, 137, 152, 149, 157, 131 and 146 per cent. of rain respectively. In Bihar the fall was in defect. The deficiency was greatest in the districts of Patna, Champaran, Muzaffarpur, Darbhanga, Monghyr, Bhagalpur, and Purnea. All the above districts recorded less than 60 per cent. of the normal fall. On an average South-West Bengal received 10 04 inches, Bihar 6·29 inches, Orissa 19·32 inches, and Chota Nagpur 13·71 inches. The departure from the normal was —1 70 inches in South-West Bengal, —5·54 inches in Bihar, +7 04 inches in Orissa, and +0·37 inches in Chota Nagpur.

From the Divisional percentage tables attached it will be seen that South-West Bengal received 86 per cent., Bihar 53 per cent., Orissa 157 per cent, and Chota Nagpur 103 per cent. of rain.

The total rainfall from January to August was 105 per cent. in South-West Bengal, 59 per cent. in Bihar, 102 per cent. in Orissa, and 90 per cent. in Chota Nagpur.

The following table compares the rainfall in the four divisions during the month of August with the normal fall, the actual being given as a percentage of the normal. The table also shows the actual falls for each of the previous months of the year expressed in the same way, and the last column of the table shows the total rainfall of the past eight months of the year 1908:—

METEOROLOGICAL DIVISIONS.	January.	February.	March.	April.	May.	June.	July.	August.	Actual rainfall of first eight months of 1908 expressed as a percentage of the normal fall for the period.

W. R. GOURLAY,
Offg. Director of Agriculture, Bengal.

The 15th September 1908.

Abstract of the Results of Meteorological Observations taken at the Alipore Observatory in the month of August 1908.

	Inches.	Date.	Hour.
The mean pressure of the month	29·569		
The average pressure of August from 44 years' registers ...	29·596		
The highest pressure in the month	29·735	31st	10
The lowest pressure in the month	29·453	26th	16
The range of pressure	0 282		
	Hours.		
The total number of hours of bright sunshine during the month	126·7		
The maximum possible number of hours of sunshine ...	398·4		
The mean temperature of the month	83·3		
The average temperature of August from 20 years' registers ...	82 5		
The highest temperature in the month	90·8	9th and 25th	
The lowest temperature in the month	76·5	30th	
The range of temperature during the month	14·3		
The mean daily range of temperature	9·5		
The greatest range of temperature in one day	12·4	4th	
	Per cent.		
The mean humidity of the month	87		
The average humidity of August from 20 years' registers ...	88		
	Inches.		
The mean vapour tension of the month ..	0·956		
The average vapour tension of August from 20 years' registers ..	·957		
The mean cloud proportion of the month	8·31		
The average cloud proportion of August from 31 years' registers	8·08		
	Inches.		
The total rainfall of the month . ..	14·43		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 8 feet above the ground)	14·27		
The average fall of August from 24 years' registers ...	12 69		
The greatest fall in 24 hours ..	1·51	22th	
	Days.		
The number of rainy days in the month	22		
The average number of rainy days in August from 24 years' registers	19		
	θ		
The mean maximum equilibrium temperature of solar radiation during the month	145·7		
The mean difference of sun and air temperatures .. .	57·4		
The greatest sun temperature	155·5	25th	
The greatest excess of sun over air temperature .	64·7	25th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76 7		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	2·1		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature .. .	3·1		
	Miles.		
The mean movement of the wind per day ,, .	113·1		
The greatest movement of the wind in one day	226·0		
The greatest movement of the wind in one hour	13		9 to 10½ A.M. and 11 to noon of 1st. 10 to 11 A.M. and 3 to 4 P.M. of 2nd. 10 to 11 A.M. of 3rd. 9 to 10 A.M. of 29th.

The number of hours with winds from each of the eight points—

N. 1, N.E. 25, E. 179, S.E. 287, S. 183, S.W. 33, W. 4, N.W. 10, Calm 17.

C. W. PEAKE,
for *Offg. Director-General of Observatories.*

	Inches.
The mean pressure of the seven days	29·713
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·652
	Hours.
The total number of hours of bright sunshine	18·8
The maximum possible number of hours of sunshine	86·6
	°
The mean temperature of the seven days	82·8
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·2
The extreme variation of temperature	15·9
The maximum temperature	90·6
	Miles.
The highest velocity of the wind in one hour	13
	%
The mean relative humidity	88
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 6th to 12th September 1908	3·24
The average fall of the corresponding period for 24 years, Surveyor-General's Office	3·03
The total fall from 1st January to 12th September 1908	74 63
The average fall of the corresponding period for 24 years, Surveyor-General's Office	53·68

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; g, dark, gloomy; t, thunder; <, lightning d, drizzling rain.

C. W. PEAKE,
for Offg. Director-General of Observatories.

LIBERALITY OF MUNSHI KALIMUDDIN.

No. 1564L.S.-G., dated Calcutta, the 17th September 1908.

From—C. E. A. W. OLDHAM, ESQ., Secretary to the Govt. of Bengal, Municipal Department,

To—The Commissioner of the Bhagalpur Division.

I AM directed to acknowledge the receipt of your memorandum No. 138-P.W.D., dated the 10th September 1908, and enclosure, in which you report that Munshi Kalimuddin, Zamindar and Honorary Magistrate of Kishanganj, has paid Rs. 4,250 towards the construction of a bridge on the Ramjan river at Kishanganj, and a further sum of Rs. 4,000 towards the construction of a bridge on the Pitanu river at Goagaon, in the Kishanganj subdivision.

2. In reply, I am to request that you will be so good as to convey to the donor an expression of the Lieutenant-Governor's appreciation of his liberality and public spirit.

REPORT ON THE ADMINISTRATION OF THE EXCISE DEPARTMENT IN BENGAL DURING THE YEAR 1907-08.

NOTIFICATION.

No. 821S.R.—The 22nd September 1908.—The following extracts from the Report of the Commissioner of Excise on the administration of the Excise Department in Bengal during the year 1907-08, and from the letter from the Board of Revenue reviewing the Report, are published for general information.

C. E. A. W. OLDHAM,
Secretary to the Govt. of Bengal.

No. 4860B., dated Calcutta, the 4th September 1908.

From—PANDIT RAMA BALLABH MISRA, M.A., Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in charge:
THE HON'BLE MR. E. W. COLLIN, I.C.S.

I AM directed by the Board of Revenue to submit the Report of the Commissioner of Excise, Bengal, on the administration of the Excise Department during the year 1907-08.

2. *Administrative changes.*—The administrative changes of the year included the further extension of the Contract Distillery system to an area of 45,451 square miles as against 21,655 square miles in the preceding year. The working of the system is considered in a later paragraph. The whole machinery of the Local Excise administration came under examination during the year in consequence of a series of Resolutions in which the Government of India reviewed the various reforms recommended by the Indian Excise Committee. As the result of the discussions the following measures were adopted during or since the close of the year:—

(1) Triennial instead of annual settlement of *pachwai* shops paying an annual license fee of over Rs. 200.
(2) Extension of distillery areas in Bihar.
(3) Fixing of maximum prices and issue strengths in the central distillery areas in certain districts of the Patna Division, the Sonthal Parganas, Bhagalpur and Ranchi.
(4) Revision of rates of duty in twelve districts, including Calcutta.
(5) Levy of different rates of duty in urban and rural areas in the districts of the Patna Division (except Shahabad).
(6) Constitution of a distillery area in the district of Ranchi.
(7) Restriction of the limits of retail sale of country liquor.
(8) Abolition of passes for the transport of imported liquor.
(9) Revision of the rates of fees of imported liquor in Railway Refreshment Rooms.

Further steps were taken for the amendment of the Excise Law for the Province which had been held in abeyance until receipt of the orders of the Government of India on the Indian Excise Committee's Report and a revised Bill was prepared. It has since undergone further modification in the light of the criticisms of the Government of India, and their final sanction is awaited.

Among other reforms may be mentioned the imposition of restrictions on morphia and novocain, and the enhancement of the rate of duty on locally manufactured beer from one anna to two annas per imperial gallon.

3. *Revenue.*—The total receipts of the year amount to 170¾ lakhs, which represent an increase of 10 lakhs or 6 per cent. on the figures of the previous year. Country spirit, *ganja* and opium account for 94 lakhs, 26½ lakhs and 26¼ lakhs or 55 per cent., 15 per cent. and 15 per cent., respectively, of the total revenue of the year. The receipts from

country spirit and opium show an increase of 7 lakhs and 2¾ lakhs, or 8 per cent. and 11 per cent., respectively, while the receipts from *ganja* show a falling off to the extent of 1·4 per cent. During the year under report, the incidence of taxation per gallon of L.-P. spirit under the Sadar Distillery system was Rs. 5·5, and under the Contract Distillery system Rs. 4·3, and the average fee for each outstill was Rs. 2,393. The corresponding figures for the preceding year were Rs. 5·5, Rs. 3·7 and Rs. 1,940, respectively, taking the same geographical areas, irrespective of the change of system. Owing to the increase of duty, the difference between the incidence of taxation in areas under the two systems is being removed, but the figures, as noted in the report for the preceding year, indicate that the taxation in the Contract area is capable of further increase.

4. *Country spirit.*—Calcutta was again responsible for more than 25 per cent. of the total revenue from country spirit, the Russa distillery continuing to be the source of supply. There was an increase of 25,897 L.-P. gallons in the consumption of the Russa spirit, accompanied by an increase of 1,942 gallons in the consumption of country rum, the total increase being 8·2 per cent. on the aggregate consumption of country spirit and country rum taken together. This result is attributed chiefly to the fact that the vendors laid in large stocks in March 1908 in anticipation of the increase in duty. It does not appear that the increased consumption has been attended with any increase of drunkenness, the number of convictions for which decreased from 7,042 in 1906-07 to 6,807 in 1907-08. The Excise Commissioner has, referred to the appointment of a Committee to examine certain questions connected with the liquor trade in Calcutta. Since the close of the year under report the following measures have been taken to check consumption, viz.—(1) the increase of duty from Rs. 5 to Rs. 5-10 per gallon L.-P., (2) the reduction in the number of shops, and (3) the reduction of the limit of retail sale and possession from 12 to 6 bottles. The situation will be carefully watched.

It is interesting to learn from the report that the large decrease in the amount of license fees obtained at the last settlement of country spirit shops in the district of Angul and Khondmals is due to a movement on the part of the Khonds to give up drinking.

5. *The reduction of the outstill area.*—In consequence of the further development of the Contract Distillery system and the extension of the central distillery areas in some parts of Bihar and in the district of Ranchi, the outstill area of the Province has been reduced since 1st April 1905 from 71,140 to 60,101 square miles or by 11,039 square miles. It is proposed to extend the Contract system next year to the Monghyr, Bhagalpur and Purnea districts. The main difficulty of further reducing the outstill area arises from the fact that the people of Bihar and Chota Nagpur drink a very weak liquor, which cannot be conveyed for long distances. There is a danger that, by introducing the Distillery or Contract system, the people may be induced to drink a stronger liquor than at present.

6. *Contract Supply system.*—The Excise Commissioner has reported fully on the working of the system, the main features of which are the concentration of the preparation of liquor in the hands of a few contractors, the supply of liquor at fixed strengths and prices, and the separation of manufacture and retail vend. The advantages of the system, as stated by the Indian Excise Committee, are that it ensures the supply of liquor at a low and constant price for a specified period, with the result that accurate and profitable taxation is facilitated. The distiller is put in a position to meet the requirements of Government on a definite basis, while the retail vendor can calculate accurately the fee which he can afford for his license. The system has been gradually introduced since 1905-06, and it is too early to properly estimate its effect. It would appear that the difficulties of the retail vendors have not been removed, as the percentage of the revenue paid by them in the shape of license fees in districts to which the Contract system was extended in 1905-06 varies from 57 per cent. in Puri to 30 per cent. in Midnapore, while the variations are equally noticeable in the districts brought under the system in 1906-07. The figures given in the report show large increases

in the settlements of license fees in the Contract areas for the current year, which do not appear to be justified by the consumption so far as it has been ascertained. It is understood that the varying incidence of the license fees accounts for the differences in the revenue derived by Government from the increased consumption of country liquor. For instance, in Midnapore the profit to Government from this increase was at the rate of about Rs. 2 per gallon, whereas in Howrah and Hooghly it was over Rs. 9 per gallon. Now that the price of the liquor is fixed, and the consumption can be estimated with some accuracy, and can also be regulated by raising or lowering the duty, the position of vendors is capable of improvement, and more responsible licensees can be introduced, as suggested by the Indian Excise Committee. This matter should be borne in mind at the next settlement.

In addition to the advantages referred to above, as anticipated from the introduction of the Contract system, the Excise Commissioner points to other results which affect the consumer. Good liquor has been provided at reasonable prices, and the temptation to drink cheap foreign liquors, or to distill liquor privately, has been removed. It appears that in most of the districts in the Contract area the consumption of country liquor has considerably increased. The Excise Commissioner shows that, on the whole, there has been a decrease, but his figures include those of the Manbhum district, which are obviously inaccurate. Excluding this district and the portion of Bankura, in which the outstill system was in force, there was an increase of consumption of 33 per cent.. The largest increases were in Nadia (107 per cent)., the Sonthal Parganas (99 per cent)., Sambalpur (80 per cent.), Burdwan (73 per cent)., Murshidabad (63 per cent.) and Birbhum (53 per cent).

The increase is ascribed partly to the substitution of country liquor for imported spirits and to the decrease of illicit distillation. The report of the Excise Commissioner, however, shows that the sale of imported liquors has increased, and, so far as figures showing the detection of illicit distillation are any evidence, there has been an increase of such practices. In both cases, however, the information of the Excise Department is not very reliable, and the Board are disposed to agree with the Commissioner that the introduction of good and cheap country spirit must have had an effect in displacing the use of imported or illicitly distilled liquors. It is possible that the figures of consumption for the previous year, when the above-mentioned districts were served by local distilleries, were incorrectly recorded, but it is observed that the yearly increase of revenue from distillery liquor is more noticeable in districts under the Contract system than in others. The reports also of the Collectors point to an increase not only in consumption, but in the number of consumers, and they ascribe it partly to the popularity of the new liquor due to its improved quality and cheapness, and to the closer supervision over the vendors. This result appears to have been anticipated by the Indian Excise Committee, who were of opinion that, with improved administration, it would be necessary to raise the duty on liquor, especially in the Eastern districts of the Province. This subject has received the constant attention of the Board. The rate of duty was raised in ten districts from the beginning of the year, and was raised in two subdivisions of the Burdwan district from the 1st November 1907. The working of the system was reviewed during the year in consultation with the District Officers, and the license fees for the current year were raised. It was decided to await the complete results of the year's working, and to see the effect of the increase of license fees, before raising the rates in any district, and this matter is now under consideration. Meanwhile steps are being taken to increase the price of country liquor in Burdwan, Birbhum and the Sonthal Parganas. The question of the rate is one of some difficulty, as there is a danger of driving the people to illicit distillation, and the Preventive Staff of the Excise Department is insufficient to deal with such practices. A proper system of taxation is not possible without effective control, and it is hoped that this deficiency will be supplied when the proposals for completing the Excise Staff are complete.

* * * * * *

12. *Ganja.*—The decrease of more than a quarter of a lakh of rupees in the license fees realised from *ganja* during the year under report is attributed to the absence of competition at the annual sales caused by the high price of the drug at Naugaon. The wholesale price of *ganja* has in recent years varied from Rs. 20 to Rs. 400 per maund, introducing thereby an element of speculation into the trade. The undesirability of such violent fluctuations in the price of an exciseable article was during the year brought to the notice of the Board of Revenue, Eastern Bengal and Assam, and the matter is under consideration. The Excise Commissioner reports that the discontinuance of the importation of Rajshahi *ganja* into Sambalpur and the issue of Khandwa *ganja* alone in that district have led to the smuggling of Garhjat *ganja* on an extensive scale. The information on the subject, however, is not complete. It was believed that the introduction of the Cooch Behar system of supplying *ganja* into the Garhjat States had entirely suppressed the cultivation of *ganja* in those States, and from a report of the Superintendent of Tributary Mahals in Orissa it appears that there has not been any appreciable revival of illicit cultivation in those Mahals. In his opinion, the *ganja* smuggled is produced in the district of Ganjam in the Madras Presidency. The subject of the illicit cultivation of *ganja* in Ganjam and its smuggling into the bordering districts of Orissa has been brought to the notice of the Madras Government, and the Board of Revenue, Madras, have promised to cause a thorough investigation to be made in the matter.

* * * * * *

14. *Opium*—There was a large increase in the sale of opium during the year under report. The great increase of 193 maunds 31 seers in Calcutta is attributed by the Superintendent of Excise Revenue, Calcutta, to the activity of smuggling operations in Rangoon and in Burma generally. Several important cases of opium smuggling were detected during the year. The suggestions recently made by the Government of Burma as to the measures which should be adopted to check smuggling of opium into that Province are under consideration. It may be mentioned in this connection that during the year under report arrangements were made with the East Indian Railway, the Eastern Bengal State Railway and the Bengal-Nagpur Railway authorities to allow Excise officers to examine the parcel registers at their Railway stations, when necessary, with a view to ascertain the names of the consignors and consignees of suspected parcels. The consent of the Inspector-General of Prisons, Bengal, was also obtained to officers of the Excise Department, of rank not below that of a Sub-Inspector, being allowed permission to interrogate any prisoner in the jail in connection with Opium and Excise cases. Since the close of the year, rules have been framed with a view to keeping the Opium Agents better informed by the Excise Department of cases of smuggling of opium from districts within their respective Agencies, in order that they may trace the identity of the prisoner and the source from which the illicit supplies were obtained.

The consumption of opium in the districts of Cuttack, Angul, Puri and Sambalpur shows an increase in spite of an increase of the treasury prices, while that in Balasore shows a decrease of 24 maunds. The increase in Cuttack and Sambalpur is attributed partly to increased supplies taken by the Feudatory States, while the decrease in Balasore is said to be due to smaller supplies being taken for the same States. The subject requires further consideration. Opium has always been popular among the people of Orissa both as a household remedy and as a prophylactic against malaria. The consumption probably depends to a large extent on the ability of the people to purchase the drug, which was lessened last year in Balasore by the prevailing scarcity. The Board have approved the Excise Commissioner's suggestion that steps should be taken to put down the hawking of opium in *hâts* which was allowed to continue in certain parts of the Orissa Division till recently.

The increase in the consumption of opium in Midnapore is attributed to the smuggling of duty-paid opium into Balasore and Mourbhanj. The retail selling price, however, in both the districts is the same, viz., Rs. 45 a

seer, and smuggling cannot be profitable unless the vendors themselves carry it on. It seems necessary that a close watch should be kept on the supplies of opium taken by the vendors in Midnapore and on their disposal of them.

The Excise Commissioner again brings to notice, though without comment, the increase in the habit of opium smoking in Calcutta and in Orissa. He quotes the opinion of the Superintendent of Excise Revenue, Calcutta, that the opium dens continue to flourish and multiply, and that, in consequence of the difficulties in the way of Excise officers getting access to such places, opium smoking is more freely indulged in than when these premises were under Government control. The licensing of shops for the manufacture and sale of *madak* and *chandu* was abandoned in this Province from the 1st April 1896 as the result of the recommendation of the Royal Commission on Opium. Since then, the aggregate quantity of opium preparations or admixtures that may be possessed by a party of smokers has been limited to five tolas with the object of enabling the Excise and Police officers to deal with evasions of the Opium Rules by members of opium-smoking clubs. In 1903, the Board after consulting the Commissioner of Excise reported to Government that the rules restricting the possession of preparations or admixtures of opium by individuals to one tola and by a party of smokers to five tolas were working successfully, and that the suppression of the smoking of *madak* and *chandu* was a matter of preventive action and could only be effected gradually. A reversion to the old system of licensing premises for opium smoking will not be possible, except upon the clearest evidence of the failure of the policy adopted upon the recommendation of the Opium Commission. A separate report on the subject will be called for by the Board from the Excise Commissioner.

It appears that the use of pills containing *morphia* manufactured in Calcutta has been acquiring a certain vogue in some parts of the Province. The working of the rules recently issued restricting the possession and sale of *morphia* and its preparations will be watched.

15. *Cocaine.*—It is satisfactory to find evidence of the success of the measures taken to suppress the illicit traffic in cocaine. The drug is now chiefly smuggled into Calcutta by lascars on board the vessels trading between Europe and India. The detection of such cases requires special watchfulness on the part of the Customs Preventive Officers. The Collector of Customs, Calcutta, will be asked to hold out to these officers promises of liberal rewards for the detection of such offences.

16. *Offences.*—There was an increase in the number of persons convicted during the year, especially under the head of illicit distillation of country liquors (467 persons against 293). There was a corresponding decrease of offences under the *pachwai* regulations, owing, it is said, to a growing taste for the improved country spirit. The returns are swollen by a considerable increase under the head of other offences (104 against 8) due to conviction in the 24-Parganas of persons smuggling Russa liquor into the Contract area. The increased number of convictions for illicit distillation is not held to be an indication of the prevalence of such practices. It was due to the special activity of the Excise staff in particular areas. The working of the year emphasizes the necessity of reorganizing the preventive establishments, especially in the Contract areas, in order to obtain the full effect of the system. This subject is under consideration.

The Excise Commissioner renews the complaint of the want of interest evinced by the Police Department in Excise work. This subject was noticed in last year's review and is still under discussion. The inadequate sentences passed by Magistrates in cases, which end in conviction, show that the importance of the suppression of illicit practices is not fully realized. The Excise Department should press for exemplary punishment in cases of opium smuggling and illicit distillation of country liquor, and the attention of District Officers should be called to any failure of the Court to pass adequate sentences.

* * * * * *

No. 45E., dated Calcutta, the 5th August 1908.

From—B. FOLEY, Esq., M.A., I.C.S., Offg. Commissioner of Excise and Salt, Bengal,
To—The Secretary to the Board of Revenue, L. P.

I HAVE the honour to submit the following report on the administration of the Excise Department in the Province of Bengal for the year 1907-08. Mr. E. Geake was in charge of the department from the 1st April 1907 to the 27th February 1908, on which date I took over charge.

* * * * * *

Total Revenue and charges.

6. The Excise revenue and charges of the Province for the last five years are shown below:—

Period.	Revenue.	Charges.	Net Revenue.	Percentage of charges.
	Rs.	Rs.	Rs.	
1903-04	1,37,18,461	7,07,103	1,30,11,358	5·15
1904-05	1,41,98,334	6,80,021	1,35,18,313	4·78
1905-06	1,53,18,436	6,90,480	1,46,27,956	4·50
1906-07	1,60,79,779	7,35,356	1,53,44,423	4·57
1907-08	1,70,78,073	7,76,514	1,63,01,559	4·54
Difference of the past two years	+9,98,294	+41,158	+9,57,136	— ·03

The net revenue shows an increase of Rs. 9,57,136 or 6·2 per cent. over the figures of the previous year, and is the highest on record.

* * * * * * *

Revenue under different heads.

11. There was an increase under every head except ganja, imported liquors and beer. The largest increase was manifest, as in the previous year, under the head of country spirits, being Rs. 7,09,706. Opium comes next with an increase of Rs. 2,67,525, followed by tari, rum and pachwai, which yielded an increase of Rs. 47,131, Rs. 26,8)4 and Rs. 9,068, respectively. The largest decrease (Rs. 36,395) is to be found under the head ganja. The fluctuations in the revenue from the different exciseable articles are discussed in detail under each head.

12. * * * Taking the population of Bengal according to the last census at 51 millions, the incidence of the excise revenue of the year is 5 annas 4 pies per head, against 5 annas in the previous year; but if an allowance of 7 per thousand per annum, which represents the average annual growth of population, is made, the incidence of the excise revenue is 5 annas 1 pie per head.

Result of settlements up to 31st May 1908.

13. * * * There was a total increase of Rs. 4,48,372 shared by all the Divisions, except Patna, which showed a decrease of Rs. 1,59,334, the net increase being Rs. 2,89,038.

* * * * * *

SECTION II.—COUNTRY SPIRIT.

Systems.

14. There are three systems for the manufacture and sale of country spirits, viz., the central distillery, the outstill and the contract supply system. The revenue contributed by each is shown in the margin.*

* Receipts in 1907-08—

	Rs.
Central distillery system	35,25,490
Outstill system ...	39,69,433
Contract supply system	19,06,152

Distillery revenue and consumption.

15. The total distillery revenue was Rs. 35,25,490 against Rs. 33,39,646† in the previous year, showing an increase of Rs. 1,85,844. There was an increase of Rs. 78,136 in license fees and of Rs. 1,53,462 in duty, while there was a decrease of Rs. 45,754 in distillery fees. The consumption of distillery liquor was 646,579

† Excluding Rs. 9,30,104, being the distillery revenue of the districts and subdivisions where the contract supply system was introduced during the year.

gallons L.-P. against 612,071* in the previous year, showing an increase of 34,508. The increase was most marked in Calcutta (25,897 gallons L.-P.) which is due chiefly to the fact that vendors had laid in large stocks in March 1908 in anticipation of the increase in duty; it is also attributed to the progressive increase of population, increased facilities of railway communication and the transport of distillery liquor to the Barrackpore and Barasot subdivisions, where consumers prefer it to contract spirit. The decrease of 6,619 gallons L.-P. in Patna is attributed to the high price of food-grains. The distilleries in the Patna Division and in Monghyr and Bhagalpur were leased to single distillers in order to cheapen the cost of production and to improve the present methods of manufacture and supply. There was a decrease of Rs. 45,754 in distillery fees due to the fact that distillery fees are not imposed on single distillers.

* Excluding 142,048, gallons L.-P., being the consumption of distillery liquor in the districts and subdivisions where the contract supply system was introduced during the year.

Outstill revenue.

16. The outstill revenue was Rs. 39,69,433 against Rs. 36,74,073 † showing an increase of Rs. 2,95,360. The increase was large in Gaya (Rs. 79,560), Ranchi (Rs. 59,600), Patna (Rs. 48,094), Palamau (Rs. 46,759), Hazaribagh Rs. 36,558), and Purnea (Rs. 30,805), and was due to keen competition at the annual sales.

† Excluding Rs. 3,19,550 being the outstill revenue of the districts of Bankura and Manbhum, into which the contract supply system was introduced during the year.

Districts and subdivisions in which contract supply system was in force.

17. In accordance with orders received from the Board of Revenue the working of the contract supply system is described in detail. This system was in force in 19 districts (including parts of districts) during the year 1907-08, viz., in Burdwan, Birbhum, Bankura, Midnapore, Hooghly, Howrah, Nadia, Murshidabad, Jessore, Khulna, Darjeeling, Cuttack, Balasore, Puri, Manbhum, the Barasct, Basirhat, Barrackpore and Diamond Harbour subdivisions of the 24-Parganas district, the Deoghur, Jamtara, Rajmehal and Pakour subdivisions of the district of the Sonthal Parganas, in Giridih (distillery area) in the district of Hazaribagh, and in the distillery area of Sambalpur. The system was first introduced into the districts of Midnapore, Cuttack, Balasore and Puri in 1905-06, and into the districts of Darjeeling, Murshidabad, Jessore and Khulna in 1906-07. It was extended to the remaining districts and subdivisions in 1907-08. The main grounds for the extension were (1) that a more wholesome spirit would be supplied, (2) that the price of country spirit in many districts was excessive as compared with the price of imported spirit and the consumption of the latter spirit was thereby encouraged, (3) that the issue of contract spirit would check illicit distillation and smuggling among the poorer and the use of foreign liquor among the richer classes, and (4) that there would be a considerable saving in distillery establishment.

* * * * * *

Revision of rates of duty.

19. The contract areas, excluding Sambalpur and Darjeeling, were divided into three zones or belts according to the material condition and drinking habits of the people, the first comprising the metropolitan districts of the 24-Parganas, Nadia, Jessore, Khulna, Howrah and Hooghly (excluding Arambagh subdivision), where a duty of Rs. 5 per gallon L.-P. was fixed as in Calcutta; the second comprising the districts of Burdwan (excluding the Asansol subdivision), Midnapore (excluding the former outstill area), the Arambagh subdivision of Hooghly and Murshidabad, where the duty was fixed at Rs. 3-12 a gallon L.-P.; the third comprising the Asansol subdivision of Burdwan, the Deoghur, Jamtara, Pakour and Rajmehal subdivisons of the Sonthal Parganas, the distillery area of the Hazaribagh district, Manbhum, Bankura, Birbhum, Balasore, Cuttack and Puri, where the duty was fixed at Rs. 2-8 per L.-P. gallon. In Asansol, however, the duty was raised to Rs. 3-2 per gallon L.-P. at the beginning of the year. In Darjeeling the existing rate of duty, Rs. 3 per gallon L.-P., for strengths over 70 U.-P. and 10 annas per gross gallon for 70 U.-P., was maintained. In Sambalpur the duty remained at Re. 1-4 per L.-P. gallon.

* * * * * *

20. A preferential rate of duty at 4 annas per gross gallon was fixed for 70° U.-P. in the districts of Manbhum and Bankura and in the old outstill tract of the district of Midnapore. The object was to prevent stronger being substituted for weaker liquor and to discourage illicit distillation among the aboriginal tribes. In Darjeeling also the duty on 70° U.-P. liquor, at which strength liquor is chiefly in demand in the district, was fixed at 10 annas per gallon.

Preferential rate of duty.

* * * * * *

In accordance with the recommendations made by the Excise Committee in paragraphs 186 and 253 of their report, the issue strengths have been fixed at 20°, 50° and 70° U.-P. throughout the contract areas. Liquor at 70° U.-P. has only been issued in districts where the people are accustomed to weak liquor. In most of the other districts difficulty has been experienced in inducing the vendors even to take liquor of as low a strength as 50° U.-P.

* * * * * *

25. The limit of retail sale before the introduction of the contract system had been 12 bottles in Burdwan, Birbhum, Bankura (distillery area), Hooghly (except within three miles of Chandernagore), Howrah, 24-Parganas (Baraset, Basirhat, Barrackpore and Diamond Harbour subdivisions), Nadia, Murshidabad, Jessore, Khulna, Cuttack, Balasore and the Sonthal Parganas (Deoghur, Jamtara, Rajmehal and Pakour subdivisions). In all these districts the limit was reduced to 3 bottles on the introduction of the system except in Cuttack and Balasore, where it was reduced to one. In the Bankura and Midnapore outstill areas the limit had been 6; this was retained for the strength of 70° U.-P. only, while for other strengths the limit was fixed at 3 bottles in Bankura and at one bottle in Midnapore. In Darjeeling the limit was reduced from 6 to 2, and in Manbhum from 6 to 3, except for 70° U.-P. liquor where 6 was retained. In Hooghly, within three miles of Chandernagore, and in Puri the limit remained at 1 bottle, in Giridih (distillery area) in Hazaribagh at 3 bottles and in Sambalpur at 1 seer. The limit was reduced partly in order to check the smuggling of outstill liquor into contract areas and of contract liquor into Calcutta, and partly to stop illicit sale and excessive private drinking.

Limits of retail sale.

* * * * * *

The total consumption of contract spirit during the year was 442,938 gallons L.-P., against an estimated 452,530 gallons L.-P. (240,335 gallons L.-P. distillery and contract spirit and 212,195 gallons L.-P., estimated outstill liquor in Bankura and Manbhum) in the previous year. The total revenue in contract areas was Rs. 19,06,152 against Rs. 16,77,650 (Rs. 13,58,100 on account of distillery and contract spirit and Rs. 3,19,550 on account of outstills) in the previous year.

The working of the contract system can fairly be judged from the remarks made above. It will be seen that certain advantages claimed for the system have no doubt been secured. Good liquor has been placed within the reach of every one at reasonable prices, and the temptation to substitute foreign for country spirit has in certain places been removed. There is no doubt also that in other districts the effect has been to decrease illicit practices. A great advantage of the system is also that it enables Government to watch and control the consumption. If the consumption in any part of the country shows an undue increase, the duty and the maximum price of the spirit can at once be raised and the consumption forced down. Thus the system provides a machinery for carrying out the avowed policy of Government to exact as large a revenue as possible from as small a consumption as possible. Increased preventive establishment is necessary for the proper working of the system, but it is hoped that this will be provided in the near future. The chief objection brought against the system is that, if introduced into areas where weak liquor is drunk, it may tend to encourage the taste for strong liquor among the people and to cause the disappearance of the weakest kinds of liquor. This forms the chief obstacle to its introduction in Behar. So far, however, such an effect has only been noticed in the distillery area of Giridih. The best remedy seems to multiply the number of warehouses for storage in out-of-the-way places. The Balarampur warehouse in Manbhum and the

Raipur warehouse in Bankura have been particularly successful. It would be advisable to increase the number of these as funds permit. On the other hand, it must be acknowledged that where the people are accustomed to a high strength of liquor the contract system provides a machinery for trying to disabuse them of this taste. It is true that efforts so far have not been very successful in most districts, but the process must be a gradual one, and the increase in the consumption of 50° U.-P. in more than one district, where the people were accustomed to much stronger liquor, is encouraging. Incidentally the revenue has largely increased, though this is not the main object of the system.

* * * * * *

Total number of licenses and revenue.

27. The number of licenses for the sale of country spirit (distillery, outstill and contract liquor) was 3,039 against 3,060 in the previous year, shewing a decrease of 21. There was a decrease especially in Sambalpur, where formerly the right to sell liquor within a limited area was leased out to a vendor, who set up a main outstill in a central position and supplied liquor to between one to four branch shops. Taking these outstills and branch shops together, a decrease of 47 was effected during the year. The total revenue was Rs. 94,01,075 against Rs. 86,91,369, shewing an increase of Rs. 7,09,706.

Sites.

28. In Darbhanga one and in Sambalpur two outstills were removed in deference to public opinion. In Midnapore, Murshidabad, Patna, Gaya, Saran, Muzaffarpur and Monghyr several distillery, tari and pachwai shops were removed to unobjectionable sites. In Ranchi 32 and in Hazaribagh 30 outstills have since the close of the year been removed from bazars and *hâts*.

Indian Excise Committee.

29. The Resolutions of the Government of India on Chapters III to VI, X, XI and XII of the Report of Indian Excise Committee relating to the consumption of country spirit, the methods by which its production and taxation should be controlled, the disposal of licenses for retail vend, the number, location and licensing of liquor shops and the conditions under which liquor should be sold were received during the year. The following measures have been taken in consequence:—

(1) *Extension of distillery areas.*—The outstills in Manbhum and in the jungly parts of Bankura were abolished and the contract supply system was introduced. Since the close of the year, the distillery areas in Muzaffarpur, Bhagalpur and Monghyr have been extended to 439,495 and 179 square miles, respectively, and a portion of the Ranchi district has been made a distillery area.

(2) *Prohibition of the sale of liquor to children or to drunken persons by the holders of outstill licenses.*—There is already a condition forbidding the sale of liquor to children under 14 years of age. The sale of liquor to drunken persons was prohibited.

(3) *Reduction in the number of distillers.*—The distilleries in the Patna Division and Monghyr and Bhagalpur were leased to single distillers. Since the close of the year, the distilleries in the Dumka and Godda subdivisions of the Sonthal Parganas have also been settled with single distillers. The number of distillers in the Russa Distillery in the 24-Parganas was reduced from 19 to 8 and the wholesale price of liquor was fixed throughout the year, with a view to place the business in respectable hands and to improve the methods of manufacture. The 8 distillers have been forbidden to hold retail shops in Calcutta.

(4) *Enhancement of rates of duty.*—The rates of duty in contract areas were revised during the year. The rate of duty in Calcutta has been raised from Rs. 5 to Rs. 5-10 per gallon L.-P., and in the Dumka and Godda subdivisions of the district of the Sonthal Parganas from Rs. 2 to Rs. 2-8 a gallon L.-P. from the 1st April 1908. In Patna, Gaya, Muzaffarpur, Darbhanga, Saran and Champaran, the rate of duty in the urban areas has been raised from Rs. 2 to Rs. 2-8 per gallon L.-P., the existing rate of duty, viz., Rs. 2 per gallon L.-P., being retained in the rural areas. In Sambalpur the duty has been rasied from Re. 1-4 to Re. 1-14 a gallon L.-P. from the 1st July 1908 to check increased consumption.

(5) *Annual Excise Settlements.*—Orders were issued that the annual settlement of country spirit shops should be conducted by the Collector in person.

(6) *Appointment of a local Committee in Calcutta.*—A special Committee was appointed at the end of 1907 to examine certain questions connected with the liquor trade in Calcutta. This Committee sat throughout the cold weather and submitted a report towards the close of the year. Their recommendations and the action taken by Government will be more properly dealt with in the Administration Report for the current year.

(7) A report on the action to be taken on the Resolution of the Government of India on Chapters XI and XII of the Indian Excise Committee's Report was submitted at the end of March 1908.

Convictions for drunkenness and action taken against licensees for permitting it.

30. In Burdwan, Hooghly and Sambalpur drunkenness is reported to have increased. In Burdwan the number of convictions was 247 against 170 in the previous year, and in Hooghly 473 against 357. Convictions for drunkenness form of course no criterion of the actual prevalence of drunkenness, for the institution of these cases is usually determined by several other considerations, but in Sambalpur, though convictions only rose from 6 to 17, it seems practically certain that there was an increase of drunkenness within the distillery areas due to the cheaper price of liquor. The price and the duty have been raised since the close of the year. No action was taken against licensed vendors for permitting drunkenness in their premises except in Midnapore, where a tari vendor was convicted for allowing drunkenness in his shop. In the Sonthal Parganas a country spirit vendor received a warning.

Drunkenness in Ranchi.

31. During the year complaints were received of drunkenness in Ranchi, and to check this it was decided that a distillery should be erected in Ranchi town, and the thanas of Ranchi, with its outposts Armanjhi and Angora, and Silli should be brought under the distillery system. Seven outstills in remote parts of the district have also been closed.

Extension of the Contract Supply System.

32. The Contract Supply System will be extended to the districts of Monghyr, Bhagalpur and Purnea from the 1st April 1909.

SECTION III.—COUNTRY RUM.

* * * * * *

License fees.

34. The receipts from license fees amounted to Rs. 17,140 against Rs. 16,087 in the previous year, showing an increase of Rs. 1,053. The increase was due to the fact that one of the four rum shops in Calcutta had been closed for a considerable portion of the previous year.

Source of supply.

35. Rum was supplied from the Rosa distillery in the United Provinces, from several distilleries in the Madras Presidency and from the distillery at Konnagar.

* * * * * *

The consumption of Shajehanpur and Konnagar rum increased by 2,368 and 2,811 gallons L.-P., respectively, while Madras rum declined by 3,876 gallons. The place of Madras rum has been largely taken by the contract spirit received from that province. The net increase in consumption was 1,092 gallons L.-P. This increase is small compared with the decrease of 12,623 gallons in 1906-07. Of the total quantity imported 7,483 gallons were issued duty-free on account of Government.

* * * * * *

Rum shops in Calcutta.

39. The suggestion of the Indian Excise Committee to close all the rum shops in Calcutta came under the consideration of the Calcutta Committee. There are at present 4 rum shops in Calcutta. The Committee supported the recommendation of their abolition as rum shops, but raised the question whether

they might be required for the sale of foreign liquor. Government has since the close of the year decided to close all these as rum shops, but to license two of them for the "on" sale of imported liquor.

SECTION IV.—IMPORTED LIQUOR.

Licenses.

40. The total number of licenses issued for the sale of imported liquor was 526 against 556 in the preceding year, shewing a decrease of 30. Most of the shops which were abolished were situated in the Burdwan and Presidency Divisions.

Revenue.

41. The total receipts, which were derived from license fees alone, amounted to Rs. 2,68,288 against Rs. 3,00,058 in the previous year, a decrease of Rs. 31,770.

* * * * * *

SECTION VI.—TARI.

Statistics.

49. The total number of licenses issued for the sale of fermented and fresh tari was 12,651 against 13,214 and the total receipts were Rs. 11,82 201 against Rs. 11,35,070 in the previous year. There was a decrease of 563 in the number of licenses and an increase of Rs. 47,131 in revenue.

* * * * * *

The receipts from fermented tari amounted to Rs. 11,79,461 against Rs. 11,32,158 in the previous year, shewing an increase of Rs. 47,303. The largest increase was in the 24-Parganas, Rs. 10,253, which is due to better settlements. The seven districts of the Patna Division with Monghyr and Bhagalpur contributed Rs. 7,44,376 or nearly 63 per cent of the total revenue. In these districts the evils noticed in previous reports still exist, but a distinct progress is manifest in the administration of the tari revenue with the reduction of shops. Previously the shops had practically no monopoly value, but though exactions on the *Pasis* are still made by the zamindars, the license fees are now every year advancing.

* * * * * *

SECTION VII.—PACHWAI.

Statistics.

55. The total number of licenses issued for the retail sale and home-brewing of pachwai was 10,879 against 10,723 in the previous year, shewing an increase of 156. The receipts rose from Rs. 6,06,877 to Rs. 6,15,945 or by Rs. 9,068.

* * * * * *

The revenue increased from Rs. 5,83,448 to Rs. 5,93,732 or by Rs. 10,284.

* * * * * *

Licenses for home-brewing.

57. The number of licenses increased from 9,043 to 9,163, but the revenue decreased from Rs. 23,429 to Rs. 22,213. In the 24-Parganas the issue of pachwai home-brewing licenses and collection of pachwai fees in the Sunderbans portion of the 24-Parganas had been transferred in the previous year to the Salt Department. There was a decrease of Rs. 1,987, but Rs. 1,738 of this is due to the fact that the collections made by the Salt Department were credited to the wrong head. In Purnea there was an increase in consequence of more accurate information having been obtained about the number of Sonthals in the district.

* * * * * *

SECTION IX.—GANJA.

Retail licenses.

66. The number of licenses issued for the retail sale of ganja was 2,040 against 2,026 in the previous year, showing an increase of 14.

* * * * * *

Consumption and export of duty-paid ganja.

68. As in previous years, ganja was consumed in every district in the Province. Excluding exports of duty-paid ganja beyond the province, the actual sales were largest in Calcutta (479 maunds). The consumption was also considerable in Shahabad (202 maunds), Monghyr (196 maunds), the 24-Parganas (188 maunds), Bhagalpur (181 maunds) and Purnea (181 maunds).

* * * * * *

Total revenue.

69. The total receipts amounted to Rs. 26,37,531 against Rs. 26,73,926 in the previous year, the decrease being Rs. 36,395. The decrease was most marked in Calcutta (Rs. 49,419), which was due to diminished exports to London and Mauritius.

Incidence of taxation.

70. The incidence of license fees per seer was 8·7 and of duty 10·8, giving a total taxation of Rs. 19·5, the figures for the previous year being Rs. 8·8, Rs. 10·8 and Rs. 19·6 respectively. The incidence of license fees on consumption was high in Nadia (Rs. 20 a seer), and also in the districts of Khulna, Burdwan, Birbhum, Singhbhum, Bankura, Hooghly, and the Sonthal Parganas, where it varied from Rs. 11 to Rs. 15 a seer. The duty receipts form only 55 per cent. of the total ganja revenue.

* * * * * *

SECTION XIII.—OPIUM.

Licenses for retail sale.

88. The total number of licenses issued for the retail vend of opium was 1,339 against 1,313 in the previous year, shewing an increase of 26. Ten new shops in Shahabad, 6 in Patna, 5 in Jessore and 5 in Sambalpur were opened to meet local demand and to check illicit practices. Seven shops in Balasore were closed with the object of restricting consumption.

* * * * * *

License fees.

91. The revenue from license fees rose from Rs. 6,20,655 to Rs. 6,22,531 or by Rs. 1,876.

* * * * * *

Consumption and duty.

92. The quantity of opium sold was 2,430 maunds 31 seers, against 2,122 maunds 10 seers in the previous year, an increase of 308 maunds 21 seers.

* * * * * *

Mr. Baboneau, the Superintendent of Excise Revenue, Calcutta, makes the following remarks about the Calcutta figures:—

"There has been an almost phenomenal increase in the consumption, to which the large increase in the revenue is due. The consumption of opium has shown a steadily increasing expansion for the past four years. The almost unprecedented increase (193 maunds 31 seers) of the past year, following, as it does, an increase of 22 maunds 7 seers of the preceding year, leaves no room for doubt that this result is mainly due to the activity of smuggling operations in Rangoon and Burma generally. These results may be said to bear eloquent testimony to the fundamental principle of excise administration recognised from earliest times that taxation and repression when carried beyond a certain point invariably lead to the graver evil of systematic law-breaking which illicit practices engender.

Mr. Baboneau calculates the profits on a smuggled seer of opium at Rs. 50 at the least, so that 10 to 15 maunds landed in the year would mean a profit of Rs. 20,000 to Rs. 30,000.

* * * * * *

The question of what measures can be adopted to check smuggling to Burma has been carefully investigated since the close of the year and is now under consideration.

* * * * * *

Total receipts.

93. The total receipts amounted to Rs. 26,19,207 against Rs. 23,51,682, showing an increase of Rs. 2,67,525, Rs. 1,876 from license fees and Rs. 2,65,649 from duty.

* * * * * *

SECTION XIV—COCAINE.

98. The total number of licenses issued was 245 against 227 in the previous year; the receipts from license fees amounted to Rs. 248 against Rs. 233.

Licenses and revenue.

99. Permission to import cocaine through channels other than the Post Office was granted during the year to 9 medical firms in Calcutta, 1 in Patna, 2 in Kurseong, 1 Medical Mission in Hazaribagh and to Civil Sugeons of districts for the sake of the charitable dispensaries under their control. The question of slightly enlarging the list is under consideration.

Imports.

100. In Calcutta the various restrictions that have been placed on the import, sale, transport and private possession of the drug have checked the illicit trade to a considerable extent, and the traders have, the Superintendent of Excise Revenue reports, been compelled to supply an adulterated article to their customers. The drug appears now chiefly to be smuggled into Calcutta by lascars on board the vessels trading between Europe and India, who have plenty of opportunity to elude the examination of the Customs officers. Mr. Baboneau considers, however, that such imports can hardly support the illicit trade to any appreciable extent. Outside Calcutta the cocaine habit is reported as present, though decreasing, in the towns of Patna, Muzaffarpur, Monghyr and Bhagalpur.

Abuses.

* * * * * *

101. Under Government Notification No. 737S.R., dated the 17th December 1907, novocaine was declared to be an intoxicating drug, and its import, sale, etc., were placed under the same restrictions as cocaine.

Novocaine.

* * * * * *

SECTION XV.—OFFENCES AGAINST THE EXCISE AND OPIUM LAWS.

103. The number of persons arrested for offences against Excise and Opium Laws was 3,045 against 2,873 in the previous year, showing an increase of 172. * *

Arrests and convictions.

104. The number of persons arrested by Excise Officers increased from 2,255 to 2,365 or by 110, and those by other officers from 618 to 680 or by 62. Excise Officers obtained convictions in 90·2 per cent. of the cases sent up by them and other officers in 84·4. * *

Work of Excise and other officers.

* * * * * *

107. During the year the fines imposed and realised amounted respectively to Rs. 61,750 and Rs. 43,163 against Rs. 51,226 and Rs. 42,885 in the previous year, the percentage of realisation being 69·9 against 83·7 in previous year. The total amount distributed as rewards was Rs. 47,784 or 77·4 per cent. of the fines imposed against Rs. 45,604 or 89·02 per cent. in 1906-07. Out of Rs. 47,784, Rs. 21,893 or 45·8 per cent. was paid to excise officers, Rs. 10,567 or 22·1 per cent. to officers other than excise and Rs. 15,324 or 32·06 per cent. to informers and others. Rewards were generally paid promptly.

Fines and rewards.

* * * * * *

WEATHER AND CROP REPORT.

For the week ending the 21st September 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches.			
1	BURDWAN ...	0·69	7⅓	7⅓	Weather seasonable. Rainfall at Kalna 3·04 inches, at Katwa 0·43 and at Raniganj nil. Harvesting of jute and *aus* paddy going on. Condition of standing crops good. Cattle-disease reported from Jamalpur thana. Fodder and water sufficient.
2	BIRBHUM ...	0·43	7¼	7¼	Weather seasonable. Rainfall at Rampur Hât 0·14 inch. Weeding finished. Fodder and water sufficient. Common rice selling at 7¾ seers per rupee at Rampur Hât.
3	BANKURA ...	1·21	7¾	7¾	Weather seasonable. Rainfall at Vishnupur 2·51 inches. Harvesting of *aus* paddy commenced in places. Prospects of winter rice good. Persons gratuitously relieved—218 men, 672 women and 206 children—total 1,096. People attending six test works—724 men, 458 women and 28 children—total 1,210—on the 18th September. Fodder and water sufficient. Condition of agricultural stock fair. Common rice selling at 6 to 7½ seers per rupee in the affected tracts.
4	MIDNAPORE .	1·79	6	6	Rainfall at Contai 1·42, at Tamluk 1·05 and at Ghatal 0·44 inch. Transplantation of winter rice over. Sowings of early cotton finished. Harvesting of *aus* paddy in progress. Condition of winter rice good. Prospects of autumn rice, *bhadoi* crops, *til*, jute and sugarcane generally good. Common rice selling at 8 seers per rupee at Contai, 7½ seers at Tamluk and 8½ seers at Ghatal.
5	HOOGHLY ...	3·16	6½	6½	Weather seasonable. Rainfall in the district general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of winter paddy, jute and sugarcane fair. Steeping of jute continuing. Lands being ploughed for cultivation of potato in Singur. Fodder and water sufficient. No cattle disease.
6	HOWRAH ...	2·37	6½	6½	Weather unsettled. Transplantation of paddy completed in Sadar and nearly so in Uluberia. Some low lands in both the subdivisions remaining uncultivated owing to defective drainage. Harvesting of jute and early rice begun in places. Prospects of jute very poor; that of rice only fair. No cattle-disease. Fodder and water sufficient. Common rice selling at 6½ seers per rupee at Uluberia. No fluctuation in prices, during the week.
7	24-PARGANAS .	2·55	6¼	6	Weather seasonable. Rainfall sufficient everywhere. Condition of jute fair. Paddy damaged by heavy rain in Magrahat, Fulta, Vishnupur and Jaynagar thanas. Common rice selling at 6¼ seers per rupee at Barasat, 6½ seers at Basirhat, 7 seers at Diamond Harbour and 6½ seers at Barrackpore.
8	NADIA ...	0·14	8¼*	8	Rainfall at Ranaghat 3·58, at Chuadanga 2·66, inches and at Meherpur nil. Prospects of standing crops fair; that of jute not good. Harvesting of *aus* paddy and jute continuing. Sowing of *kalai* and *rabi* crops going on in Meherpur subdivision. Prices of staple food-grains falling. Stocks of food-grains barely sufficient. No further apprehension of famine. Condition of cattle fair. Fodder and water sufficient. 531 men on test works on 14th September. No gratuitous relief given.

* New *aus* rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	0·14	7	7	Weather still hot and occasionally cloudy. Rainfall at Lalbagh nil, at Kandi 0·17 and at Jangipur 0·09 inch. Harvesting of *bhadoi* crops over. Prospects of *aman* paddy favourable. Condition of jute and sugarcane fair except in the Kandi subdivision. Fodder and water sufficient. No cattle-disease.
10	JESSORE ...	0·30	8½	8	Rainfall at Jhenidah 0·12, at Magura 2·86, at Narail 1·41 and at Bangaon 3·13 inches. Weather seasonable. Rainfall general. Harvesting of *aus* paddy and jute going on. More rain wanted for *aman* paddy. Prospects of jute not favourable. No cattle-disease. Condition of agricultural stock good. High prices continuing. 915 persons given gratuitous relief. Fodder and water sufficient.
11	KHULNA ...	...	8½	8	Weather hot. Rainfall general. Prices of staple food-crops almost stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy still continuing. More rain urgently wanted. No apprehension of famine at present. Prospects of standing crops fair. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	Nil	{ 7¼ 12*	7 12* }	Weather hot and dry. Transplantation of *aghani* paddy not begun for want of rain; seedlings being cut for fodder. Harvesting of *bhadoi* crops continuing. Sugarcane doing well. Lands being prepared for *rabi* sowings. Prices almost stationary. Food-stocks being supplemented from outside. No cattle-disease. Fodder and water available.
13	GAYA ...	0·51	{ 7¼† 11*	8⅜ 11* }	Weather hot and occasionally cloudy. Prospects of sugarcane good. Harvesting of *bhadoi* crops continuing. Rain badly wanted for paddy transplantation in certain parts of the Jehanabad and Aurangabad subdivisions. Condition of standing paddy fair. Prices almost stationary, Fodder and water for cattle sufficient. No cattle-disease.
14	SHAHABAD ...	Nil	{ 8¼ 10½*	8	Harvesting of *bhadoi* crops continuing. Sugarcane doing well. Transplantation of paddy finished. Rain urgently wanted for standing crops. Prices of food-grains stationary. Food-stocks under normal, but sufficient if not exported. Condition of agricultural stock normal. Fodder and water sufficient. Cattle-disease reported from a village in the Barahpur thana.
15	SARAN ...	0·32	{ 8¼ 12½*	8½ 12* }	Weather hot. *Bhadoi* crops ripening. Prices of food-crops fallen slightly. A west wind throughout the week undoing the good done by the heavy rain between 6th and 8th September. Food-stock resources external. Condition of agricultural stock good. Cattle-disease reported in one village in Ekma thana. Fodder and water sufficient.

* The figures indicate the price of maize in seers per rupee.
† Burma rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice in seers, per rupee. This week.	Previous week.	Character of the weather, and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
16	CHAMPARAN ...	Nil	$7\frac{1}{2}$ $11\frac{1}{2}$*	$7\frac{1}{4}$ $10\frac{1}{2}$*	Weather bright and hot. Rainfall at Bettiah 0·03 inch. Harvesting of *bhadoi* crops and maize in progress. Condition of jute and sugarcane fair. Ploughing for *rabi* crops begun. Rain urgently wanted. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
17	MUZAFFARPUR	0·07	8 $11\frac{1}{2}$*	8 11*	Weather hot and at times cloudy. Rainfall nil at Sitamarhi and Hajipur. Heavy rain urgently wanted. Harvesting of *makai* and *marua* continuing. Common rice and maize selling at $7\frac{1}{2}$ and 12 seers a rupee, respectively, at Sitamarhi, and at $7\frac{1}{4}$ and 12 seers a rupee, respectively, at Hajipur. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
18	DARBHANGA ...	Nil	$7\frac{1}{2}$ 11*	7 11*	Weather hot and occasionally cloudy. No rain during the week. Rain urgently wanted everywhere. *Bhadoi* crops being harvested at places. Paddy crops withering for want of rain. Scarcity apprehended in Roserha and Bahera thanas of the Sadar sub-division. Some test-works being opened in Singhia outpost of the Roserha thana. Stocks of food-grains sufficient. No cattle-disease reported. Fodder and water available.
19	MONGHYR ...	Nil	$6\frac{1}{2}$ 12*	$6\frac{3}{4}$ 11*	Weather very hot during the day and very often cloudy without rain. Harvesting of *bhadoi* crops commenced in several places. Want of rain badly felt for the paddy crops. Prices of *makai* still falling. Condition of agricultural stock good. No cattle-disease reported. Fodder and water sufficient.
20	BHAGALPUR ...	0·12	$8\frac{3}{16}$ $12\frac{3}{8}$*	$8\frac{3}{16}$ $11\frac{3}{8}$*	Weather hot and sometimes cloudy. Rainfall at Banka 0·03, at Supaul 0·81 inch, and at Madhipura nil. More rain wanted throughout the district for preserving *aghani* paddy and for moisture for *rabi* crops. Harvesting of *marua* and *makai* going on. Outturn of both the crops poor. Prospects of jute fair. Sugarcane doing well in Banka. In the case of the failure of *hathiya* rains distress apprehended very fast. Cattle-disease reported from Madhipura. Prices rising in Madhipura; stationary elsewhere.
21	PURNEA ...	0·54	$7\frac{1}{2}$	7	Weather hot. Harvesting of jute and *bhadoi* paddy continuing. Condition of jute fair. Transplanting of *aghani* paddy progressing slowly. Prospects of standing crops fair. Stocks of food-grains and agricultural stock adequate. Fodder and water sufficient. Cattle-disease reported from two villages in the Gopalpur thana. Common rice selling at $6\frac{1}{4}$ seers a rupee at Kishanganj and at 8 seers at Araria.

* The figures indicate the price of maize in seers per rupee

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers per rupee. This week.	Price of common rice, in seers per rupee. Previous week.	Character of the weather, and state and prospects of the crops, etc.

		Inches			
22	DARJEELING ...	0·93	7 11*	7 11*	Rainfall at Siliguri 3 70 inches. Weather seasonable. Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi* paddy being sown and being harvested in some places. Winter rice and *bara marua* growing well. Terai—Transplantation of winter rice still going on. *Bhadoi* rice and jute being harvested. Prospects of jute poor. Stocks of food-grains sufficient. Agricultural stock in good condition.
23	SONTHAL PARGANAS.	1·71	$8\frac{1}{4}$† 16*	8† $16\frac{1}{2}$*	Rainfall at Deoghur 0 09, at Godda 0·03 at Jamtara 1·09, at Pakour 1·09 and at Rajmahal 0·15 inch. More rain wanted in Godda and Rajmahal, where standing crops suffering from drought. Prospects elsewhere good. Jute being cut and steeped. Prices of staple food-grains stationary. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Fodder and water sufficient. Burma rice selling at $8\frac{1}{4}$ seers a rupee at Deoghur and at 8 seers a rupee at Jamtara.
24	CUTTACK ...	5 04	$7\frac{7}{8}$	$6\frac{7}{8}$	Rainfall general. *Biali* paddy, *mandia* and jute being cut and harvested. *Saradh* paddy, sugarcane and cotton growing. Condition of cattle generally good. Fodder and water sufficient. 624 men, 1,529 women and 2,893 children—total 5,046—given gratuitous relief. 50 men, 150 women and 195 children—total 395—on test-works.
25	BALASORE ...	0·21	8	$8\frac{1}{2}$	Weather sultry. Rainfall at Bhadrak 2·68 inches. Harvesting of *bhadoi* paddy and jute continuing. Prospects of jute fair. Weeding of *saradh* paddy continuing. Vegetables and sugarcane thriving. Winter rice entirely destroyed by floods in low lands of thanas Dhamnagar and Chandbali. Scarcity existing in some parts of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas. Stocks of food-grains insufficient. Fodder (except in flood-affected areas) and water sufficient. Common rice selling at $7\frac{1}{2}$ seers per rupee at Bhadrak. 462 men, 2,782 women and 3,918 children—total 7,162—at Bhadrak, and 140 men, 566 women and 693 children—total 1,399—at Sadar receiving gratuitous relief. Test-works closed.
26	ANGUL ...	2·37	6	6	Weather seasonable. Rainfall at Phulbani 2 80 inches. Harvesting of millets and *bhadoi* paddy and sowing of *rabi* crops continuing. Condition of agricultural stock fair. Cheapest rice selling at $7\frac{1}{2}$ seers per rupee in the Khondmals. Persons on gratuitous relief—109 men, 282 women and 705 children—total 1,096—in Angul, and 117 men, 154 women and 66 children—total 337—in the Khondmals. Persons on test-works—419 men, 134 women and 102 children—total 655—in Angul, and 499 men, 86 women and 82 children—total 667—in the Khondmals.
27	PURI ...	2·62	$6\frac{3}{16}$	$6\frac{5}{16}$	Rainfall at Khurda 4·05 inches. Transplanting and weeding of *saradh* paddy continuing. *Biali* paddy and *mandia* ripening. Sugarcane and *arhar* growing well. Vegetables doing well. Common rice selling at $7\frac{3}{16}$ seers per rupee at Khurda subdivision. Number of persons attending test-works—men 185, women 81 and children 203—total 469. Persons on gratuitous relief—men 452, women 1,452 and children 1,287—total 3,191.

Slight rain one day in the week. Transplantation of paddy plants completed in all States. Weeding continuing in some States. Sowing of *tilli* in progress. Standing crops in good condition. Sugarcane and cotton doing well. Harvesting of early rice continuing. Fodder and water sufficient and also the agricultural stock except in Narsingpur and Pal Lahera. Price of rice fallen in Keonjhar, Hindol, Boad, Rairakhol, Mayurbhanj and Nayagarh and stationary in other States.

* The report is for the week ending the 13th September 1908.

GENERAL SUMMARY.—The rainfall during the week was general but moderate except in Bihar, where the weather was hot and cloudy with a few light showers West winds are causing damage in Saran and the paddy crop is withering in Darbhanga. More rain is urgently wanted throughout Bihar for the standing crops and especially for the newly transplanted paddy. Harvesting of jute and other *bhadoi* crops and weeding of paddy continues. Sugarcane is still doing well. Prospects of *aman* paddy are fair except in the unirrigated tracts of Bihar, where transplantation could not be done for want of sufficient rain. Prices have risen in Gaya, Saran, Champaran, Monghyr, Balasore, Puri and Ranchi, and have fallen in most districts of the Presidency Division as well as in Patna, Shahabad, Darbhanga, Purnea, the Sonthal Parganas, Cuttack, Hazaribagh and Palamau. Stocks of food-grains are insufficient in Balasore and Palamau. Scarcity is apprehended in parts of Darbhanga. The supply of fodder and water is sufficient. Cattle-disease is reported from Burdwan, Shahabad, Saran, Bhagalpur, Purnea and Hazaribagh. Gratuitous relief was given to 24,634 persons, of whom 18,231 are in Orissa. Test works in Bankura, Nadia, Cuttack, Angul, Puri and Ranchi were attended by 4,710 persons. The number of persons on famine relief works in Ranchi was 594.

The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 13th to 19th September 1908	2·46
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·42
The total fall from 1st January to 19th September 1908	77·09
The average fall of the corresponding period for 24 years, Surveyor-General's Office	56·10

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain; t, thunder; g, dark, gloomy; <, lightning; K, thunderstorm; /, strong wind.

RESOLUTION ON THE EMBANKMENT AND DRAINAGE REPORTS FOR THE YEAR 1907-08.

No. 3617*I*.

Government of Bengal.

IRRIGATION DEPARTMENT.

IRRIGATION.

Dated Calcutta, the 28th September 1908.

RESOLUTION.

READ—

The Embankment and Drainage Reports for the year 1907-08.

A summary of the expenditure incurred on works and repairs (exclusive of book charges for establishment and tools and plant) during the year on embankments and drainage works in Bengal is given in the following table:—

	1907-08. Rs.
I.—Embankments—	
Class A.—Government embankments in Orissa	88,661
Class B.—Schedule D and other Government embankments ...	3,16,540
Class C.—Maintained by Government under contract with zamindars	71,857
Class D.—Maintained by Government with an annual apportionment of charges on estates benefited	13,027
II.—Works undertaken under the provisions of the Drainage Act, VI (B.C.) of 1880	15,156
III.—Works undertaken under the provisions of the Sanitary Drainage Act, VIII (B.C.) of 1895	3,64,153
IV.—Drainage works carried out under the provisions of the Embankment Act, II (B.C.) of 1882	57,697
V.—Drainage works maintained at the cost of Government, but not under the provisions of any Act	17,221
Total ...	9,43,812

2. *Lengths of embankments and areas protected.*—The lengths of embankments in each class and the areas to which they give protection are shown below. The embankments generally are effective against moderate floods, but in many places they are overtopped or breached during very high floods—

Circle.	Class.	Length.		Areas protected.
		Miles.	Feet.	Acres.
Orissa ...	A ...	516	3,791	644,691*
	B ...	314	2,784	446,880
	C ...	6	1,146	44,800
	D ...	Nil		Nil
	Total ...	837	2,441	1,136,371
South-Western ...	A ...	Nil		Nil
	B ...	759	375	2,922,989
	C ...	236	1,014	252,646
	D ...	14	3,216	84,051
	Total ...	1,009	4,605	3,259,686
Gandak ...	A	Nil		Nil
	B ...	"		"
	C ...	234	100	4,039,680
	D	53	3,190	196,320
	Total ...	287	3,290	4,236,000
Northern ...	A ...	Nil		Nil
	B ...	"†		"
	C ...	"		"
	D ...	6	1,694	17,042
	Total ...	6	1,694	17,042
Abstract ...	A ...	516	3,791	644,691
	B ...	1,073	3,159	3,369,869
	C ...	476	2,260	4,337,126
	D ...	74	2,820	297,413
	Total ...	2,141	1,470	8,649,099

* In addition to this area, 540,000 acres are efficiently protected by the flood banks of the Orissa Canals, the total length of which is 294 miles and 1,547 feet.

† 1,631 feet of spur embankments, Panar river of which the length after the flood season of 1907-08 was 1,335 feet were maintained during the year at Government expense.

In the South-Western Circle a length of 3 miles 3,418 feet in Schedule D. embankment 88 was abandoned during the year, and a length of 6 miles 1,760 feet was added to class D embankments owing to the construction of the Peali left embankment. There was, therefore, a net increase of 2 miles and 3,622 feet in the length of embankments in that circle. In the Gandak Circle there has been a decrease of 2 miles and 4,830 feet in the length of class D embankments. There has been no change in the lengths of embankments in the other circles.

3. *Floods.*—In the Orissa Circle the floods in the rivers Brahmini, Byturni and Kopali were the highest yet recorded. Much damage was done to the agricultural embankments and to Ranges II and III of the High Level Canal. Crops were destroyed in the areas not protected by canal embankments, and many huts collapsed. The floods in the Salindi, Matai and Subarnarekha rivers were also very high. The flood in the Mahanadi was a moderate one.

In the South-Western Circle there was a high flood in the Damodar river. The gauge at Edilpur on 3rd September 1907 was 1 foot 4 inches above the previous recorded maximum. The Cossye river was also in high flood. At Panchkura the level recorded on the 2nd September 1907 was 94·50, which

was 1·20 feet higher than the maximum recorded level of 1898. The Bhagirathi river was in moderate flood on the 27th August 1907 when the Berhampore gauge stood at 4·73 below the highest recorded flood level of 14th August 1890.

In the Gandak Circle the floods were of an ordinary nature. The highest flood in the Gandak river, which occurred on 21st July 1907, rose to 240·00. This was 3·50 below the highest recorded level of 15th August 1903. On the River Ganges the flood level at Bazitpur on 23rd August 1907 stood at 141·80, the reading in the previous year being 143·90. The floods in the Bagmati river were also moderate. The highest level was 181·42 at Belahia on 6th September 1907 and 173·43 at Kodliaghat on 21st July, against 187·32 and 176·37 respectively recorded in the previous year.

4. *Breaches.*—In the Orissa Circle altogether 298 breaches occurred during the year, viz., 124 in the Akhoyapada-Jajpur Division, 33 in the Brahmini-Byturni Division, 11 in the Mahanadi Division, and 130 in the Balasore Division. The total length of breaches was 4 miles and 787 feet. In addition the Orissa Trunk Road between the Byturni and Salindi rivers was breached in two places for a total length of 250 feet. The flood in the Brahmini river nearly overtopped the flood bank of the Pattamundi Canal, necessitating the raising of that bank to 3 feet above the flood level for future safety. The Charigong Tie bund, the Utikan and Damarpur embankments in the Brahmini-Byturni Division and the Jamkunda embankment in the Balasore Division as also several agricultural embankments in the Akhoyapada-Jajpur Division were overtopped and considerably damaged. The weir across the Janardan Ghai, which had nearly been completed, was seriously injured. The damage done to embankments in the Mahanadi and Akhoyapada-Jajpur Divisions has since been made good.

In the South-Western Circle 222 breaches occurred in the Schedule D embankments and 13 in the *takavi* embankments. Of these, 52 occurred in the embankments on the left bank of the Selye, 58 in the Panna circuit, 39 in the Ghatal circuit, 20 in the Sheikpur circuit and 30 in the Chetua circuit. The total expenditure incurred during the year in closing breaches and in making good special damage caused by flood was Rs. 94,851, against Rs. 41,669 in the previous year, and a considerable further outlay will be incurred in 1908-09. Both at Hooghly Point and Diamond-Harbour in the Hooghly estuary damage was done to the laterite revetments by the cyclone of the 25th June 1907. There were no breaches in the embankments in the Gandak and Northern Circles.

5. *Surveys and Investigations.*—In the Orissa Circle plans and estimate were prepared for extending embankment No. 55 B in the Brahmini-Byturni Division. Longitudinal sections were prepared of the Utikan and Aul embankments. In the Akhoyapada-Jajpur Division levels and sections of some of the agricultural embankments were taken. Surveys were made to determine the cost of raising certain low portions of the Argowal circuit embankment. Surveys and investigations were completed in respect to a proposed embankment on the left bank of the Subarnarekha. An estimate for this has been prepared, and it will be placed before the local Embankment Committee for consideration. Surveys of the Bichitrapur Government estate in the Balasore district to ascertain the locality of bunds permissible in the tidal portion of the estate were also completed during the year.

In the South-Western Circle surveys were made of some portions of the *takavi* embankments, where the Cossye river had badly encroached. A survey was made and longitudinal and cross sections were taken for certain retired lines in the Chetua circuit embankment and in the Darkeswar right and left embankments. A survey was made of the abandoned Bhagirathi embankment to ascertain the area of surplus land available for disposal. A complete survey was also made for the drainage of the town of Berhampur and improvement of the Gobra Nala in the district of Murshidabad.

In the Gandak Circle check levels were taken of the Saran embankment. Levels were also taken during the year 1907-08 along the whole length of the Tirhut embankment to obtain more correct values for the datum blocks and bench-marks. Longitudinal and cross sections were taken of the Bya outer and inner channels.

6. *Original works.*—The outlay of the year (without charges for establishment and tools and plant) under this head amounts to Rs. 90,088 distributed over the different classes of embankments as under:—

		1907-08.	1906-07.
		Rs.	Rs.
Class A	... ...	35,623	11,195
Do. B	... ...	53,390	29,918
Do. C	... ...	1,075	1,167
Do. D	... ...	...	...
Total	...	90,088	42,280

The more important works were as under:—

In the Orissa Circle the work in connection with the construction of three permanent escapes in the Dya left embankment at an estimated cost of Rs. 39,362 was approaching completion, the outlay of the year being Rs. 20,463. Eighty per cent. of the work for the improvement of the channel of the South Kania river was done during the year at an outlay of Rs. 4,582.

In the South-Western Circle the raising of the crest of the embankment on the left bank of the Hooghly near Diamond Harbour was completed. The total expenditure on this work has been Rs. 51,201, the outlay of the year being Rs. 10,465.

During the year 1907-08 the private embankment in the Begusarai subdivision of the Monghyr district, generally known as the Gupta bund, was taken charge of and is to be strengthened and maintained by the officers of Government under the provisions of the Act. An estimate amounting to Rs. 88,422 was also approved to meet the probable cost of the work.

No original works were carried out in the Gandak Circle.

7. *Ordinary repairs.*—The expenditure on repairs (without book charges for establishment and tools and plant) aggregated Rs. 3,99,497, which is distributed under the different classes of embankments as follows:—

		1907-08.	1906-07.
		Rs.	Rs.
Class A	... ...	53,038	24,805
Do. B	... ...	2,63,150	2,17,378
Do. C	... ...	70,282	61,418
Do. D	... ...	13,027	12,988
Total	...	3,99,497	3,16,589

The expenditure on repairs to the Orissa embankments was Rs. 53,038, against Rs. 24,805 in the previous year. The excess was almost entirely due to repairs to the damage caused by the very high floods in the Brahmini and Byturni rivers. The total cost of repairs to the Schedule D embankments (class B) in the Midnapore district, which are in the Orissa Circle, was Rs. 24,260, against Rs. 36,625 in the year 1906-07.

In the South-Western Circle the expenditure on ordinary repairs to Schedule D and other embankments was Rs. 1,01,588, against Rs. 1,09,274 in the previous year. There was a decrease in the districts of Burdwan, Nadia and 24-Parganas, while the expenditure in the other districts was rather greater than that of the previous year.

On (class C) *takavi* embankments under contract in the Midnapore, Muzaffarpur, Saran and Champaran districts, a sum of Rs. 70,282 was expended during the year as compared with the contract provision of Rs. 1,05,070. The outlay incurred on the maintenance and special repairs of the Gandak embankments was Rs. 39,230, against Rs. 35,996 in the preceding year. The expenditure on repairs to the Midnapore embankments of this class in the Cossye and Balasore Divisions was Rs. 31,052, against Rs. 25,422 during the previous year.

On (class D) *takavi* embankments with an annual apportionment of actual cost, the outlay incurred on repairs was Rs. 13,027, against Rs. 12,988 in the previous year.

8. *Retired lines.*—In the Orissa Circle the amount expended in constructing retired lines of embankments, including under this head slope-cutting, which is an alternative measure, was Rs. 1,509, against Rs. 3,722 in the previous year. In the South-Western Circle the cost of constructing retired lines in the Hooghly, Midnapore, Murshidabad and 24-Parganas districts was Rs. 41,495, against Rs. 28,674 in the previous year. The increase took place chiefly in the Midnapore and Murshidabad districts, while there was a decrease in the Hooghly and 24-Parganas districts. No retired lines were constructed in the district of Burdwan. In the Gandak Circle a sum of Rs. 4,000 was expended in constructing retired lines in the Saran embankment. No retired lines were constructed in the Northern Circle.

9. *Protection of River Banks.*—In the Orissa Circle the total outlay incurred on repairs to revetments and other works for the protection of the river banks was Rs. 13,707, against Rs. 1,035 in the preceding year. The expenditure in 1907-08 includes Rs. 8,031 spent on repairs to the weir across the Janardan Ghai on the Brahmini river. The expenditure on similar works in the South-Western and Gandak Circles was respectively Rs. 21,634 and Rs. 2,037.

10. *Financial.*—The actual outlay during the year on the Orissa embankments (class A) maintained as agricultural works, exclusive of charges for establishment and tools and plant was Rs. 53,038, against Rs. 24,805 in the previous year, the average rate per mile being Rs. 103. The expenditure on class B Government embankments was Rs. 2,63,150, against Rs. 2,17,378 in the year before, the average rate being Rs. 245, against Rs. 201 in 1906-07.

Government has contracted to maintain certain embankments on behalf of the persons benefited at a fixed annual charge in the districts of Saran, Champaran, Muzaffarpur and Midnapore. The following statement shows the expenditure incurred on these embankments as compared with the contract payments:—

Year.	Midnapore district.		Saran district.		Champaran district.		Muzaffarpur district.	
	Maintenance charge.	Contract amount.	Maintenance charge.	Contract amount.	Maintenance charge.	Contract amount.	Maintenance charge.	Contract amount.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1900-01 ...	...	...	14,704	23,900	...	...	...	...
1901-02 ...	31,100	56,291	5,949	23,900	...	...	...	...
1902-03 ...	26,899	56,291	12,853	23,900	...	...	...	...

1907-08 ...	31,052	50,755	16,658	23,900	14,936	20,000	7,636	10,41[illegible]
Total ...	2,41,169	3,71,893	1,52,996	1,91,200	77,150	1,00,000	50,364	52,[illegible]75

NOTE.—The figures in this table under column "Maintenance charge" represent the cash outlay on maintenance and repairs without any book charges for Establishment and tools and plant.

11. *Works undertaken under the provisions of the Drainage Act, VI (B. C.) of 1880.*—The Dankuni, Howrah, Rajapur and Barajolla drainage works in the Hooghly district, in charge of the Executive Engineer, Northern Drainage and Embankment Division, were maintained in good order during the year. The cost of their upkeep compared with the previous year is shown below:—

	1906-07.	1907-08.
	Rs.	Rs.
Dankuni	258	2,682
Howrah	862	3,724
Rajapur ... ... } Barajolla ... ... }	9,604	11,716
Total ...	10,724	18,122

The receipts from those works hitherto credited to the Civil Department have been transferred to this Department from 1st April 1907.

12. *Works undertaken under the provisions of the Sanitary Drainage Act, VIII (B.C.) of 1895.*—The only work which has as yet been taken up under this Act is that known as the Magra Hât drainage scheme in the 24-Parganas district. It is designed to drain the swamps around Magra Hât in the central portion of the tracts enclosed by the 24-Parganas embankments. The swamps are mainly those along the Kaorapukur khal near Hotar, those drained by the Surjipur sluice, those at Joynagar and along the Srichandra and Sangrampur khals as well as north of the railway near Sangrampur and at Dhosa and Hobka. A sum of Rs. 3,76,955 was expended during the year on works, establishment and tools and plant. On the whole fair progress has been made with the scheme.

13. *Drainage works carried out under the provisions of the Embankment Act, II (B.C.) of 1882.*—In the South-Western Circle the expenditure during the year was Rs. 9,531 principally on the construction of sluices at Lowjola and Lokenathpur in the Murshidabad district and at Topeikhal and Khoniady in the district of Midnapore. In the Orissa Circle the Argowal drainage project was in progress during the year. The sluice was practically completed and about three-fourths of the earthwork done. The total expenditure to end of the year amounted to Rs. 89,059 for works only, the outlay of the year being Rs. 46,570. This scheme is now in operation.

Maintenance and repairs.—The Charrial khal drainage scheme was maintained in good condition at a cost of Rs. 1,596 as compared with Rs. 1,902 in the previous year. A large number of sluices in the Schedule D Embankments are maintained under the provisions of the Act at the cost of the estates benefited.

14. *Drainage works carried out at the cost of Government, but not under the provisions of any Act.*—Work in connection with the improvement of the drainage channel from Daudpur to Utterpadima, known as the Tajpur drainage project, in the Contai subdivision of the Balasore Division, was completed during the year.

The Bullee Bhil drainage works in the 24-Parganas district were efficiently maintained at a cost of Rs. 3,969. In the Midnapore district the Balliaghai main and branch drains, which are used both for drainage and navigation, were kept open to traffic throughout the year. The condition of the main drain has deteriorated, and an estimate for silt clearing is under preparation. The khas tahsil khals in charge of this Department in the same district were cleared of silt at a cost of Rs. 9,637.

ORDER—Ordered that a copy of the Resolution and of its Appendices (A and B) be published in the Supplement to the *Calcutta Gazette* and submitted to the Government of India, Public Works Department, for information.

Ordered also that copies of the Resolution and of its Appendices (A and B) be forwarded to the Revenue and Financial Departments of this Government; the Secretary to the Board of Revenue, Lower Provinces; the Commissioners of the Presidency, Burdwan, Patna, Bhagalpur, Chota Nagpur and Orissa Divisions; the Director-General of Commercial Intelligence; the Superintending Engineers, Orissa, South-Western, Sone, Gandak and Northern Circles; and the Examiner, Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary to the Government of Bengal.

GOVERNMENT OF BENGAL, IRRIGATION DEPARTMENT.

	1,35,989 (2 + 3)				99,938 (6 + 7)				

(a) The difference of Rs 95 between the figures in this column and those in column 2 of the last year's statement is due to the transfer of certain estates to other districts with effect from the 1st April 1906, the abatement of revenue sanctioned by the Board on account of land acquired by Bengal and North-Western Railway, the exemption of the estate from the payment of the cess and the decrease and increase in the land revenue *jama* of certain estates on account of resettlement.

(b) The difference of Rs. 72 between the figures in column 10 of the previous year's statement and those in column 3 of this statement is due to the transfer of certain estates to other districts; the abatement of revenue of certain estates on account of land acquired by the Bengal and North-Western Railway and the decrease and increase in the land revenue *jama* of certain estates on account of resettlement.

(c) The total advance payment at the close of the year is Rs. 6,730, which includes Rs. 3,161 shown in this column. Rupees 45 on account of interest was realized during the year.

(d) The difference of Rs. 44 between the figures in column 3 of this statement and those in column 10 of the last year's statement is due to the partition of estate and omission of fractions of a rupee.

(e) Out of the balance of Rs. 6,080 a sum of Rs. 1,049 has been collected since the close of the year, and for the remainder action under certificate procedure will be taken in due course.

(f) The difference of Rs 1,019 between the figures in column 10 of the previous year's statement and those in column 3 of the present statement is due to the transfer of several items from "Advances" to the "Arrear due."

(g) The balance has been arrived at by the deduction of Rs. 1,052 due from Government on account of *khas mahals* benefited by the embankment.

PRELIMINARY FORECAST OF *BHADOI* CROPS, BENGAL, 1908.

THE following note is published for general information.

F. W. DUKE,
Offg. Chief Secy. to the Govt. of Bengal.

The 28th September 1908.

DEPARTMENT OF AGRICULTURE, BENGAL.

PRELIMINARY FORECAST OF THE BHADOI CROPS OF BENGAL, 1908.

(On an average of five years ending 1906-07, the area under autumn rice in the territory to which this forecast relates has represented some 6·0 per cent. of the total area under this crop in British India).

Explanatory.—Autumn rice is the chief *bhadoi* crop of this Province. It occupies 50 per cent. of the total area under all *bhadoi* crops. Maize and millets are to be found chiefly in Bihar and Chota Nagpur.

Character of the season.—Sowings this year were normal in Orissa and Chota Nagpur and late in Lower Bengal and Bihar. Climatic conditions were not favourable except in Chota Nagpur and Orissa where the prospects are hopeful. In Lower Bengal, as well as in Bihar, the rainfall was short in the early part of the season, and later on damage was done by heavy rain in Lower Bengal and by drought in Bihar. The recent rain has improved prospects in Bihar. Floods did damage in Midnapore, Shahabad, Cuttack and Balasore and insect pests in Burdwan, Bankura, Hooghly, the 24-Parganas, Nadia and Cuttack. The present season has not been a very favourable one.

Area sown.—The area sown this year has been estimated at 8,724,900 acres against 9,251,000 acres last year. The normal area is estimated at 9,462,900 acres.

Outturn.—Sambalpur estimates more than a normal crop (105 per cent.). Balasore, Ranchi, and Singhbhum estimate 100 per cent. Khulna and Palamau report 97 and 91 per cent., while Burdwan, Darjeeling and Hazaribagh report 88, 80 and 85 per cent. In 13 districts, the outturn estimated by

local officers varies from 70 to 79 per cent.; three districts report 60 to 68 per cent. crops, and two districts, Darbhanga and Bhagalpur report 55 and 54 per cent. crops. In Murshidabad (49 per cent.), Monghyr (47 per cent.), Nadia (46 per cent.) Purnea (45 per cent.), Muzaffarpur (41 per cent.) and Patna (38 per cent.) the outturn is poor.

According to the estimates of the District Officers, the outturn of the different kinds of *bhadoi* crops for the Province, as a whole, amounts to 68 per cent. of the normal.

CALCUTTA, W. R. GOURLAY,

The 18th September 1908. *Offg. Director of Agriculture, Bengal.*

Preliminary forecast of the Bhadoi Crops, 1908

District.	Total area of district, in acres.	Total area of district estimated to be under cultivation, in acres.	Names of *bhadoi* crops.	Approximate normal area under each specified *bhadoi* crop, in acres.	Approximate area last year (1907) under each specified *bhadoi* crop, in acres.	Estimated area this year (1908) under each specified *bhadoi* crop, in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)?	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under *bhadoi* crop during the cadastral survey.	Date at which the sowing of the crops was begun this year.	A brief statement regarding the weather and general condition of the crops and whether the date of sowing was this year early, normal or late.	Remarks by the Department of Agriculture, Bengal.

			Other *bhadoi* food-crops (*e.g.*, vegetables).	2,300	2,300	2,200	62	98						
			Other *bhadoi* non-food-crops ...	10,000	8,000	8,200	67	99						
			Total ...	181,900	147,700	152,400	71	88	53,749		...			

District.	Total area of district, in acres.	Total area of district estimated to be under cultivation, in acres.	Names of *bhadoi* crops.	Approximate normal area under each specified *bhadoi* crop, in acres.	Approximate area last year (1907) under each specified *bhadoi* crop, in acres.	Estimated area this year (1908) under each specified *bhadoi* crop in acres.	Taking 100 to represent the normal outturn, how much represented the outturn last year (1907)?	Taking 100 to represent the normal outturn, how much will represent this year's outturn (1908)?	Figures from the Cadastral Survey. Total area of the district which has been cadastrally surveyed.	Figures from the Cadastral Survey. Years during which the cadastral survey took place.	Figures from the Cadastral Survey. Area found under each specified *bhadoi* crop during the cadastral survey.	Date at which the sowing of the crops was begun this year.	A brief statement regarding the weather and general condition of the crops and whether the date of sowing was this year early, normal or late.	Remarks by the Department of Agriculture, Bengal.
1	2	3	4	5	6	7	8	9	10	11	12	13	13	14
24-Parganas ...	3,100,833	1,079,700	*Autumn* rice	73,400	64,900	57,900	98	76	...	...	...	April to June.	The normal area under autumn rice has been revised. The increase in the area sown with autumn rice and other *bhadoi* cereals is due to the fact that on account of the falling off in the demand of jute, the ryots have reduced the area under jute and increased that under autumn rice in the Basirhat Subdivision. Want of seasonable rain, deficient rain in the beginning and latter part of the season and heavy downpour of rain in the middle of the season in all the Subdivisions of the district and the appearance of insect pests which caused great damage to crops, account for the lower outturn There was no rain up to 15th June in Diamond Harbour and cultivation of crops suffered. Sowings were late this year.	
			Other *bhadoi* cereals and *bhadoi* pulses.	3,600	1,300	1,800	96	84						
			Other *bhadoi* food-crops (*e.g.*, vegetables).	5,600	3,300	3,100	83	77

WEATHER AND CROP REPORT.

For the week ending the 28th September 1908.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee.		Character of the weather, and state and prospects of the crops, etc.
			This week.	Previous week.	
1	2	3	4	5	6
		Inches			
1	BURDWAN ...	0·37	7½	7½	Weather seasonable. Rainfall at Kalna nil, at Katwa 0·02 and at Raniganj 3·58 inches. Rain needed generally. Harvesting of *aus* paddy and of jute continuing. No cattle-disease. Fodder and water sufficient. Condition of standing crops good.
2	BIRBHUM ...	1·57	7½	7¼	Weather seasonable. Rainfall at Rampur Hât 0·14 inch. Prospects of paddy fair. Rice selling at 7½ seers per rupee at Rampur Hât. Fodder and water sufficient.
3	BANKURA ...	1·35	8	7¾	Weather seasonable. Rainfall at Vishnupur 2·51 inches. Harvesting of *aus* paddy going on. Prospects of winter rice good Persons gratuitously relieved—217 men, 668 women and 203 children—total 1,088. People attending six test-works—712 men, 259 women and 20 children—total 991—on the 25th September. Relief operations finally closed on that day. Fodder and water sufficient. Condition of agricultural stock fair.
4	MIDNAPORE	1·83	6	6	Rainfall at Contai 1 69, at Tamluk 1·44 and at Ghatal 0·37 inch. Condition and prospects of winter rice good. Steeping of jute going on. Prospects of autumn rice and *bhadoi til* fair. Scarcity apprehended at Contai. Stocks of food-grains sufficient. Common rice selling at 8 seers per rupee at Contai and Ghatal, and at 7½ seers at Tamluk.
5	HOOGHLY ...	1·18	6½	6½	Weather seasonable. Rainfall in the district general. Stocks of food-grains sufficient till next harvest. Prices of food-grains stationary. No likelihood of scarcity at present. Prospects of winter paddy and sugarcane fair. Steeping of jute continuing. Fodder and water sufficient. No cattle-disease.
6	HOWRAH ...	0·79	6½	6½	Weather unsettled. Rainfall at Ulubaria 0·74 inch. More rain wanted for standing crops. Prospects of winter rice fairly good but of jute bad. Harvesting of *aus* paddy and jute begun. Fodder and water supply sufficient. No cattle-disease.
7	24-PARGANAS	1 10	6¼	6¼	Weather seasonable. Rainfall sufficient everywhere. Condition of jute fair. Common rice selling at 6¼ seers per rupee at Barasat, at 6½ seers at Basirhat Barrackpore and at 7¼ seers at Diamond Harbour.
8	NADIA ...	0·77	8¼*	8¼*	Rainfall at Ranaghat 0·31, Meherpur 0·49, Chuadanga 0·50 and Kushtia 0·90 inches. Harvesting of *aus* paddy nearly finished; that of jute continuing. Prospects of jute and *aus* paddy fair, and that of *aman* paddy good. Sowings of *rabi* crops commenced. Prices of staple food-grains stationary. Stocks of food-grains sufficient. No further apprehension of famine. Condition of cattle good. Fodder and water sufficient. Some test-works still open. Figures not reported.

* New *aus* rice.

No.	Name of district.	Rainfall at Sadar station.	Price of common rice, in seers, per rupee. This week.	Price of common rice, in seers, per rupee. Previous week.	Character of the weather and state and prospects of the crops, etc.
1	2	3	4	5	6
		Inches.			
9	MURSHIDABAD	0·07	7	7	Weather hot with occasional light showers. Rainfall at Lalbagh 0·15, at Kandi 0·75 inch and at Jangipur nil. More rain wanted in the Kandi and Jangipur subdivisions. Harvesting of *bhadoi* paddy over except in the Jangipur subdivision. Prospects of *aman* paddy good. Condition of jute and sugarcane fair except in the Kandi subdivision. No cattle-disease. Fodder and water sufficient.
10	JESSORE ...	0·81	9	8½	Weather seasonable. Rainfall at Jhenidah 0·12, at Magura 0·21, at Narail 0·02 and at Bangaon 0·26 inches. Rainfall general. More rain urgently wanted for *aman* crops. Harvesting of *aus* paddy and jute going on. Prospects of jute not favourable. Jute being steeped in Bangaon. No cattle-disease. Fodder and water sufficient. Condition of agricultural stock good. 731 persons given gratuitous relief.
11	KHULNA ...	0·93	8	8½	Weather seasonable. Rainfall at Bagirhat 0·22 and at Satkhira 1·21 inches. Rainfall general. Prices of staple food-crops almost stationary. Stocks of food-grains sufficient till next harvest. Transplantation of *aman* paddy still continuing. More rain urgently wanted. No apprehension of famine at present. Prospects of standing crops fair. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
12	PATNA ...	0·83	7½ 12½*	7½ 12*	Weather hot and sometimes cloudy. Some good done to paddy by recent rain. Heavy showers still wanted. Harvesting of *bhadoi* crops continuing. Sugarcane doing well. Lands being prepared for *rabi* sowing. Prices almost stationary. Food-stocks being supplemented by imports from outside. No cattle-disease. Supply of fodder and water sufficient.
13	GAYA ...	0·32	8½† 12½*	7½† 11*	Weather hot and occasionally cloudy. Rainfall at Jahanabad 1·37 inches. Scanty rain in the Sadar and Aurangabad subdivisions. Rainfall at Nawadah nil. Sugarcane doing well. Condition of *aghani* paddy on irrigated areas good; that on high lands on unirrigated areas suffering from want of rain. Much good done by recent rain at Jahanabad. Harvesting of *bhadoi* crops almost finished. Prices fallen at Sadar and risen at Aurangabad; almost stationary elsewhere. Fodder and water for cattle sufficient. No cattle-disease.
14	SHAHABAD ...	0·84	8 11*	8½ 10½*	Rainfall at Buxar 0·93 and at Dehri 0·52 inches. Harvesting of *bhadoi* crops finished. Sugarcane doing well. Rain urgently wanted for standing crops. Prices of food-grains stationary. Food-stocks under the normal, but sufficient if not exported. Condition of agricultural stock normal. Fodder and water sufficient.
15	SARAN ...	1·28	8 13*	8½ 12½*	Weather hot. Rainfall at Siwan 0·65 inch. Rain wanted for paddy. Harvesting of *bhadoi* crops continuing. Price of maize fallen, but of rice stationary. Food-stock resources external. Condition of agricultural stock good. Cattle-disease reported from one village. Fodder and water sufficient.

* The figures indicate the price of maize in seers per rupee.
† Burma rice.

1	2	3	4	5	6
		Inches.			
16	CHAMPARAN ...	Nil	8¼ 12½*	7¼ 11½*	Weather hot and cloudy. Rainfall at Bettiah 0·09 inch. Harvesting of maize and early rice and ploughing for *rabi* crops going on. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient. Jute being cut.
17	MUZAFFARPUR	0·80	8 11½*	8 11½*	Weather hot and occasionally cloudy. Rainfall at Hajipur 1·00 and at Sitamarhi 0·04 inch. Harvesting of *makai* and *marua* continuing. Heavy rain urgently wanted for transplanted paddy. Common rice and *makai* selling at 7½ and 12½ seers per rupee, respectively, at Sitamarhi, and at 7½ and 12 seers a rupee respectively, at Hajipur. Condition of agricultural stock good. No cattle-disease. Fodder and water sufficient.
18	DARBHANGA ...	0·52	8† 11*	7½ 11*	Weather hot and occasionally cloudy. Little rain during the week except in the Mahiuddin Nagar thana of the Samastipur subdivision where a good shower was received. Hathiya rains urgently wanted everywhere for the standing paddy and for *rabi* cultivation. *Bhadoi* crops being harvested at places. Outturn poor. Condition of agricultural stock sufficient. Fodder and water available. Five test-works recently started in Rosera thana Persons attending these works on the 26th instant—men 246, women 489 and children 39—total 774.
19	MONGHYR ...	0·31	6¼ 12*	6¼ 12*	Weather very hot but cooler during the last two days of the week. Harvesting of *bhadoi* crops going on. Paddy suffering for want of rain. Scarcity apprehended Prices of staple food-crops stationary. Cattle-disease reported from the Jamui subdivision. Condition of agricultural stock generally fair. Fodder and water sufficient.
20	BHAGALPUR ...	0·49	7⅜ 12⅜*	8 3/16 12⅜*	Weather cloudy. Rainfall at Banka 1·85, at Madhipura nil and at Supaul 0·14 inches. More rain wanted throughout the district. Transplantation of paddy finished in Banka, where rain fell last week. *Kurthi* and *kalai* very extensively sown. Jute and sugarcane doing well. In the case of the failure of the *hathiya* rain scarcity apprehended soon. Prices almost stationary.
21	PURNEA ...	Nil	7½	7½	Weather hot. Harvesting of *bhadoi* paddy and of jute continuing. Prospects of jute fair. Want of good showers badly felt for the paddy crops. Stocks of food-grains and agricultural stock adequate. Fodder and water sufficient. Cattle-disease reported from Kadwa, Raniganj and Forbesganj thanas. Common rice selling at 6¼ and 8 seers per rupee at Kishanganj and Araria, respectively.

† The figures indicate the price of maize in seers per rupee.

22	DARJEELING ...	Inches 0·14	7 13*	7 11*	Weather seasonable. Rainfall at Siliguri 3·53 inches. Hills—Maize and potatoes being harvested. *Chota marua* and *bhadoi* paddy being harvested. Winter rice and *bara marua* growing well. Terai—Transplantation of winter rice finished. Harvesting of jute and *bhadoi* paddy going on. Condition of jute not very favourable. Prospects of standing crops fair. Stocks of food-grains sufficient at present. Agricultural stock in good condition.
23	SONTHAL PARGANAS.	Nil	$8\frac{5}{8}$† $16\frac{1}{4}$*	$8\frac{1}{4}$† 16*	Rainfall at Deoghur 4·61, Godda 0·25, Jamtara 0·54, Pakour 0·10 and Rajmahal 0·06 inches. More rain wanted in Godda and Rajmahal, where crops are suffering from drought. Prospects everywhere favourable. Jute being steeped. Prices of staple food-grains stationary. Stocks of food-grains likely to last till next harvest. No immediate apprehension of scarcity. Loans being given to poorer cultivators. Fodder and water sufficient. Burma rice selling at 8 seers per rupee at Deoghur and Jamtara.
24	CUTTACK ...	0·38	$7\frac{1}{8}$	$7\frac{1}{8}$	Rainfall general. *Biali* paddy, *mandia* and jute being harvested. *Saradh* paddy, sugarcane and cotton growing well Condition of cattle generally good. Fodder and water sufficient. 478 men, 1,245 women, and 2,507 children—total 4,230—given gratuitous relief on the last day of the week. No test-work.
25	BALASORE ...	•1·11	$8\frac{1}{4}$	8	Weather seasonable. Rainfall at Bhadrak 0·92 inch. Transplanting and weeding of *saradh* paddy and harvesting of *biali* paddy and jute continuing. Prospects of jute fair. Sugarcane and vegetables thriving. Winter rice entirely destroyed by floods in some parts of thanas Dhamnagar, Chandbali and Baliapal, over 150 square miles. On high lands in Bhadrak, damage done varying from 25 to 75 per cent. Scarcity existing in some places of Basudebpur, Dhamnagar, Chandbali, Bhadrak, Baliapal, Basta and Jellasore thanas Stocks of food-grains insufficient. Fodder and water sufficient except in flood-affected areas of Chandbali and Dhamnagar thanas. Common rice selling at 8 seers a rupee at Bhadrak. 450 men, 2,842 women and 3,925 children—total 7,217—at Bhadrak, and 82 men, 473 women and 524 children—total 1,079 at Sadar receiving gratuitous relief. Test-works closed.
26	ANGUL ...	Nil	6	6	Weather seasonable. Rainfall at Phulbani 3·62 inches. Harvesting of *bhadoi* paddy and *mandia* and sowing of *rabi* crops continuing. Condition of agricultural stock fair. Cheapest rice selling at $7\frac{1}{2}$ seers a rupee in the Khondmals. Persons on gratuitous relief—83 men, 172 women and 542 children—total 797—in Angul, and 102 men, 119 women and 48 children—total 269—in the Khondmals. Persons on test-works—422 men, 54 women and 59 children—total 535—in Angul, and 874 men, 119 women and 159 children—total 1,152—in Khondmals.
27	PURI ..	2·10	$6\frac{9}{16}$	$6\frac{9}{16}$	Rainfall at Khurda 4·78 inches. *Saradh* paddy doing well. *Biali* paddy and *mandia* being harvested. Sugarcane and *arhar* growing well. Persons attending test-works—173 men, 77 women and 172 children—total 422. Recipients of gratuitous relief—518 men, 2,061 women and 1,528 children—total 4,107. Owing to *Devi* river floods gratuitous relief largely extended there.

* The figures indicate the price of maize in seers per rupee.

Slight rain for 3 days in the week. Weeding of paddy finished in some States, and continuing still in some. Sowing of *til* and harvesting of early rice in progress. Preparation of lands for sowing winter crops commenced in some States. Standing crops in good condition. Fodder and water sufficient and also the agricultural stock except in Narsingpur and Pal Lahera. Price of rice fallen in Athmallik, Talcher, Bonai, Ranpur, Patna and Athgarh and stationary in other States.

* The report is for the week ending the 19th September 1908.

GENERAL SUMMARY.—During the week under report light rain fell in all the districts except in Purnea where there was no rain. In Puri, Manbhum, Singhbhum and in parts of Burdwan, Bankura, Darjeeling, Darbhanga, the Sonthal Parganas and Angul the fall was fairly moderate. More rain is urgently wanted in Bihar and also in Murshidabad, Jessore and Khulna. Harvesting of the *bhadoi* crops is going on. Preparation of lands for *rabi* crops has commenced in Nadia, Patna and Palamau. Prospects of sugarcane are fair, those of *aman* paddy are also fair except in the unirrigated tracts of Bihar where the rainfall has been deficient and in parts of Balasore where damage has been done by floods. Prices have risen in Khulna, Shahabad, Saran, Bhagalpur and Palamau and have fallen in Bankura, Jessore, Gaya, Champaran, Darbhanga, the Sonthal Parganas, Balasore, Ranchi and Cooch Behar. Stocks of food-grains are still reported to be insufficient in Balasore and Palamau. Scarcity is apprehended in parts of Midnapore and Monghyr. Test-works have recently been opened in Darbhanga. The fodder and water-supply is sufficient. Cattle-disease prevails in Saran, Monghyr, Purnea, Sambalpur, Ranchi and Palamau. Gratuitous relief was given to 21,517 persons, of whom 17,699 are in Orissa. Test-works in Bankura, Darbhanga, Angul, Puri and Ranchi were attended by 4,423 persons.

DEPARTMENT OF AGRICULTURE, BENGAL,
Calcutta, the 29th September 1908.

N. N. BANERJEI,
for *Offg. Director of Agriculture, Bengal.*

IRRIGATION DEPARTMENT, BENGAL.

IRRIGATION OPERATIONS FOR THE OFFICIAL YEAR 1908-09.

Area leased for irrigation up to end of August 1908.

Circle	District.	Canal.	Estimated full discharge.	Average discharge in month.	Discharge utilised.	Approximate area of land irrigated during the year up to the end of the month. 	Inches.
The mean pressure of the seven days	29·711
The average pressure of the corresponding period for 24 years, Surveyor-General's Office	29·707
	Hours.
The total number of hours of bright sunshine	43·8
The maximum possible number of hours of sunshine	84·5
	°
The mean temperature of the seven days	84·4
The average temperature of the corresponding period for 24 years, Surveyor-General's Office	83·0
The extreme variation of temperature	17·0
The maximum temperature	93·6
	Miles.
The highest velocity of the wind in one hour	11
	%
The mean relative humidity	82
The average relative humidity of the corresponding period for 24 years, Surveyor-General's Office	86
	Inches.
The total fall of rain from 20th to 26th September 1908	0·51
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2 36
The total fall from 1st January to 26th September 1908	77·60
The average fall of the corresponding period for 24 years, Surveyor-General's Office	58·46

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain; g, dark, gloomy; t, thunder; <, lightning.
